GENERAL SAFETY NOTES

IMPORTANT SAFETY NOTICE

Proper service and repair is important to the safe, reliable operation of all Philips Consumer Electronics Company** equipment. The service procedures recommended by Philips and described in this service manual are effective methods of performing service operations. Some of these service operations require the use of tools specially designed for the purpose. The special tools should be used when and as recommended.

It is important to note that this manual contains various **CAUTIONS** and **NOTICES** which should be carefully read in order to minimize the risk of personal injury to service personnel. The possibility exists that improper service methods may damage the equipment. It also is important to understand that these **CAUTIONS** and **NOTICES ARE NOT EXHAUSTIVE**. Philips could not possibly know, evaluate and advise the service trade of all conceivable ways in which service might be done or of the possible hazardous consequences of each way. Consequently, Philips has not undertaken any such broad evaluation. Accordingly, a servicer who uses a service procedure or tool which is not recommended by Philips must first satisfy himself thoroughly that neither his safety nor the safe operation of the equipment will be jeopardized by the service method selected.

** Hereafter throughout this manual, Philips Consumer Electronics Company will be referred to as Philips.

WARNING

Critical components having special safety characteristics are identified with a  or "S" by the Ref. No. in the parts list and enclosed within a broken line* (where several critical components are grouped in one area) along with the safety symbol  on the schematics or exploded views. Use of substitute replacement parts which do not have the same specified safety characteristics may create shock, fire, or other hazards. Under no circumstances should the original design be modified or altered without written permission from Philips. Philips assumes no liability, express or implied, arising out of any unauthorized modification of design. Servicer assumes all liability.

- Broken Line _____

SAFETY CHECKS

After the original service problem has been corrected, a complete safety check should be made. Be sure to check over the entire set, not just the areas where you have worked. Some previous servicer may have left an unsafe condition, which could be unknowingly passed on to Your customer. Be sure to check all of the following:

FIRE AND SHOCK HAZARD

IMPLOSION

X-RADIATION

LEAKAGE CURRENT COLD CHECK

LEAKAGE CURRENT HOT CHECK

FIRE AND SHOCK HAZARD

1. Be sure all components are positioned in such a way as to avoid the possibility of adjacent component shorts. This is especially important on those chassis which are transported to and from the service shop.
2. Never release a repaired unit unless all protective devices such as insulators, barriers, covers, strain reliefs, and other hardware have been installed in accordance with the original design.
3. Soldering and wiring must be inspected to locate possible cold solder joints, solder splashes, sharp solder points, frayed leads, pinched leads, or damaged insulation (including the ac cord). Be certain to remove loose solder balls and all other loose foreign particles.
4. Check across-the-line components and other components for physical evidence of damage or deterioration and replace if necessary. Follow original layout, lead length, and dress.
5. No lead or component should touch a receiving tube or a resistor rated at 1 watt or more. Lead tension around protruding metal surfaces or edges must be avoided.
6. Critical components having special safety characteristics are identified with an '**S**' by the Ref. No. in the parts list and enclosed within a broken line* (where several critical components are grouped in one area) along with the safety symbol  on the schematic diagrams and /or exploded views.
7. When servicing any unit, always use a separate isolation transformer for the chassis. Failure to use a separate isolation transformer may expose you to possible shock hazard, and may cause damage to servicing instruments.
8. Many electronic products use a polarized ac line cord (one wide pin on the plug). Defeating this safety feature may create a potential hazard to the servicer and the user. Extension cords which do not incorporate the polarizing feature should never be used.
9. After reassembly of the unit, always perform an [ac leakage test](#) or resistance test from the line cord to all exposed metal parts of the cabinet. Also, check all metal control shafts (with knobs removed), antenna terminals, handles, screws, etc., to be sure the unit may be safely operated without danger of electrical shock.

* **Broken line** _____

IMPLOSION

1. All picture tubes used in current model receivers are equipped with an integral implosion system. Care should always be used, and safety glasses worn, whenever handling any picture tube. Avoid scratching or otherwise damaging the picture tube during installation.
2. Use only replacement tubes specified by the manufacturer.

X-RADIATION

1. Be sure procedures and instructions to all your service personnel cover the subject of X-radiation. Potential sources of X-rays in TV receivers are the picture tube and the high voltage circuits. The basic precaution which must be exercised is to keep the high voltage at the factory recommended level.
2. To avoid possible exposure to X-radiation and electrical shock, only the manufacturer's specified anode connectors must be used.
3. It is essential that the service technician has an accurate HV meter available at all times. The calibration of this meter should be checked periodically against a reference standard.
4. When the HV circuitry is operating properly there is no possibility of an X-radiation problem. High voltage should always be kept at the manufacturer's rated value - no higher - for optimum performance. Every time a color set is serviced, the brightness should be run up and down while monitoring the HV with a meter to be certain that the HV is regulated correctly and does not exceed the specified value. We suggest that you and your technicians review test procedures so that HV and HV regulation are always checked as a standard servicing procedure, and the reason for this prudent routine is clearly understood by everyone. It is important to use an accurate and reliable HV meter. It is recommended that the HV reading be recorded on each customer's invoice, which will demonstrate a proper concern for the customer's safety.
5. When troubleshooting and making test measurements in a receiver with a problem of excessive high voltage, reduce the line voltage by means of a Variac to bring the HV into acceptable limits while troubleshooting. Do not operate the chassis longer than necessary to locate the cause of the excessive HV.
6. New picture tubes are specifically designed to withstand higher operating voltages without creating undesirable X-radiation. It is strongly recommended that any shop test fixture which is to be used with the new higher voltage chassis be equipped with one of the new type tubes designed for this service. Addition of a permanently connected HV meter to the shop test fixture is advisable. The CRT types used in these new sets should never be replaced with any other types, as this may result in excessive X-radiation.
7. It is essential to use the specified picture tube to avoid a possible X-radiation problem.
8. Most TV receivers contain some type of emergency "Hold Down" circuit to prevent HV from rising to excessive levels in the presence of a failure mode. These various circuits should be understood by all technicians servicing them, especially since many hold down circuits are inoperative as long as the receiver performs normally.

LEAKAGE CURRENT COLD CHECK

1. Unplug the ac line cord and connect a jumper between the two prongs of the plug.
2. Turn on the power switch.
3. Measure the resistance value between the jumpered ac plug and all exposed cabinet parts of the receiver, such as screw heads, antennas, and control shafts. When the exposed metallic part has a return path to the chassis, the reading should be between 1 megohm and 5.2 megohms. When the exposed metal does not have a return path to the chassis, the reading must be infinity. Remove the

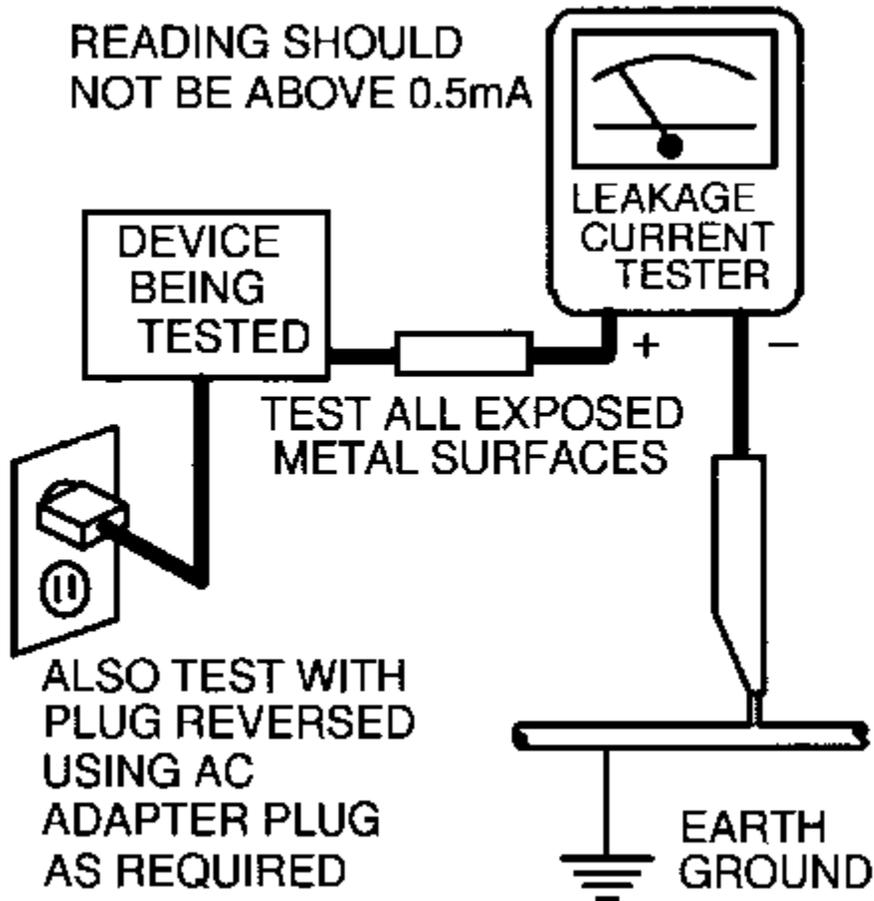

jumper from the ac line cord.

LEAKAGE CURRENT HOT CHECK

1. Do not use an isolation transformer for this test. Plug the completely reassembled receiver directly into the ac outlet.
2. Connect a **1.5k, 10W resistor** paralleled by a **0.15uF. capacitor** between each exposed metallic cabinet part and a **good earth ground** such as a water pipe, as shown below.
3. Use an ac voltmeter with at least 5000 ohms/volt sensitivity to measure the potential across the resistor.
4. **The potential at any point should not exceed 0.75 volts.** A leakage current tester may be used to make this test; leakage current must not exceed 0.5milliamp. If a measurement is outside of the specified limits, there is a possibility of shock hazard. The receiver should be repaired and rechecked before returning it to the customer.
5. **Repeat the above procedure with the ac plug reversed.** (Note: An ac adapter is necessary when a polarized plug is used. Do not defeat the polarizing feature of the plug.)

OR

With the instrument completely reassembled, plug the AC line cord directly into a 120V AC outlet. **(Do not use an isolation transformer during this test.)** Use a leakage current tester or a metering system that complies with American National Standards Institute (ANSI) C101.1 Leakage Current for Appliances and Underwriters Laboratories (UL) 1410, (50.7). **With the instrument AC switch first in the on position and then in the off position, measure from a known earth ground (metal water pipe, conduit, etc.) to all exposed metal parts of the instrument (antennas, handle brackets, metal cabinet, screw heads, metallic overlays, control shafts, etc.), especially any exposed metal parts that offer an electrical return path to the chassis. Any current measured must not exceed 0.5 milliamp.** Reverse the instrument power cord plug in the outlet and repeat the test. See graphic below.

PICTURE TUBE REPLACEMENT

The primary source of X-radiation in this television receiver is the picture tube. The picture tube utilized in this chassis is specially constructed to limit X-radiation emissions. For continued X-radiation protection, the replacement tube must be the same type as the original, including suffix letter, or a Philips approved type.

PARTS REPLACEMENT

Many electrical and mechanical parts in Philips television sets have special safety related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. The use of a substitute part which does not have the same safety characteristics as the Philips recommended replacement part shown in this service manual may create shock, fire, or other hazards

TV SAFETY NOTES

SAFETY CHECKS

PARTS REPLACEMENT

WARNING

Before removing the CRT anode cap, turn the unit **OFF** and short the **HIGH VOLTAGE** to the **CRT DAG** ground.

SERVICE NOTE: The **CRT DAG** is not at chassis ground.

TV-VCR COMBI SAFETY NOTES

IMPORTANT SAFETY PRECAUTIONS

Prior to shipment from the factory, our products are strictly inspected for recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

SAFETY PRECAUTIONS FOR TV CIRCUITS

1. Before returning an instrument to the customer, always make a safety check of the entire instrument, including, but not limited to, the following items:
 - a. Be sure that no built-in protective devices are defective or have been defeated during servicing. (1) Protective shields are provided on this chassis to protect both the technician and the customer. Correctly replace all missing protective shields, including any removed for servicing convenience. (2) When reinstalling the chassis and/or other assembly in the cabinet, be sure to put back in place all protective devices, including but not limited to, nonmetallic control knobs, insulating fishpapers, adjustment and compartment covers/shields, and isolation resistor/capacitor networks. Do not operate this instrument or permit it to be operated without all protective devices correctly installed and functioning. Servicers who defeat safety features or fail to perform safety checks may be liable for any resulting damage.
 - b. Be sure that there are no cabinet openings through which an adult or child might be able to insert their fingers and contact a hazardous voltage. Such openings include, but are not limited to, (1) spacing between the picture tube and the cabinet mask, (2) excessively wide cabinet ventilation slots, and (3) an improperly fitted and/or incorrectly secured cabinet back cover.
 - c. Do a LEAKAGE CURRENT CHECK

ANY MEASUREMENTS NOT WITHIN THE LIMITS SPECIFIED HEREIN INDICATE A POTENTIAL SHOCK HAZARD THAT MUST BE ELIMINATED BEFORE RETURNING THE INSTRUMENT TO THE CUSTOMER

OR BEFORE CONNECTING THE ANTENNA OR ACCESSORIES.

d. **X-Radiation and High Voltage Limits** - Because the picture tube is the primary potential source of X-radiation in solid-state TV receivers, it is specially constructed to prohibit X-radiation emissions. For continued X-radiation protection, the replacement picture tube must be the same type as the original. Also, because the picture tube shields and mounting hardware perform an X-radiation protection function, they must be correctly in place. High voltage must be measured each time servicing is performed that involves B+, horizontal deflection or high voltage. Correct operation of the X-radiation protection circuits also must be reconfirmed each time they are serviced. (X-radiation protection circuits also may be called "horizontal disable" or "hold down.") Read and apply the high voltage limits and, if the chassis is so equipped, the X-radiation protection circuit specifications given on instrument labels and in the **Product Safety & X-Radiation** Warning note on the service data chassis schematic. High voltage is maintained within specified limits by close tolerance safety-related components/adjustments in the high-voltage circuit. If high voltage exceeds specified limits, check each component specified on the chassis schematic and take corrective action.

2. Read and comply with all caution and safety-related notes on or inside the receiver cabinet, on the receiver chassis, or on the picture tube.

3. **Design Alteration Warning** - Do not alter or add to the mechanical or electrical design of this TV receiver. Design alterations and additions, including, but not limited to circuit modifications and the addition of items such as auxiliary audio and/or video output connections, might alter the safety characteristics of this receiver and create a hazard to the user. Any design alterations or additions will void the manufacturer's warranty and may make you, the servicer, responsible for personal injury or property damage resulting therefrom.

4. **Picture Tube Implosion Protection Warning** - The picture tube in this receiver employs integral implosion protection. For continued implosion protection, replace the picture tube only with one of the same type number. Do not remove, install, or otherwise handle the picture tube in any manner without first putting on shatterproof goggles equipped with side shields. People not so equipped must be kept safely away while picture tubes are handled. Keep the picture tube away from your body. Do not handle the picture tube by its neck. Some "in-line" picture tubes are equipped with a permanently attached deflection yoke; because of potential hazard, do not try to remove such "permanently attached" yokes from the picture tube.

5. **Hot Chassis Warning**

a. Some TV receiver chassis are electrically connected directly to one conductor of the ac power cord and may be serviced safely without an isolation transformer only if the ac power plug is inserted so that the chassis is connected to the ground side of the ac power source. To confirm that the ac power plug is inserted correctly, with an ac voltmeter, measure between the chassis and a known earth ground. If a voltage reading in excess of 1.0V is obtained, remove and reinsert the ac power plug in the opposite polarity and again measure the voltage potential between the chassis and a known earth ground.

b. Some TV receiver chassis normally have 85Vac (RMS) between chassis and earth ground regardless of the ac plug polarity. This chassis can be safety-serviced only with an isolation transformer inserted in the power line between the receiver and the ac power source, for both personnel and test equipment protection. Some TV receiver chassis have a secondary ground system in addition to the main chassis ground. This secondary ground system is not isolated from the ac power line. The two ground systems are electrically separated by insulation material that must not be defeated or altered.

6. Observe original lead dress. Take extra care to assure correct lead dress in the following areas: **a.** near sharp edges, **b.** near thermally hot parts - be sure that leads and components do not touch thermally hot parts, **c.** the ac supply, **d.** high voltage, and **e.** antenna wiring. Always inspect in all areas for pinched, out of place, or frayed wiring. Check ac power cord for damage.

7. Components, parts, and/or wiring that appear to have overheated or are otherwise damaged should be replaced with components, parts, or wiring that meet original specifications. Additionally, determine the cause of overheating and/or damage and, if necessary, take corrective action to remove any potential safety hazard.

PRECAUTIONS DURING SERVICE

A. Parts identified by the  symbol are critical for safety. Replace only with part number specified.

B. In addition to safety, other parts and assemblies are specified for conformance with regulations applying to spurious radiation. These must also be replaced only with specified replacements.

Examples: RF converters, RF cables, noise blocking capacitors, and noise blocking filters, etc.

C. Use specified internal wiring. Note especially:

- 1) Wires covered with PVC tubing
- 2) Double insulated wires
- 3) High voltage leads

D. Use specified insulating materials for hazardous live parts. Note especially:

- 1) Insulation Tape
- 2) PVC tubing
- 3) Spacers
- 4) Insulators for transistors

E. When replacing ac primary side components (transformers, power cord, etc.), wrap ends of wires securely about the terminals before soldering.

F. Observe that the wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.)

G. Check that replaced wires do not contact sharp edged or pointed parts.

H. When a power cord has been replaced, check that 10-15 kg of force in any direction will not loosen it.

I. Also check areas surrounding repaired locations.

J. Use care that foreign objects (screws, solder droplets, etc.) do not remain inside the set.

K. Crimp type wire connector

When replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, in order to prevent shock hazards, perform carefully and precisely the following steps.

Replacement procedure

- 1) Remove the old connector by cutting the wires at a point close to the connector. **Important:** Do not re-use a connector (discard it).
- 2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.
- 3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.
- 4) Use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.

L. When connecting or disconnecting the VCR connectors, first, disconnect the ac plug from the ac supply socket.

SAFETY CHECK AFTER SERVICING

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions. Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

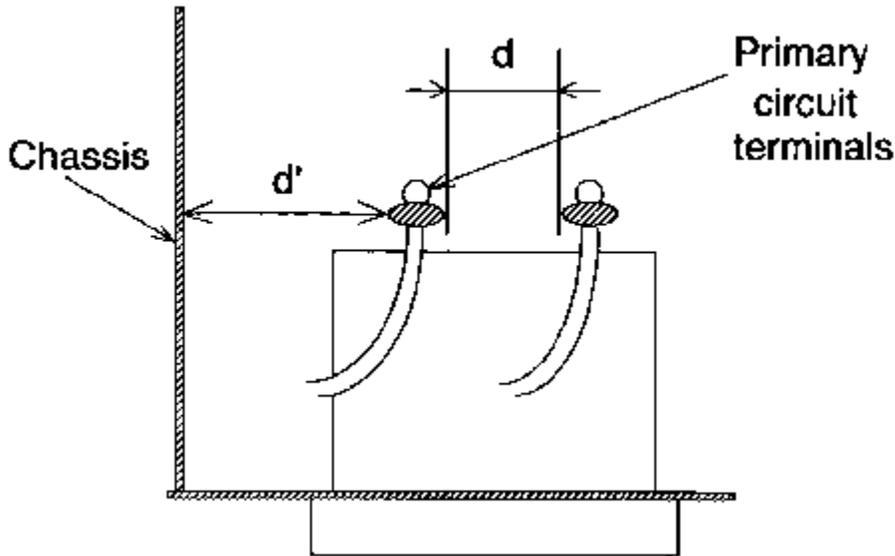

1. Clearance Distance

When replacing primary circuit components, confirm specified clearance distance (d) and (d') between soldered terminals, and between terminals and surrounding metallic parts. (See graphic below)

Table 1 : Ratings for selected area

AC Line Voltage	Region	Clearance Distance (d) (d')
110 to 130 V	USA or CANADA	> 3.2 mm (0.126 inches)

Note: This table is unofficial and for reference only. Be sure to confirm the precise values.

2. LEAKAGE CURRENT CHECKS

VCR SAFETY NOTES

FIRE & SHOCK HAZARD (VCR)

1. Be sure that all components are positioned in such a way to avoid possibility of shorts to adjacent components. This is especially important on those chassis which are transported to and from the repair shop.
2. Always replace all protective devices such as insulators and barriers after working on a set.
3. Check for damaged insulation on wires including the ac cord.
4. Check across-the-line components for damage and replace if necessary.
5. After re-assembly of the unit, always perform an ac leakage test on the exposed metallic parts of the cabinet such as the knobs, antenna terminals, etc. to be sure the set is safe to operate without danger of electrical shock. **Do not use a line isolation transformer during this test.** Use an ac voltmeter having 5000 ohms per volt or more sensitivity in the following manner: Connect a 1500 ohm 10 watt resistor, paralleled by 0.15 MFD ac type capacitor, between a known good earth ground (water pipe, conduit, etc.) and the exposed metallic parts, one at a time. Measure the ac voltage across the combination 1500 ohm resistor and 0.15 MFD capacitor. Reverse the ac plug on the set and repeat ac voltage measurements again for each exposed metallic part. Voltage measured must not exceed 0.6 volts R.M.S. This corresponds to 0.4 milliamp ac. Any value exceeding this limit constitutes a potential shock hazard and must be corrected immediately.

GENERAL

Power Supply-This receiver is designed for operation on 120 Volts, 60Hz alternating current (ac) only. Never connect to a supply having a different frequency or voltage.

IMPORTANT NOTICE

This device employs many circuits, components, and mechanical parts designed for protection against fire, shock and RF interference. For continued safety any servicing should be performed by qualified personnel and exact replacement parts should be used. Under no circumstances should the original design be altered.

PRODUCT SAFETY GUIDELINES FOR ALL PRODUCTS

CAUTION: Do not modify any circuit. Service work should be performed only after you are thoroughly familiar with all of the following safety checks. Risk of potential hazards and injury to the user increases if safety checks are not adhered to.

USE A SEPARATE ISOLATION TRANSFORMER FOR THIS UNIT WHEN SERVICING.

PREVENTION OF ELECTROSTATIC DISCHARGE (ESD)

Some semiconductor solid state devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices, Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by electrostatic discharge (ESD).

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any ESD on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging ESD wrist strap, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static solder removal device. Some solder removal devices not classified as "antistatic (ESD protected)" can generate an electrical charge sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).

7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION : Be sure no power is applied to the chassis or circuit and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your feet from a carpeted floor can generate static electricity (ESD) sufficient to damage an ES device.)

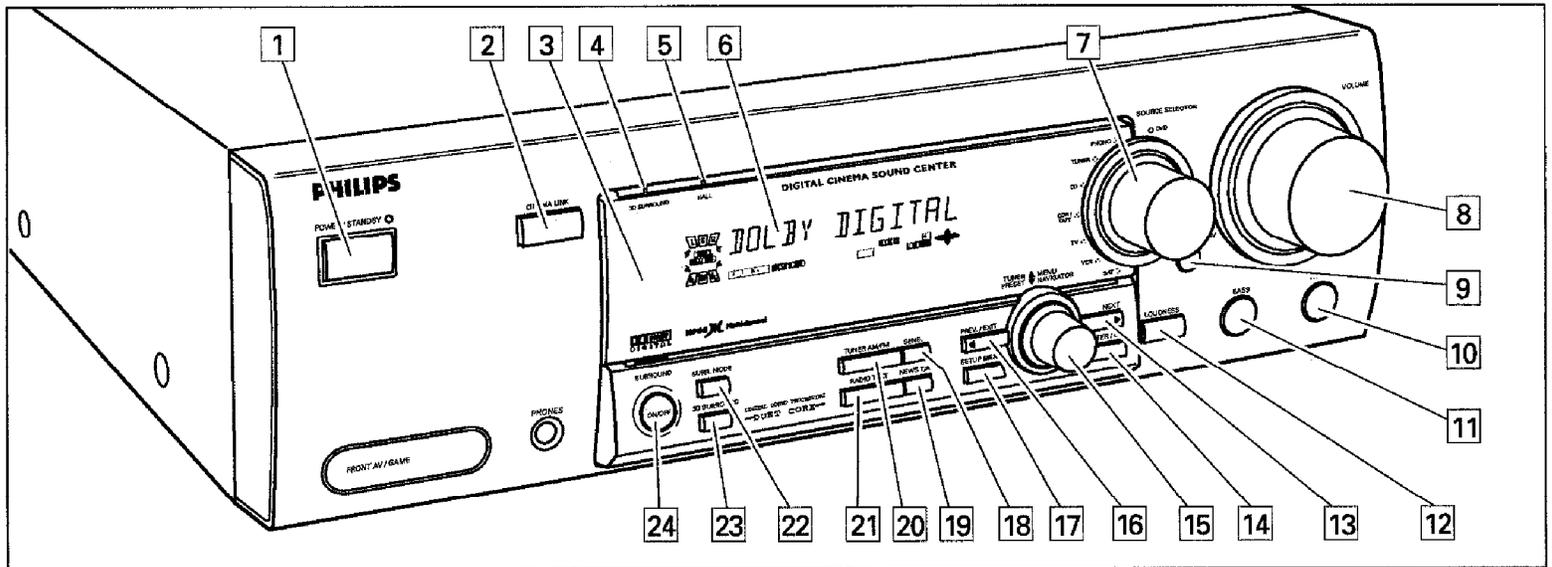

NOTE to CATV system Installer:

This reminder is provided to call the CATV system installer's attention to article 820-22 of the NEC that provides guidelines for proper grounding and, in particular, specifies that the cable ground shall be connected to the grounding system of the building, as close to the point of cable entry as practical.

Digital A/V Surround Receiver

FR960/00/17 FR970/00/01/01B/17
MX975D/21/37

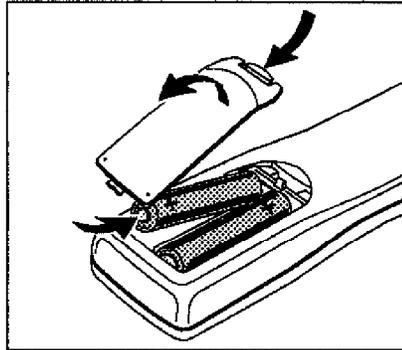

- 1 POWER / STANDBY** Switches the receiver on and off.
- 2 CINEMA LINK** Switches the system control bus between the receiver and the TV on and off.
- 3** Sensor for the infrared remote control.
- 4 3D SURROUND** Control light for virtual 3D surround.
- 5 HALL** Control light for HALL.
- 6** Display
- 7 SOURCE SELECTOR** Selects the different audio and video connectors.
- 8 VOLUME** Increases and decreases the volume level.
- 9 FRONT AV** Selects the FRONT AV / GAME input (FR 970 only).
- 10 TREBLE** Adjusts the treble when used in combination with VOLUME.
- 11 BASS** Adjusts the bass when used in combination with VOLUME.
- 12 LOUDNESS** Switches LOUDNESS on and off.
- 13 NEXT ►** TUNER: searches radio stations. MENU: switches to the next menu level.
- 14 ENTER / OK** Confirms selected menu values.
- 15 TUNER PRESET ◄ MENU NAVIGATOR**
TUNER: switches to the next and previous stored radio station.
MENU: moves upwards and downwards.
- 16 ◀ PREV. / EXIT** TUNER: searches radio stations. MENU: switches to the previous menu level.
- 17 SETUP MENU** Switches the menu on and off.
- 18 SENS.** Switches between low and high tuner sensitivity.
- 19 NEWS/TA** Switches the RDS news and RDS traffic announcement on and off.
- 20 TUNER AM/FM** Switches the wavebands of the tuner.
- 21 RADIO TEXT** Scrolls through the different RDS information.
- 22 SURR. MODE** Switches through the different surround effects.
- 23 3D SURROUND** Switches virtual 3D surround on and off.
- 24 SURROUND ON/OFF** Switches the surround sound on and off.

Remote control usage

Open the battery compartment of the remote control and insert 2 alkaline batteries, type **AA** (R06, UM-3).

Remove batteries if they are flat or the remote control is not going to be used for a long time.

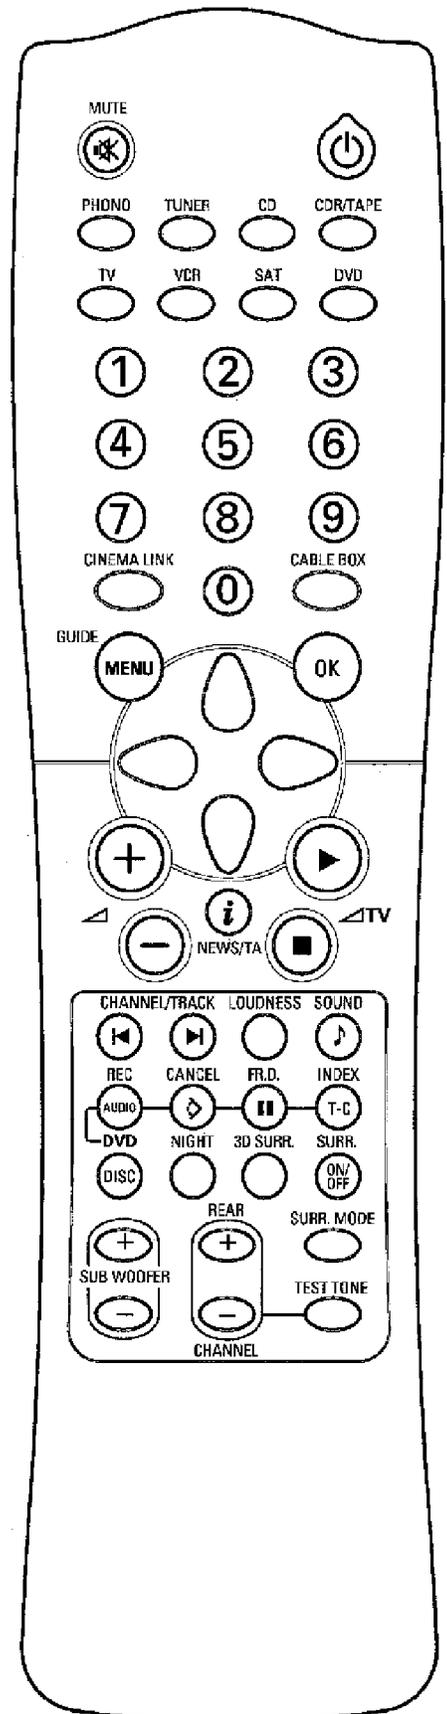

Batteries contain chemical substances, so they should be disposed of properly.

The buttons on the remote control work the same way as the corresponding ones on the receiver.

Important!

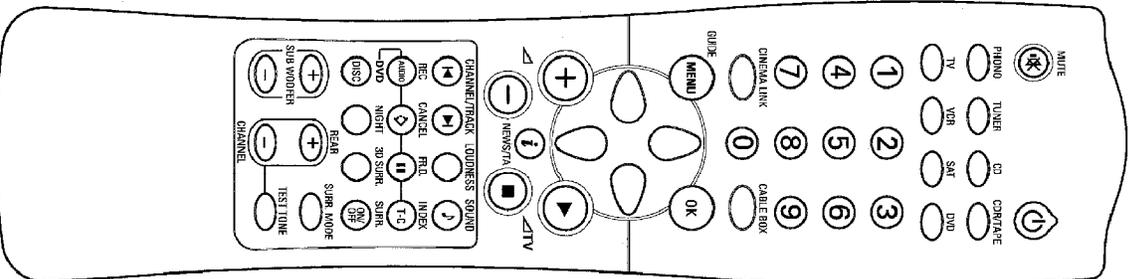

You have to press a source button for longer than 2 seconds to switch the sound source on the receiver. Pressing a source button for less than 2 seconds will only switch the remote control to use the commands for the selected product.

The remote control remains tuned to the selected source until another source button on the remote control is pressed. This enables you to operate additional sources (i. e. winding a tape) without changing the source on the receiver.

Remote control buttons

- MUTE** Mutes the sound of the receiver.
PHONO, TUNER, CD, CDR/TAPE, TV, VCR, SAT, DVD Switches the receiver to standby.
 Switches the remote control to the commands of the different products. Selects the sources if pressed longer than 2 seconds. SAT only works with digital/satellite receivers.
- 1-0** Keys in numbers for tracks, stations or frequencies. Numbers consisting of two figures must be keyed in within 2 seconds.
- CINEMA LINK** Switches the connection between the receiver and the TV on and off.
- CABLE BOX** Without function.
- MENU GUIDE** Switches the menu on and off.
OK Confirms menu options.
- Arrow buttons** **TUNER**: Moves in the menus. Right/left arrows are tuning up/down. **CD, CDR**: Left/right arrows are searching backwards/forwards, up/down arrows are selecting the next/previous track.
- + / -** Increases the receiver volume.
- / + Decreases the receiver volume.
- NEWS/TA** Switches the functions NEWS and TRAFFIC ANNOUNCEMENT on and off.
TV: Switches teletext on and off.
SAT: Switches the information text on and off.
- TV** Increases the TV volume.
CD, CDR, VCR, DVD: Starts playback.
- TV** Decreases the TV volume.
CD, CDR, VCR, DVD: Stops playback.
- CHANNEL/TRACK** Selects the previous preset tuner station.
VCR: Rewinds the tape.
CD, CDR, DVD: Selects the previous track.
TV: Selects the previous channel.
- CHANNEL/TRACK** Selects the next preset tuner station.
VCR: Fast forwards the tape.
CD, CDR, DVD: Selects the next track.
TV: Selects the next channel.
- LOUDNESS** Switches LOUDNESS on and off.
SOUND Scrolls through the different smart sounds.
- REC, DVD AUDIO** **CDR, VCR**: Starts recording. **DVD**: Switches audio tracks.
- CANCEL, DVD** **CD, CDR, SAT, VCR**: Clears a program, cancels selections. **DVD**: Switches the view angle.
- FR.D, DVD** **TUNER**: Switches to FREQUENCY DIRECT. **CD, CDR, VCR, DVD**: Pauses playback.
- INDEX, DVD T-C** **VCR**: Switches the index search on and off.
SAT: Switches the themes on and off.
DVD: Switches between title and chapter.
- DISC** **CD, CDR, DVD-Changers**: Switches to the next disc.
- NIGHT** Switches NIGHT MODE on and off.
- 3D SURR.** Switches virtual 3D surround on and off.
- SURR. ON/OFF** Switches SURROUND SOUND on and off.
- + / - SUBWOOFER** Increases/decreases the subwoofer volume.
- + / - REAR** Increases/decreases the volume of the rear speakers. While test tone is on, the volume of the speakers you are hearing can be increased/decreased with these buttons.
- SURR. MODE** Scrolls through the different surround modes.
- TEST TONE** Switches the test tone on and off. While test tone is on, the volume of the speakers you are hearing can be increased/decreased with **+ / - REAR**.

Programming the universal remote control

You can identify the universal remote control by the inscription **Multibrand/Universal**.

The universal remote control must be programmed to use the codes for your appliances of different brands. This is done by keying in a 4-digit code or by scanning the codes until the correct one is found. We recommend to using the 4-digit code. This method is faster and more reliable. The code scanning method should only be used if you cannot find the code for one of your appliances. The code table can be found at the end of the booklet.

Important!

The buttons of the remote control must be used for programming, not the buttons of the receiver or other appliances.

Programming with the 4-digit code

- 1** Keep the source button for the appliance which should be controlled and  pressed for 3 seconds.
- 2** Key in the 4-digit code for the appliance (codetable at the end of the booklet).

Notes: — If more than 4 digits are entered, the remote control will recognize only the ones keyed in first.

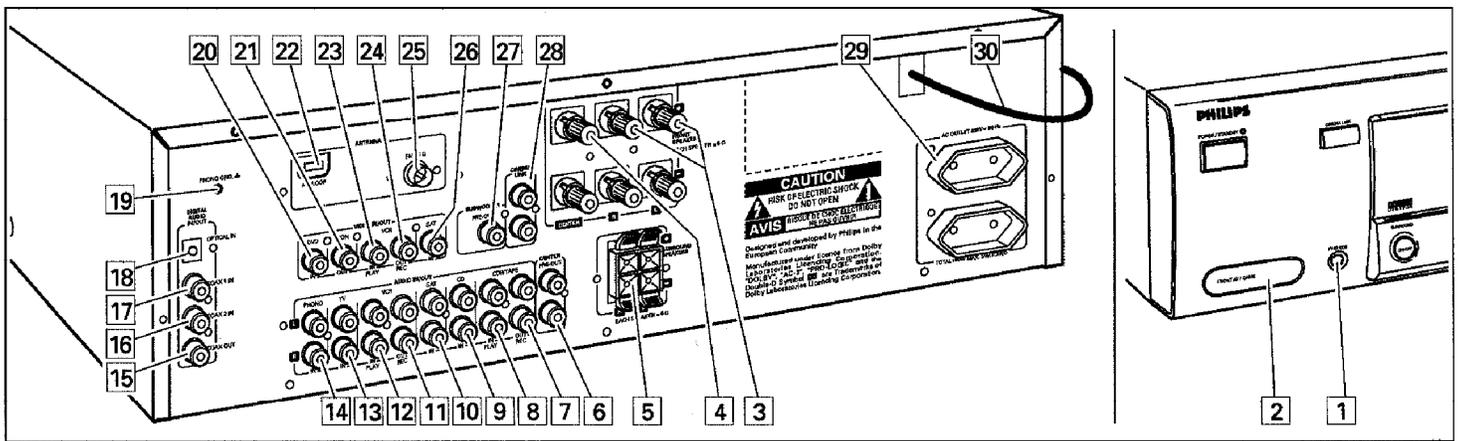

- If you do not key in a code within 30 seconds the remote control will switch off the programming function without changing the code.*

Scanning the codetable

- 1** Switch on the appliance which should be controlled.
 - 2** Keep the source button for the appliance which should be controlled and  pressed for 3 seconds.
 - 3** Press and release  again.
 - The remote control sends the codes for channel up or standby (depending on the selected source) for one brand after the other.
 - 4** As soon as the appliance reacts — switches to the next channel or to standby — press  to confirm the code.
 - The identified code will be used.
- If the set does not react within 2 minutes, the code for this appliance is not stored in the remote control. The code of the remote control will remain unchanged.

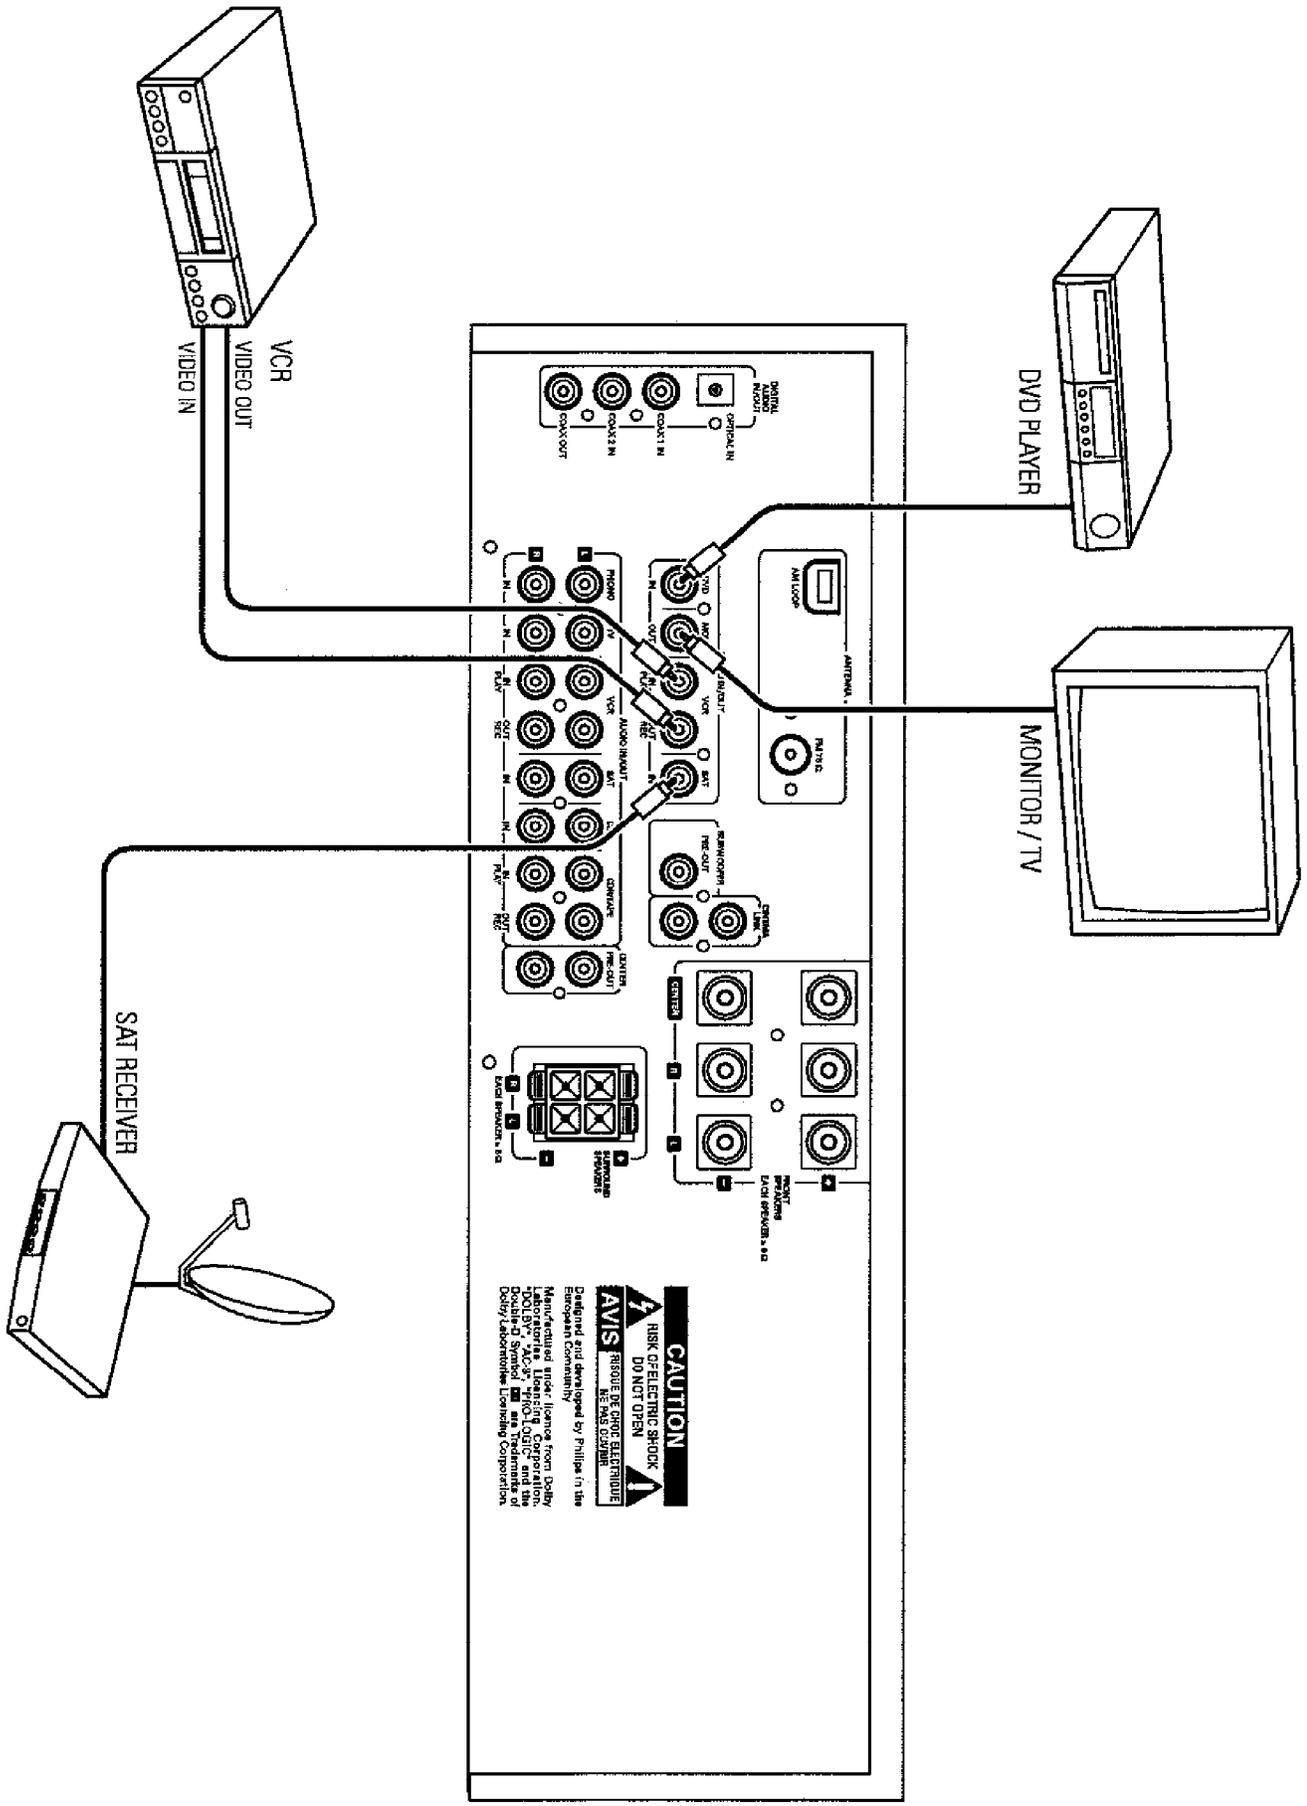

Note: When taking out the batteries of the remote control for more than 1 minute the codes must be reprogrammed.

Once you have found and tested the codes for your various appliances, you may want to write them down.

Connectors	Connectors name	Connect to:
6.3 mm headphone socket at the front	1 PHONES	A headphone with a 6.3 mm plug.
Audio and video inputs at the front (FR 970 only)	2 FRONT AV / GAME	Audio and video out sockets of appliances such as video cameras and game consoles.
FRONT SPEAKERS	3 R, L	Right and left front speaker.
	4 CENTER	Center speaker.
SURROUND SPEAKERS	5 R, L	Right and left surround speaker.
AUDIO IN/OUT	7 CDR/TAPE OUT	Input of a CD recorder or a tape deck.
	8 CDR/TAPE IN	Output of a CD recorder or a tape deck.
	9 CD IN	Output of a CD player.
	10 SAT IN	Output of a satellite system.
	11 VCR OUT	Input of a video recorder.
	12 VCR IN	Output of a video recorder.
	13 TV IN	Output of a TV.
	14 PHONO IN	Output of a turntable.
DIGITAL AUDIO IN/OUT	19 PHONO GND 	Ground cable of a turntable with MM coil.
	15 COAX OUT	Coaxial input of digital appliances such as CD recorders or MD recorders.
	16 COAX 2 IN	Coaxial output of digital appliances.
	17 COAX 1 IN	Coaxial output of digital appliances.
	18 OPTICAL IN	Optical output of digital appliances such as DVD players, CD players, CD recorders or MD players.
VIDEO IN/OUT	20 DVD IN	Output of a DVD player.
	21 MON OUT	Input of a monitor (e. g. the TV).
	23 VCR IN	Output of a video recorder.
	24 VCR OUT	Input of a video recorder (for recording).
	26 SAT IN	Output of a satellite system.
Antenna connectors	22 AM LOOP	Frame antenna supplied.
	25 FM 75 Ω	Wire antenna supplied or exterior antenna.
Preamplified outputs	6 CENTER PRE-OUT	Input of a TV when it is used as the centre speaker (only possible when the CINEMA LINK system bus is connected).
	27 SUBWOOFER PRE-OUT	Input of a powered subwoofer.
System control bus	28 CINEMA LINK	System control bus sockets of a Philips TV with CINEMA LINK.
Mains outlets (not on all versions)	29 AC OUTLET	Supplies same voltage as mains. Up to 100 W total permitted load.
Mains lead	30	After all other connections have been made, connect the mains lead to the wall socket.

Video connections

Mains

The type plate is located on the rear of the receiver.

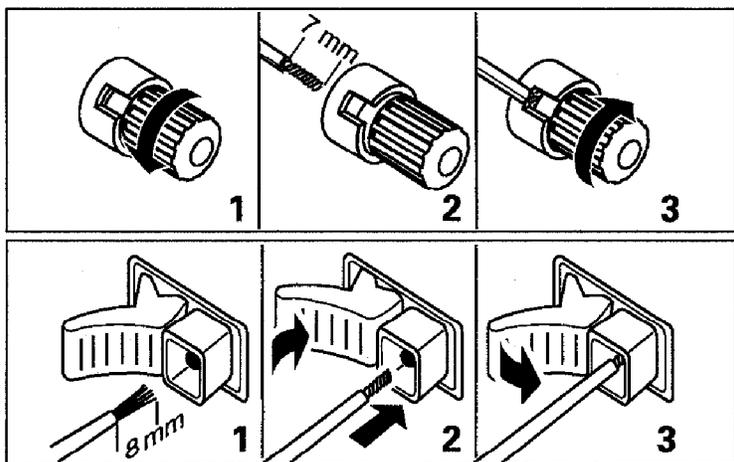

- 1 Check whether the mains voltage as shown on the type plate corresponds to your local mains voltage. If it does not, consult your dealer or service organization.
- 2 Connect the mains cable to the wall socket.

To disconnect the set from the mains completely, remove the mains plug from the wall socket.

For users in the U. K.: please follow the instructions on page 2.

Speaker connections

Some of the speaker connections on the receiver are screw connectors and some are click-fit connectors. Use them as shown below.

- 1 Always connect the coloured (or marked) wire to the coloured terminal and the black (or unmarked) wire to the black terminal.

- 2 Connect:
 - Left front speaker to L (red and black)
 - Right front speaker to R (red and black)
 - Center speaker to CENTER (blue and black)
 - Left surround speaker to SURROUND L (grey and black)
 - Right surround speaker to SURROUND R (grey and black)

TV as the center speaker

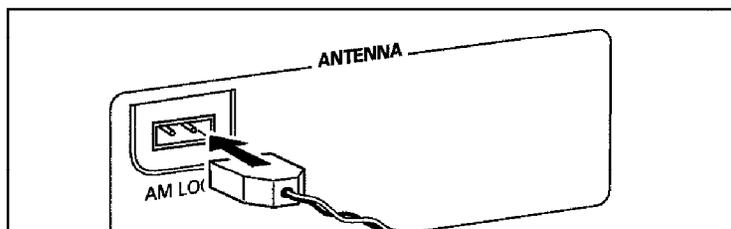

You may use your Philips TV with CINEMA LINK as the center speaker. For TVs with a scart connector an additional audio cinch-to-scart cable is needed. For TV's with cinch connectors additional cinch cables are needed. Look into the instruction manual of your TV on how to use it as the center speaker.

Antenna connections

AM (MW) antenna

The loop antenna supplied is for indoor use only. Position the antenna as far away as possible from the receiver, the TV, the cables, a DVD player, a VCR and other radiation sources.

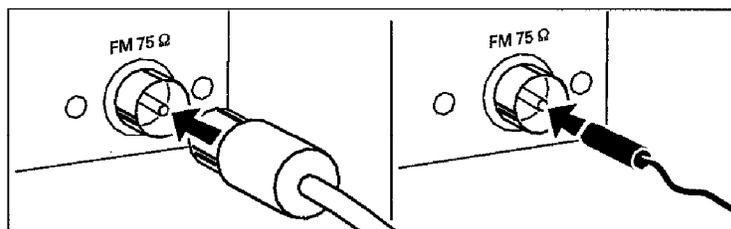

- 1 Fit the plug of the frame antenna to AM LOOP as shown below.
- 2 Turn the antenna for optimum reception.

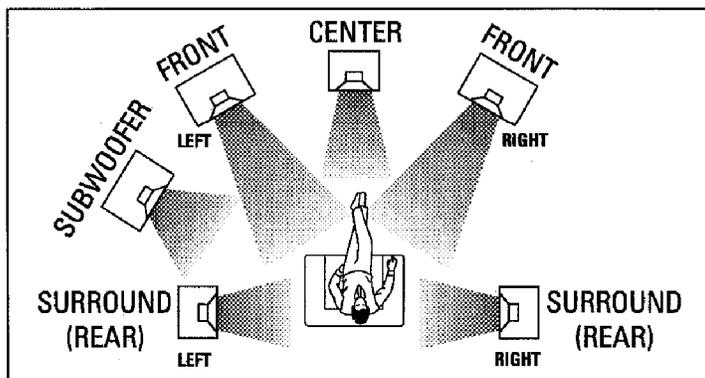

FM antenna

The wire antenna supplied can only be used to receive nearby stations. For better reception we recommend using a cable antenna system or an outdoor antenna.

- 1 Fit the supplied wire antenna to FM 75 Ω as shown below.
 - 2 Move the antenna in different positions for optimum reception.
- If you are using a cable antenna system or an outdoor antenna, fit the antenna plug to FM 75 Ω instead of the wire antenna.

Positioning of the speakers

General hints for positioning

Avoid positioning the speakers in a corner or on the floor as this will boost the bass tones too much. Placing the speakers behind curtains, furniture, etc. will reduce the treble response. The listener should always be able to "see" the speakers.

Each room has different acoustic characteristics and the positioning possibilities are often limited. You can find the best position for your speakers by referring to the picture above.

As a minimum we recommend 5 speakers (2 front, a center, 2 surround) for good surround sound. It is possible to reproduce some kind of surround sound with fewer speakers. This is done by redirecting the signals which are foreseen for the missing speakers to the existing ones. See "Menus" on how to set up the receiver correctly for the number and size of the speakers used.

Positioning the front speakers

The front speakers should be placed right and left in front of the listening position like usual stereo speakers.

Positioning the center speaker

The center speaker should be placed in the center between the two front speakers, e. g. underneath or on top of the TV. The best height for the center speaker is the height of the listener's ears (while seated).

Positioning the surround speakers

The surround speakers should face each other and be in line with, or slightly behind the listener.

Positioning the subwoofer

A subwoofer can be used to enhance the bass performance of your system dramatically. The subwoofer can be positioned anywhere in the room, because it is not possible to locate the source of deep tones. Nevertheless, you should not place the subwoofer in the middle of a room, since the bass could be severely weakened. Do not place any object on the subwoofer.

Speaker setup and testing

The relative volume of the speakers must be adjusted for optimal surround sound. You should be at your usual listening position when adjusting the speaker volume. See "Receiver menus" on how to set up the receiver for the used speakers.

- 1 Press POWER / STANDBY to switch on the receiver.
- 2 Press TEST TONE on the remote control.
 - A test tone coming from the different speakers is heard.
- 3 Press + / - REAR on the remote control to increase/decrease the volume of the actual speaker.
- 4 Press TEST TONE on the remote control.
 - The test tone stops.

Note: If you are not completely satisfied with the volume settings, we recommend making minor adjustments to them during surround sound playback.

Power handling

If the receiver is used at very high power it can produce distortions which may seriously damage your speakers. If distortions occur, reduce the volume and the tone controls to a level where the sound is acceptable again.

To avoid overheating of the set a safety circuit has been built in. Therefore your set may disconnect under extreme conditions. If this happens, switch the set off and let it cool down before reusing it.

Headphones

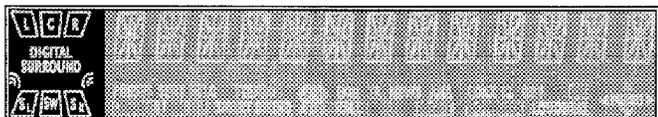

Connecting headphones to PHONES will switch off the speakers. The receiver switches to STEREO and surround sound will be reduced to a stereo signal which is reproducible by standard headphones.

Disconnecting the headphones switches on the speakers again. If you wish to enjoy surround sound again, switch the receiver back to surround sound.

Display

The display of the receiver is divided into 4 sections, which are to be used for the following:

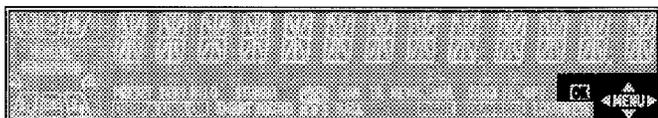

Speaker diagram

A rectangle with a letter in it shows that a speaker is in use. If only a letter is shown, this speaker is not used and its sound is reproduced by the other speakers.

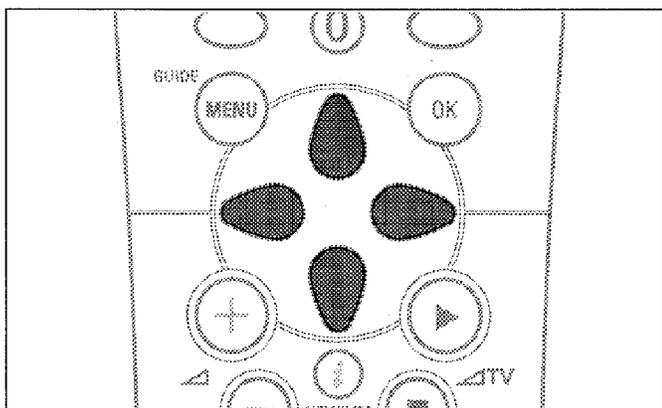

-virtual 3D surround
- SURROUND**surround sound is reproduced
- DIGITAL SURROUND**digital surround sound is reproduced
- L, R**front left and right speaker
- C**center speaker
- SL, SR**surround speakers
- SW**subwoofer

Menu indication

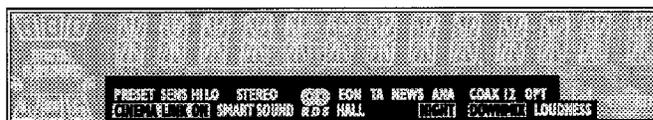

These signs show you if the menu is on or off and indicate in which direction you may move.

- MENU**menu is on
-You may move backwards to the previous menu topic using **◀ PREV. / EXIT** ("left" key on the remote control).
-You may move up in an option list using **◆ MENU NAVIGATOR** ("up" key on the remote control).
-You may move down in an option list using **◆ MENU NAVIGATOR** ("down" key on the remote control).
-You may move forward to the next menu topic using **NEXT ▶** ("right" key on the remote control).
- OK**You may confirm the displayed value.

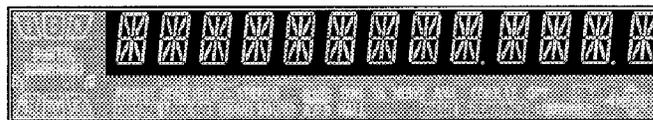

Status lights

Signs showing you various settings and information about the status of the receiver.

- PRESET**Tuner is tuned to a preset radio station.
- SENS HI**Tuner is switched to high sensitivity.
- SENS LO**Tuner is switched to low sensitivity.
- CINEMA LINK ON**CINEMA LINK is active
- STEREO**An FM station is being received in stereo.
- SMART SOUND**One of the preset sound settings of the receiver is being used.
-An RDS station is being received.
- EON**An RDS station with EON is being received.
- HALL**HALL effect is on.
- TA**RDS traffic announcement is on
- NEWS**RDS news announcement is on
- ANA**Analogue input is being used for the playing source.
- NIGHT**NIGHT MODE is on.
- COAX 1**Coaxial digital input COAX 1 is being used for the playing source.
- COAX 2**Coaxial digital input COAX 2 is being used for the playing source.
- DOWNMIX**Incoming multi channel signals are being reduced to fewer output signals (depending on the number of speakers).
- OPT**Optical digital input OPTICAL IN is being used for the playing source.
- LOUDNESS**LOUDNESS is switched on.

Information area

This area is used for feedback of the receiver, tuner frequencies, menu options, values and scrolling text messages.

Receiver menu

The receiver is equipped with a menu system. The menu is used for the setup of the receiver. The different menu options are related to each other in a logical way. Let's assume you have no center speaker connected, and therefore switched *CENTER SPEAKER* to *NO*. If you try to use *VOL CENTER*, a message will be scrolled that this is not possible (*INSTALL CENTER SPEAKER*).

The menu always works the same way. Arrows in the display show you the possible moving directions.

1 Press SETUP MENU.

→ **MENU**, and * *EFFECTS* is displayed.

• You can exit the menu at any time by pressing SETUP MENU.

2 Turn \blacktriangleleft MENU NAVIGATOR until the desired option (or a value) is displayed.

3 Press NEXT \blacktriangleright to choose the displayed option (or ENTER / OK to confirm a value).

- You can leave any option (values remain unchanged) by pressing \blacktriangleleft PREV. / EXIT.

Menu structure

* *EFFECTS*

Switches sound effects.

— *3D SURR*

virtual 3D surround: 0...100 %

* *VOL BALANCE*

Adjusts the relative volume balance between the connected speakers.

— *TEST TONE*

Test tone: on/off

— *VOL FRONT-L*

Volume front left speaker: -50...+50

— *VOL FRONT-R*

Volume front right speaker: -50...+50

— *VOL CENTER*

Volume center speaker: -50...+50

— *VOL REAR-L*

Volume rear left speaker: -50...+50

— *VOL REAR-R*

Volume rear right speaker: -50...+50

— *VOL SUBWOOFER*

Volume subwoofer: -50...+50

* *SPEAKR SETUP*

Selects the used speakers.

— *CENTER SPEAKR*

Center speaker present: yes/no

— *REAR SPEAKR*

Rear speakers present: yes/no

— *SUBW PRESENT*

Subwoofer present: yes/no

* *SPEAKR SIZES*

Chooses the speaker sizes of the used speakers, for optimal sound reproduction. The distance between the usual listening position and the speakers defines the delay time for the surround sound.

— *SUBW PRESENT*

Subwoofer present: yes/no

— *FRONT SIZE*

Left and right front speakers: small/large

— *CENTER SIZE*

Center speaker: small/large

— *REAR SIZE*

Rear speakers: small/large

* *SPK DISTANCE*

Distance between the usual listening position and the speakers. This defines the delay time for the surround sound.

— *DIST L/R*

Distance to front speakers: 1...10 m

— *DISTANCE CNTR*

Distance to center speaker: 1...10 m

— *DISTANCE REAR*

Distance to rear speakers: 1...10 m

* *SELECT INPUT*

Assigns the audio input connectors to the different source selections chosen with SOURCE SELECTOR (see "SOURCE SELECTION" for details).

— *COAX 1*

Digital coaxial input 1, COAX 1 IN

— *COAX 2*

Digital coaxial input 2, COAX 2 IN

— *OPT*

Digital optical input, OPTICAL IN

— *SAT IN*

Analogue audio input SAT IN

— *VCR IN*

Analogue audio input VCR IN

— *TV IN*

Analogue audio input TV IN

— *CDR IN*

Analogue audio input CDR IN

— *CD IN*

Analogue audio input CD IN

* *TUNER*

Setup for preset radio stations (see "TUNER" for details).

— *AUTO INSTALL*

Stores radio stations automatically

— *MAN INSTALL*

Stores radio stations manually

— *GIVE NAME*

Allows to assign names to stored radio stations

— *RESHUFFLE*

Resorts stored radio stations

TV menu

If the receiver is connected to a Philips CINEMA LINK TV via the CINEMA LINK system control bus sockets (see "CONNECTIONS"), you may use the TV to set up the system. An option called RECEIVER will be added to the TV menu.

If CINEMA LINK is on, adjustments on the receiver will be shown on the TV screen for a few seconds. Consult the instruction booklet of your TV on how to use the TV menu. The options offered may vary by TV model.

Switching the connection

- Press CINEMA LINK to switch the connection between the receiver and the TV either on or off.
 - If the connection is switched on, **CINEMA LINK ON** is displayed.

Note: We recommend switching CINEMA LINK off during recording. This avoids unwanted interruptions due to switching TV functions.

If CINEMA LINK is switched on and the TV menu is active, **TV MENU** is displayed and the menu and sound functions on the receiver are locked.

SOURCE SELECTOR

When selecting a source by turning SOURCE SELECTOR, the audio and video inputs with the corresponding name are activated. The incoming signal is reproduced by all audio and – if the source includes a video signal – video outputs of the receiver. It is possible to reassign a source selection to other than these standard inputs.

Source selectedConnectors used

DVD.....	COAX 1 digital audio input and DVD IN video input
PHONO.....	PHONO IN audio input
TUNER	The tuner part of the receiver is used, all inputs are switched off.
CD	CD IN audio input
CDR/TAPE	CDR/TAPE IN audio input
TV.....	TV IN audio input and no video input
VCR	VCR IN audio input and VCR IN video input
SAT	SAT IN audio input and SAT IN video input

Reassigning a source selection

If a source is selected with SOURCE SELECTOR the standard audio input is used. To change this, the source selection must be reassigned to another audio input.

Example: Reassigning [CD] from the analogue CD IN audio input to the digital COAX 2 IN audio input.

- 1 Choose * *SELECT INPUT* from the menu and press NEXT ►.
- 2 Turn SOURCE SELECTOR to select the source which should be reassigned (e. g. [CD]).
→The name of the source is displayed and the light of the source flashes.
- 3 Turn ◆ MENU NAVIGATOR to select the input connectors which should be used (e. g. [CD] → [COAX2]).
- 4 Press ENTER / OK to confirm your selection.
→*STORE* is displayed briefly.
- 5 This source selection is now using the chosen audio input (e. g. [CD] uses the COAX 2 IN input connectors, **COAX 2** lights when switching to CD).

Using one source selection for two or more appliances

You may assign more than one source to a source selection. This can be useful when products are connected one after the other in a chain.

Example: A VCR is connected to the TV but only the TV is connected to the receiver. Both SOURCE SELECTOR settings, TV as well as VCR, have to use the TV input connectors.

- 1 Choose * *SELECT INPUT* from the menu and press NEXT ►.
- 2 Turn SOURCE SELECTOR to select the source which should be reassigned (e. g. *VCR*).
→The name of the source is displayed and the light of the source flashes.
- 3 Turn ◆ MENU NAVIGATOR to select the input connectors which should be used (e. g. *VCR* → *TV IN*).
- 4 Press ENTER / OK to confirm your selection.
→*STORE* is displayed briefly.
- 5 This source selection is now using the chosen audio input (e. g. *VCR* uses the TV IN input connectors, *VCR* (*TV IN*) is displayed briefly when switching to VCR).

Playing a source

- 1 Press **POWER / STANDBY** to switch on the receiver.
- 2 Turn **SOURCE SELECTOR** to select a source.
→ The name of the source is displayed.

 - You can select the **FRONT AV / GAME** input by pressing **FRONT AV** (FR 970 only).

- 3 Start playback of the source as usual.

Adjusting the sound

- Turn **VOLUME** to adjust the volume.
→ **VOLUME** and the volume level between **0** and **50** is displayed.
- 1 Press **BASS** or **TREBLE**.
→ **BASS** or **TREBLE** and the actual value are displayed briefly. Then **TURN VOLUME KNOB TO CHANGE** is scrolled.
 - 2 Turn **VOLUME** to adjust the bass or treble.
→ **BASS** or **TREBLE** and the actual value are displayed.
- Note : If VOLUME is not turned within 5 seconds or if any other control is used, the bass or treble adjustment is switched off.*
- Press **SOUND** on the remote control to scroll through the built-in smart sounds: **MOVIE, SPEECH, MUSIC, MULTIMEDIA** and **PERSONAL**. (**PERSONAL** is the user-defined bass and treble setting.)
→ **SMART SOUND** is displayed and the name of the chosen sound profile is scrolled once if smart sound is on.
 - Press **LOUDNESS** to switch loudness either on or off.
→ **LOUDNESS** is displayed if loudness is on.

Recording from a source

If you wish to record from a source you must select it with **SOURCE SELECTOR**. The incoming signal is reproduced by all audio and – if the source includes a video signal – video outputs of the receiver. The sound settings do not affect the recording.

- 1 Turn **SOURCE SELECTOR** (or press **FRONT AV** – FR 970 only) to select the source you want to record from.
→ The name of the source is displayed.
- 2 Prepare the desired recording appliance. It must be connected to one of the outputs of the receiver.
- 3 Start recording on the recording appliance.
- 4 Start the playback of the source as usual.

*Notes: – The audio and video signal of VCR IN is not reproduced by VCR OUT. The same applies to the audio signal of CDR/TAPE IN to CDR/TAPE OUT.
– We recommend not to use the digital output COAX OUT of the receiver to record from an analogue source. Use the analogue output CDR/TAPE instead.*

About surround sound

Surround sound gives you a complete new listening sensation. You will have the feeling of being in the middle of the action, because sound is coming from everywhere around you. Look out for TV broadcasts, audio and video tapes and discs with the **DOLBY SURROUND PRO LOGIC**, **DOLBY DIGITAL** or **MPEG Multichannel** marks which are encoded for multichannel surround sound. You should prefer Dolby Digital or MPEG Multichannel to get the best out of your receiver.

Notice that DVDs do not always carry full multichannel surround. To be sure that a disc is multichannel encoded consult your dealer.

Most ordinary stereo tapes and discs can be replayed using surround sound settings with good results. If the reproduction is distorted in surround mode, switch to normal stereo mode.

The availability of the various surround sound modes described depends on the number of speakers used and the incoming sound information.

Switching surround sound

With surround sound on, you can switch through the different surround modes. Note that the possibilities are related to speaker setup defined in the receivers menu.

If a digital surround signal is detected, the receiver will scroll either **DOLBY DIGITAL** or **MPEG**.

- 1 Press **SURROUND ON/OFF** to switch on the surround sound.
→ The surround mode in use is scrolled.
- 2 Press **SURR. MODE** repeatedly to listen to the different surround modes (if available).
→ The chosen mode and the speakers used are displayed.
If the incoming multichannel signals are reduced to fewer output signals, **DOWNMIX** is displayed.
- 3 Press **3D SURROUND** to switch virtual 3D surround either on or off.
→ A light indicates if virtual 3D surround is on.
- 4 Press **SURROUND ON/OFF** to switch off the surround sound.
→ **SURROUND OFF** is scrolled.

Surround sound settings

HALL

The sound reproduction is enhanced and a slight echo is added. This gives the impression of being in a large room.

SURROUND

The surround mode enables normal surround sound reproduction with 4 or 5 speakers. Depending on the source material, Dolby Surround Pro Logic, Dolby Digital or MPEG is reproduced.

PRO LOGIC, DOLBY DIGITAL, MPEG

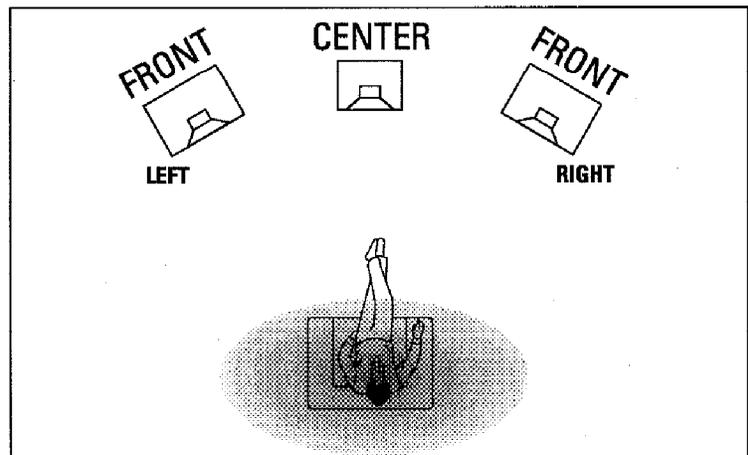

In addition to **SURROUND**, the surround mode used – depending on the source material – will be displayed.

FRONT-3 STEREO

The surround sound is muted. 3 Stereo lets you listen to surround sound without using the surround speakers.

3D SURROUND

The sound of the rear channel is simulated by the front speakers. Surround sound is simulated through the front left, right and center speakers. The position of the listener influences the surround effect. The area where the effect is best is shown in grey.

STEREO

All sound is reproduced and played through the front left and right speakers. This enables standard stereo reproduction.

NIGHT MODE (only on the remote control)

The loud parts of the sound are lowered and the soft passages are raised. You can enjoy surround sound without disturbing sleeping children or neighbours. Night mode only works with Dolby Digital and MPEG, and only if supported by the source material.

Tuning to radio stations

You can search for radio stations by scanning the frequency band. You can also key in the frequency of a known radio station. If an FM station is being broadcast and received in stereo, **STEREO** is shown.

Searching for radio stations

- 1 Turn SOURCE SELECTOR to select the tuner.
→ **TUNER** is displayed.
- 2 Select a waveband by pressing TUNER AM/FM repeatedly.
→ The selected waveband is displayed.
- 3 Keep ◀ or ▶ pressed for approximately 1 second.
→ **SEARCH** is displayed and the tuner tunes to a station with sufficient strength.
- 4 Repeat this procedure until you find the desired station.
 - To fine tune to a weak transmitter, briefly press ◀ or ▶ as often as necessary for optimum reception.

Tuning to a radio station by frequency (with the remote control only)

- 1 Press TUNER.
→ **TUNER** is displayed.
- 2 Press TUNER again to select a different waveband.
→ The selected waveband is displayed.
- 3 Press FR. D..
→ **_** is displayed.
- 4 Use 1-0 to key in the frequency of a radio station.

Note: Only valid numbers within the frequency range of the tuner can be keyed in.

Switching FM sensitivity

You can switch the tuner to a lower search sensitivity, to search only for stations with a strong signal (FM only).

- 1 Turn SOURCE SELECTOR to select the tuner.
→ **TUNER** is displayed.
- 2 Press SENS. on the receiver.
→ Either **SENS HI** or **SENS LO** is displayed for 5 seconds.

*Note: While searching for radio stations, the actual sensitivity is displayed. In this case, **SENS LO** means the tuner is only looking for radio stations with a strong signal.*

Storing radio stations

You may store up to 30 radio stations in the memory. The receiver can select and program radio stations by itself or you can choose them yourself.

Automatic programming

- 1 Choose * **TUNER** from the menu and press NEXT ▶.
- 2 Choose **AUTO INSTALL** and press NEXT ▶.
→ The preset number where programming will start, the waveband and **AUTO** are displayed.
- 3 Turn TUNER PRESET ◊ to change the preset number where programming should start.
- 4 Use TUNER AM/FM to switch to the desired waveband.
- 5 Press ENTER / OK to start programming.
→ **AUTO INSTALL** flashes and all available radio stations are programmed, this may take a few minutes. Programming is done when **AUTO INSTALL** stops flashing.

Manual programming

- 1 Choose * **TUNER** from the menu and press NEXT ▶.
- 2 Choose **MAN INSTALL** and press NEXT ▶.
→ A preset number, the waveband and the frequency are displayed.
- 3 Turn TUNER PRESET ◊ to change to the preset number where the radio station should be stored.
- 4 Tune to the desired radio station (see "Searching for radio stations").
- 5 Press ENTER / OK to confirm your selection.
→ **STORED** is displayed briefly. The radio station is programmed at the chosen preset number.
- 6 Select and store all desired radio stations this way.

Tuning to stored radio stations

- 1 Turn SOURCE SELECTOR to TUNER to select the tuner.
→ TUNER is displayed.
- 2 Turn TUNER PRESET \blacklozenge to select a preset radio station.
→ PRESET, the preset number and station are displayed.

Resorting stored radio stations

After programming radio stations, you might want to change their sequence. RESHUFFLE allows you to exchange the positions of presets.

- 1 Choose * TUNER from the menu and press NEXT \blacktriangleright .
- 2 Choose RESHUFFLE and press NEXT \blacktriangleright .
→ PRESET, a preset number and station are displayed.
- 3 Turn TUNER PRESET \blacklozenge to select a preset station.
- 4 Press ENTER / OK to confirm the selection.
→ The selected preset number SWAP (↔) and a second preset number are displayed.
- 5 Turn TUNER PRESET \blacklozenge to select the other preset station.
- 6 Press ENTER / OK to confirm the exchange.
→ RESHUFFLE is displayed briefly and these two preset numbers are swapped.

Naming radio stations

It is possible to assign a name to any of the preset radio stations. RDS station names also can be overwritten.

- 1 Choose * TUNER from the menu and press NEXT \blacktriangleright .
- 2 Choose GIVE NAME and press NEXT \blacktriangleright .
→ A preset radio station is displayed.
- 3 Turn TUNER PRESET \blacklozenge to select the preset to be renamed.
- 4 Press ENTER / OK to confirm your selection.
→ The existing name or _____ is displayed.
- 5 Turn TUNER PRESET \blacklozenge to select a letter and NEXT \blacktriangleright or \blacktriangleleft PREV. to move to the next or previous position.
- 6 After you have entered the entire name, press ENTER / OK to confirm.
→ STORE is displayed and the name is stored.

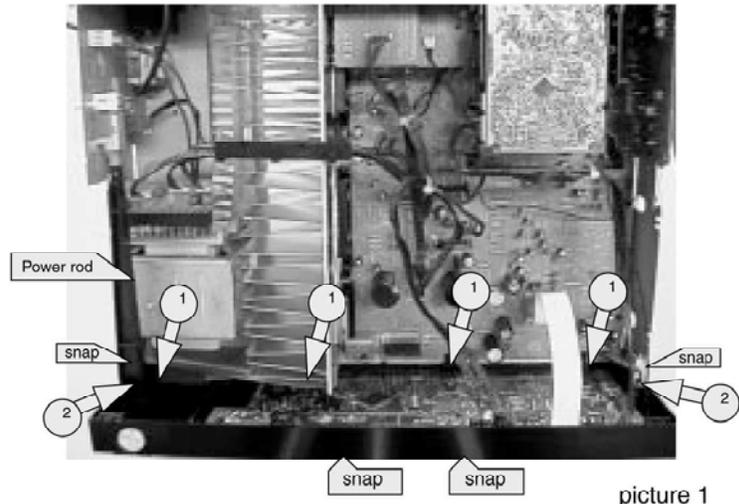

Note: If you want to use the transmitted RDS station name again, simply clear the given name.

Clearing station names

- 1 Use the menu option * TUNER, choose GIVE NAME.
→ A preset radio station is displayed.
- 2 Turn \blacklozenge MENU NAVIGATOR to select the name to be cleared.
- 3 Press ENTER / OK to confirm your selection.
- 4 Press \blacktriangleleft PREV. while the first letter is flashing.
→ CL is flashing to the left of the station name.
- 5 Press ENTER / OK to clear the station name.
Or, if you have changed your mind,
press \blacktriangleleft PREV. to leave the station name as it is.

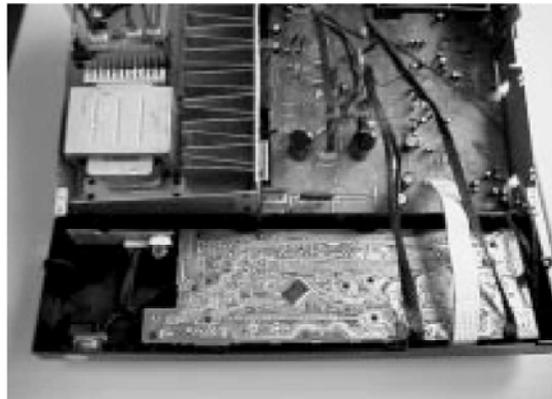

DISMANTLING HINTS

Dismantling of Front

picture 1

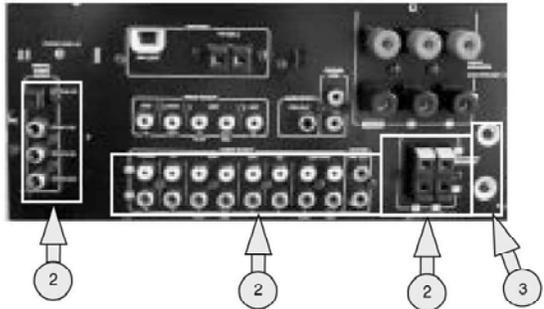

- 1) Remove top cover
- 2) Remove power rod
- 3) Remove 6 x screw as shown in picture 1
- 4) Release two snaps (left & right side front)
- 5) Release two snaps on the bottom side front
- 6) Tipp down front as shown in picture 2

picture 2

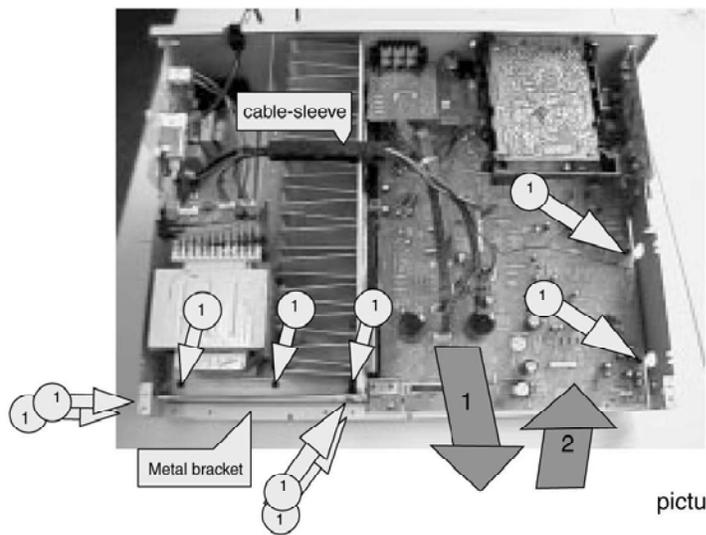

Dismantling of mono board

- 1) Remove front . See picture 1
- 2) Remove whole front (disconnect the wires on the mono board coming from front)

picture 3

- 3) Remove 12 x screws shown in mentioned aria . See picture 3

picture 4

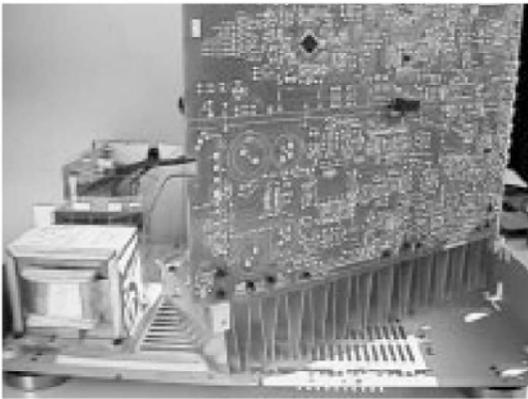

- 4) Remove wires out the cable-sleeve.
- 5) Remove 7 x screw and remove metal metal bracket
- 6) Remove 2 x screw on mono board . See picture 4
- 7) Remove mono board as shown arrow 1 & 2 . See picture 4
- 8) Bring the mono board in the service position as shown in picture 5

Legend

= Torx M3x6mm (screw with big head)

 = Torx 3x10mm

 = Torx M3x6mm

picture 5

Service position mono board

- 1) Bring front in position as shown in picture 6
- 2) Snap nok of front in bottom to make front stable . See picture 7
- 3) Connect front wiring back to mono board.

*The tuner module doesn't have to be connected. Use an other source (pe.CD)

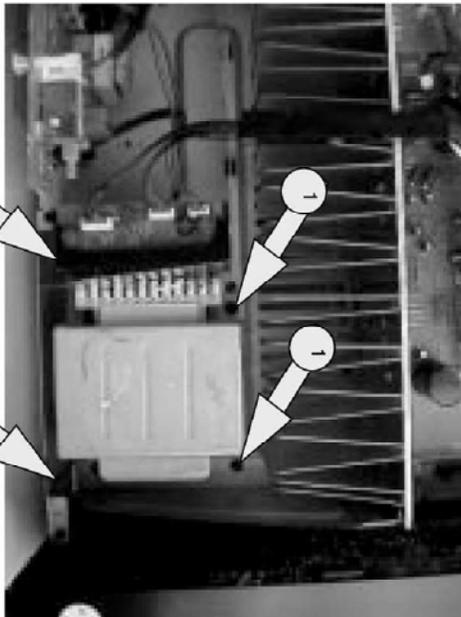

picture 6

picture 7

Dismantling of mains transformer.

picture 8

- 1) Remove power rod
- 2) Remove 4x screw as shown in picture 8

Service position of mains transformer.

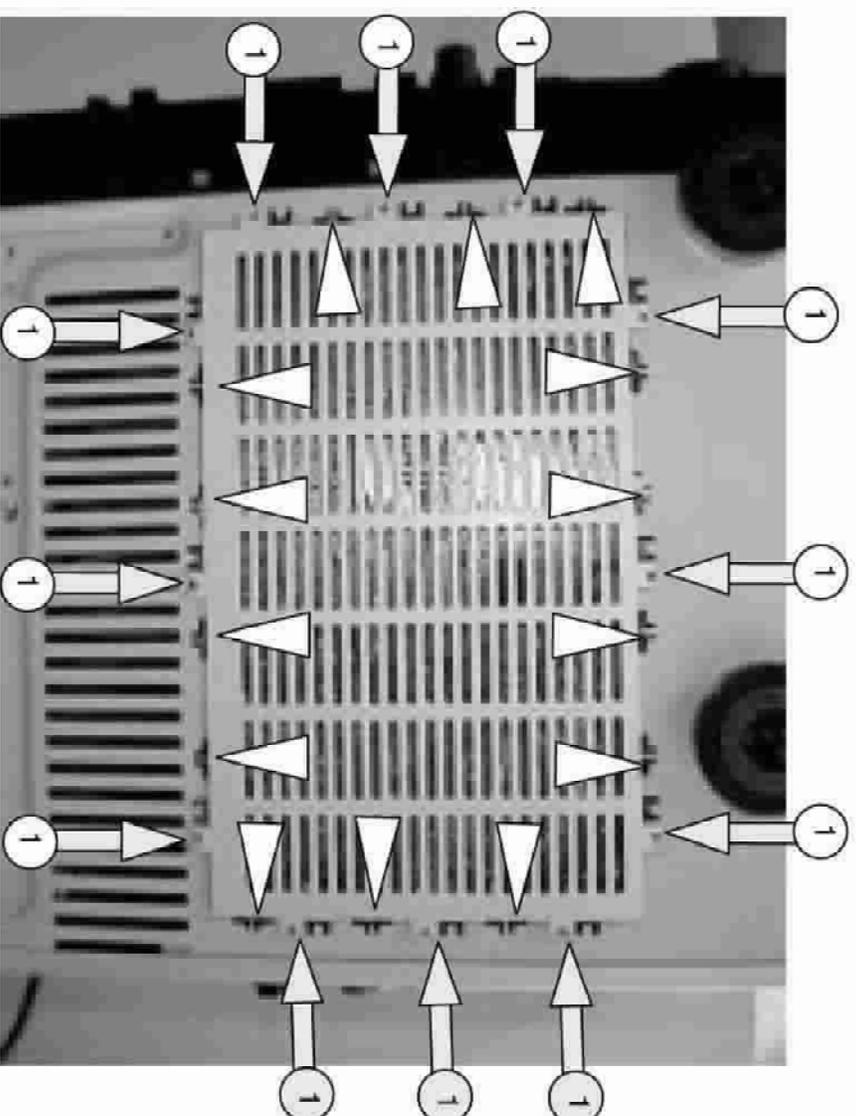

picture 9

- 1) Put mains transformer as shown in picture 9.

* Setting is software controlled

Tuner FM

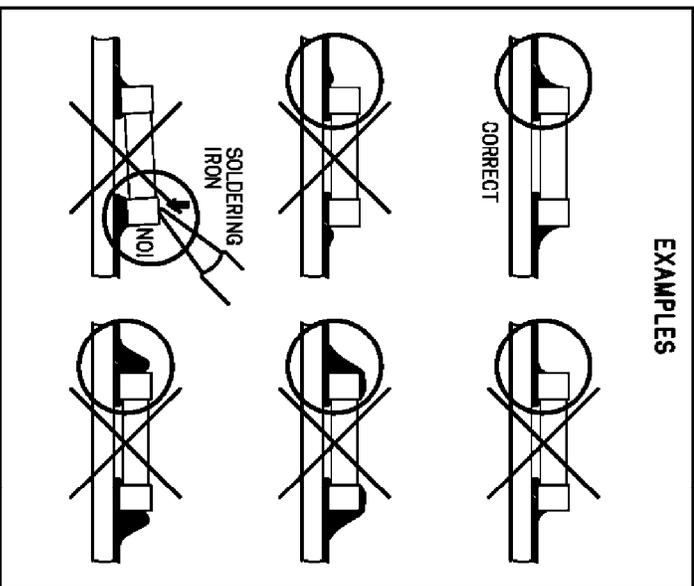

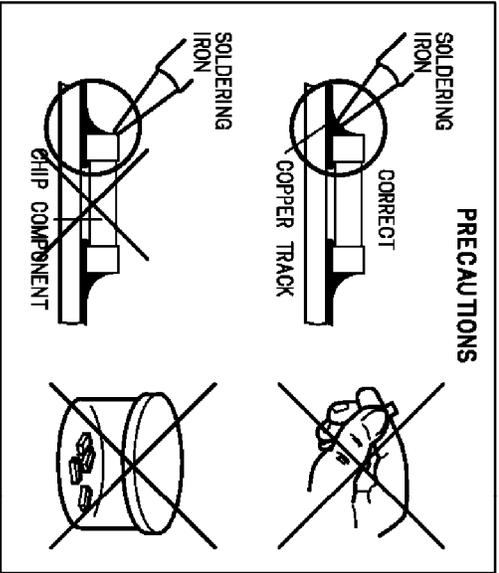

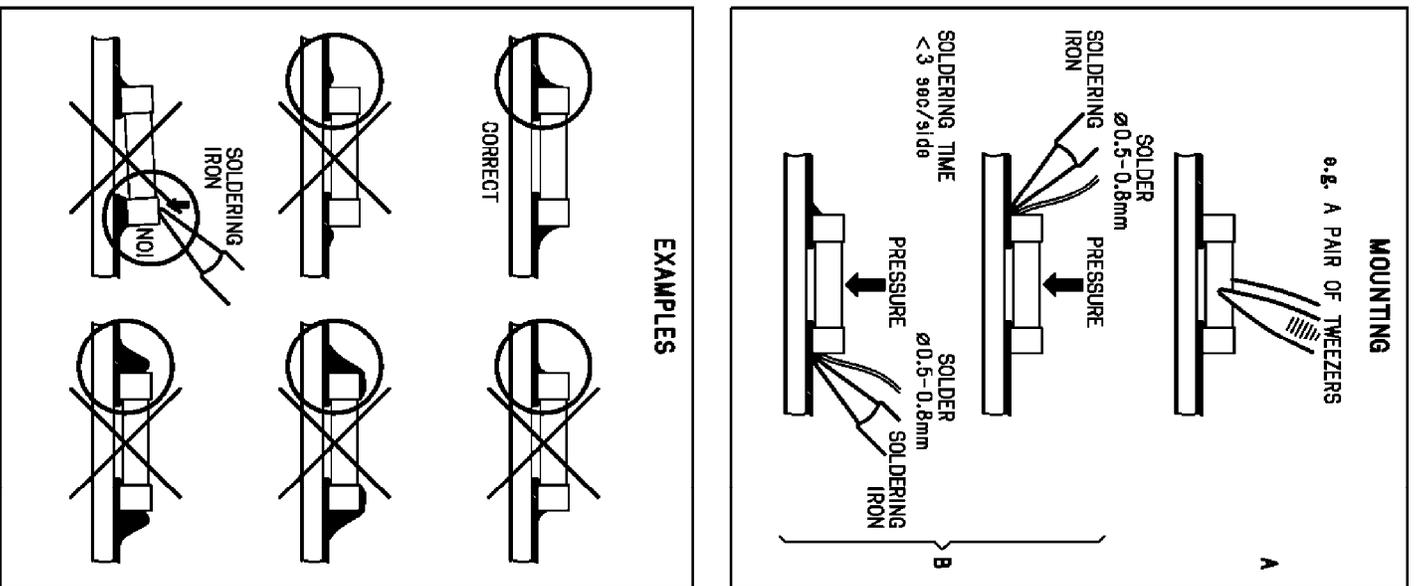

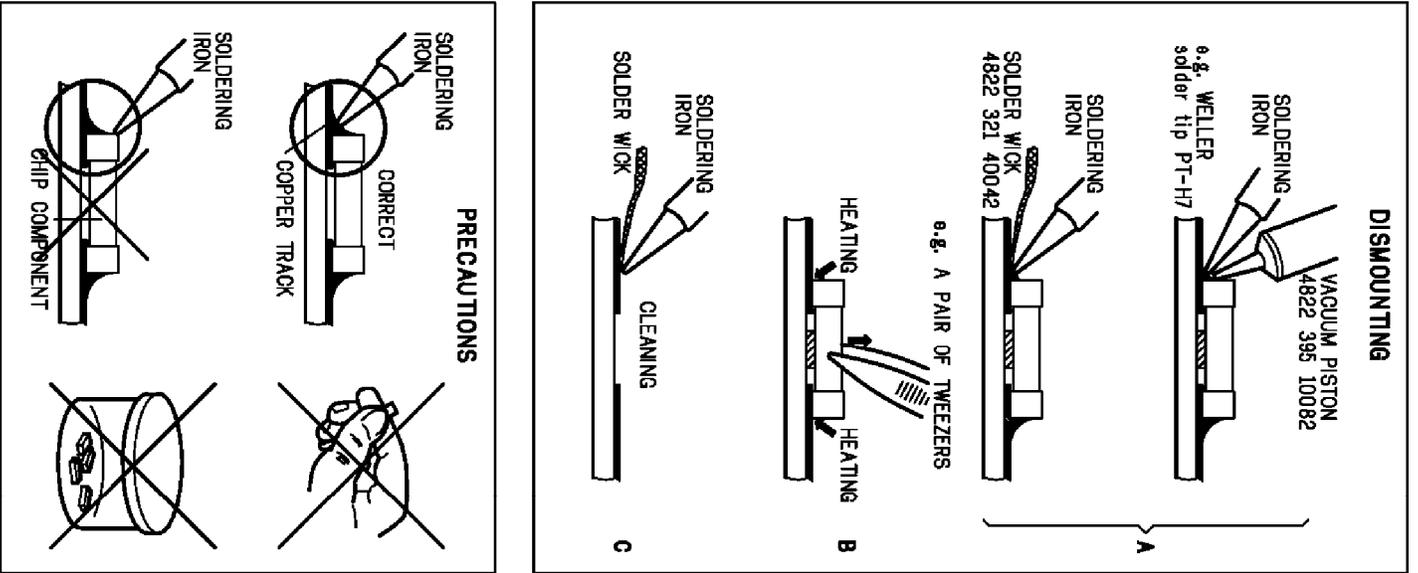

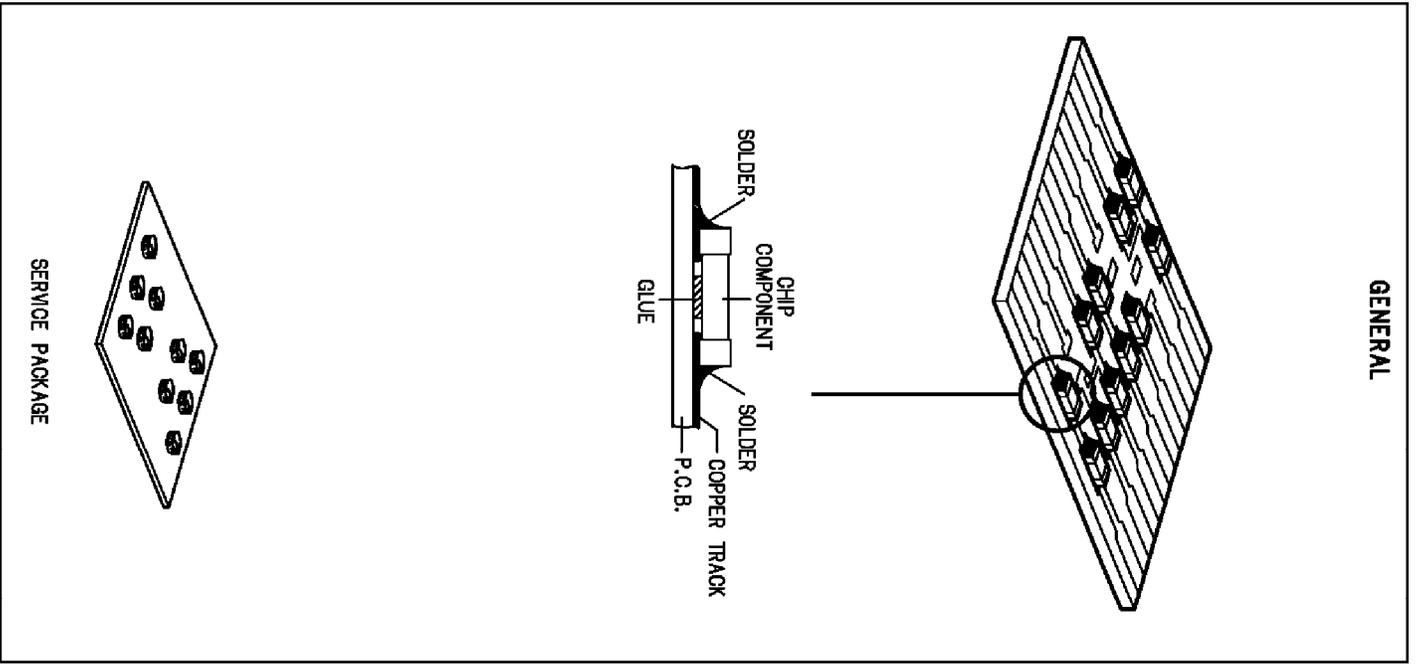

Use a bandpass filter to eliminate hum (50Hz, 100Hz) and disturbance from the pilotone (19kHz, 38kHz).

Tuner AM (MW, LW)

To avoid atmospheric interference all AM-measurements have to be carried out in a Faraday's cage.
Use a bandpass filter (or at least a high pass filter with 250Hz), to eliminate hum (50Hz, 100Hz).

ADJUSTMENT PROCEDURES

[Display Location of Printed Circuit Boards](#)

Safety & ESD Notices

SAFETY

Safety regulations require that the set be restored to its original condition and that parts which are identical with those specified be used.

Safety components are marked by the symbol 

WARNING

ESD

WARNING

All ICs and many other semiconductors are susceptible to electrostatic discharges (ESD).

Careless handling during repair can reduce life drastically.

When repairing, make sure that you are connected with the same potential as the mass of the set via a wristband with resistance.

Keep components and tools at this potential.

10	98MHz	279kHz	70.01MHz		
11	...	198kHz	...		

Table 2

This table is valid for all types of tuners.
 Customer presets will not change after this Tuner test.
 If a station is tuned then the display flag "OK" will be ON, otherwise it will be OFF.
 If the tuned frequency is carrying RDS information, the display flag "RDS" will be ON.
 Oversea version: the tuning grid can be switched between 9kHz and 10kHz by pressing the key "TUNER" for longer than 2 seconds. "Grid 9" or "Grid10" will be shown accordingly.
 Europe version: the LW can be switched On and Off by pressing the key "TUNER" for longer than 2 seconds. LW OFF or LW ON will be shown accordingly.

 : FM grid is 50kHz

TUNER ADJUSTMENT TABLE (ECO5 FM/MW- and FM/MW/LW - versions with AM-frame aerial)

Waverange	Input frequency	Input	Tuned to	Adjust	Output	Scope/Voltmeter
VARICAP ALIGNMENT						
FM 87.5 - 108MHz (65.81 - 74, 87.5 - 108MHz)			108MHz	5130	1	8V ±0.2V
			87.5MHz (65.81MHz)	check		4.3V ±0.5V (1.2V ±0.5V)
MW FM/AM-version, 10kHz grid 530 - 1700kHz			1700kHz	5123		8V ±0.2V
			530kHz	check		1.1V ±0.4V
FM/MW-version, 9kHz grid 531 - 1602kHz			1602kHz	5123		6.9V ±0.2V
			531kHz	check		1.1V ±0.4V
LW 153 - 279kHz			279kHz	5122		8V ±0.2V
			153kHz	check		1.1V ±0.4V
MW FM/MW/LW- version, 9kHz grid 531 - 1602kHz			1602kHz	5123	8V ±0.2V	
			531kHz	check	1.1V ±0.4V	
FM IF						
FM	10.7MHz, 50mV continuous wave	F		5119	2	0 ± 3 mV DC
FM RF						
FM 87.5 - 108MHz (65.81 - 74, 87.5 - 108MHz)	108MHz	A	108MHz	2155	4	MAX
	87.5MHz (65.81MHz)	mod=1kHz Δf=±22.5kHz	87.5MHz (65.81MHz)	5131		
VCO						
FM	98MHz, 1mV continuous wave	A	98MHz	3142	3	152kHz ±1kHz ¹⁾
AM IF						
MW	450kHz connect pin 6 of IC 7101 (AM Osc.) with short wire to ground (pin 4)	C Δf=±15kHz V _{RF} = 3mV		5111	4	
				5112		
AM AFC		C		5114	2	0 ± 2 mV DC
MW		continuous wave V _{RF} = 10mV				
AM RF ³⁾						
MW ⁴⁾ FM/MW/LW- and FM/MW-version (9kHz grid) 531 - 1602kHz	1494kHz	B 	1494kHz	2106	4	
	558kHz		558kHz	5102		
LW	198kHz		198kHz	5103		
MW FM/AM-version, 10kHz grid 530 - 1700kHz	1500kHz		Δf = ±30kHz V _{RF} as low as possible	1500kHz		
	560kHz	560kHz		5102		

Use service test program. By selecting the TUNER TEST test frequencies will be stored as preset frequencies automatically.

¹⁾ If sensitivity of frequency counter is too low adjust to max. channel separation (input signal: stereo left 90% + 9%, adjust output on right channel to minimum)

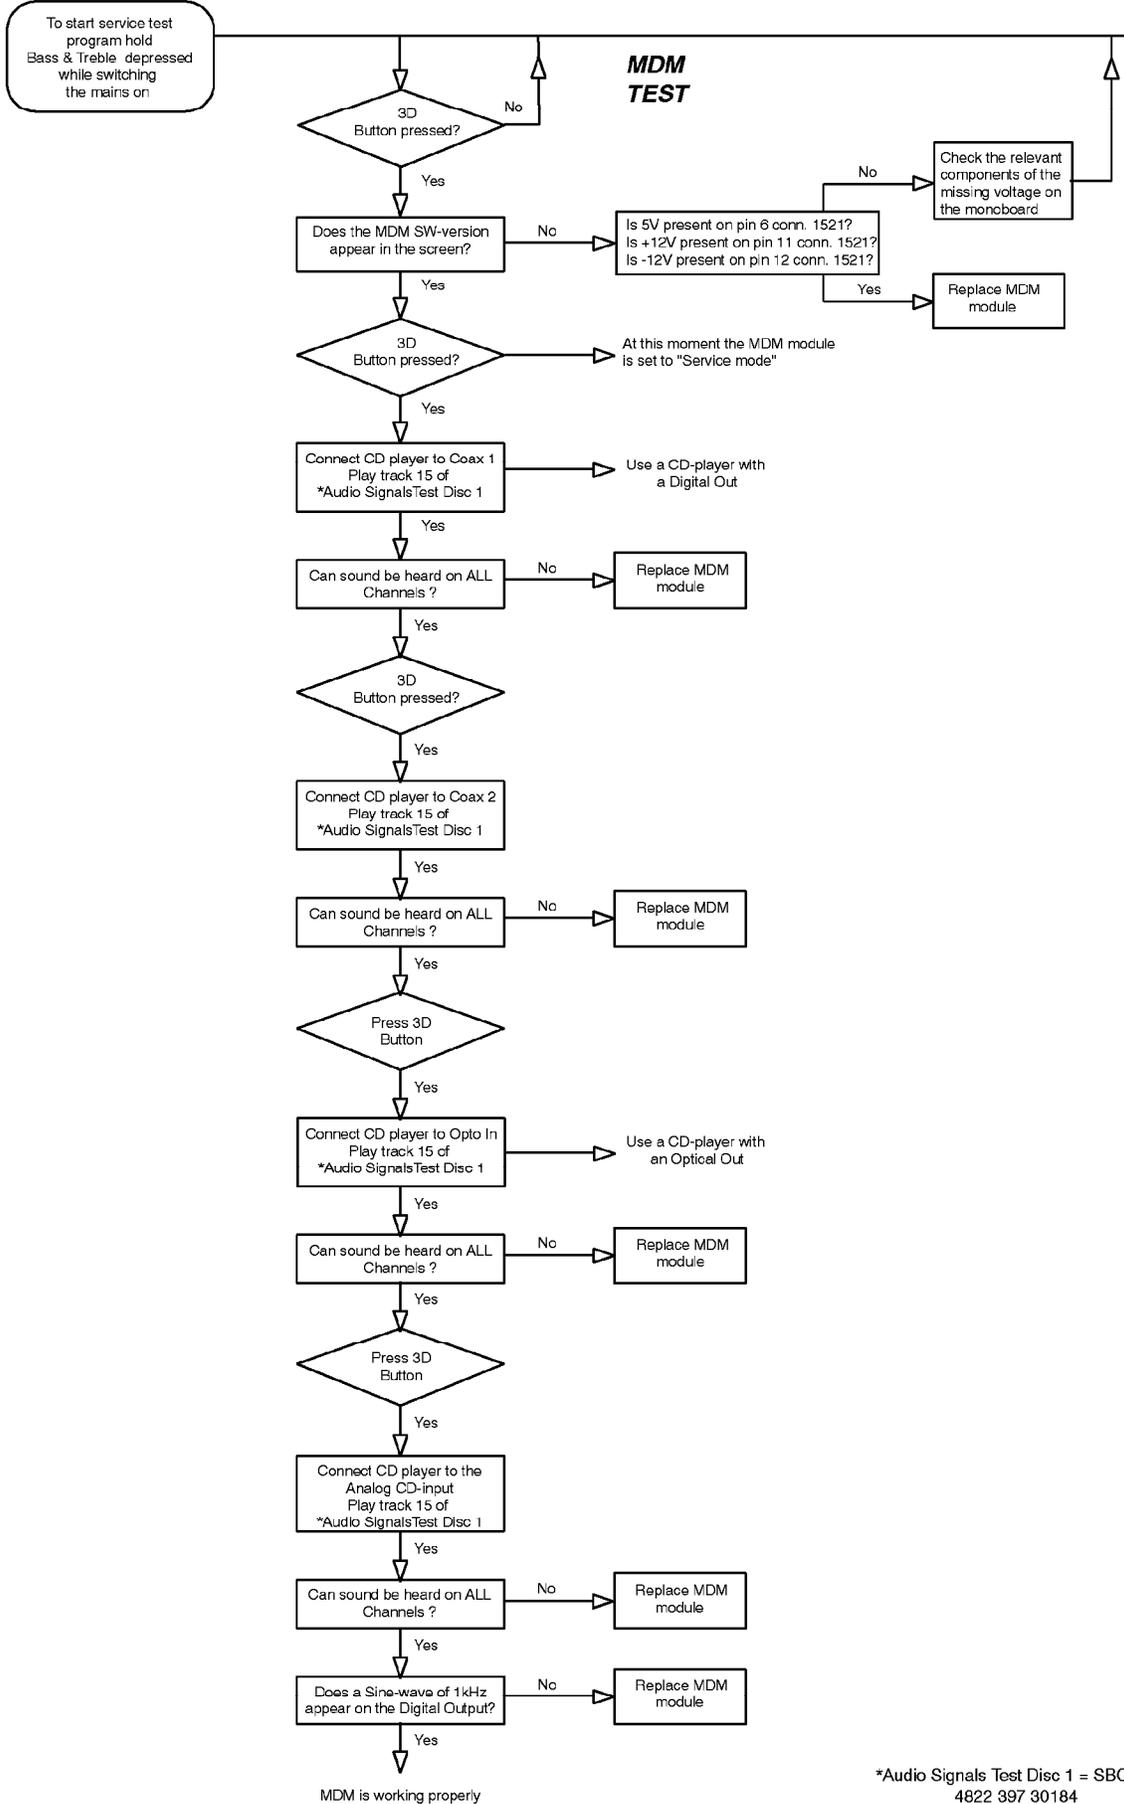

²⁾ RC network serves for damping the IF-filter while adjusting the other one.

³⁾ For AM RF adjustments the original frame antenna has to be used!

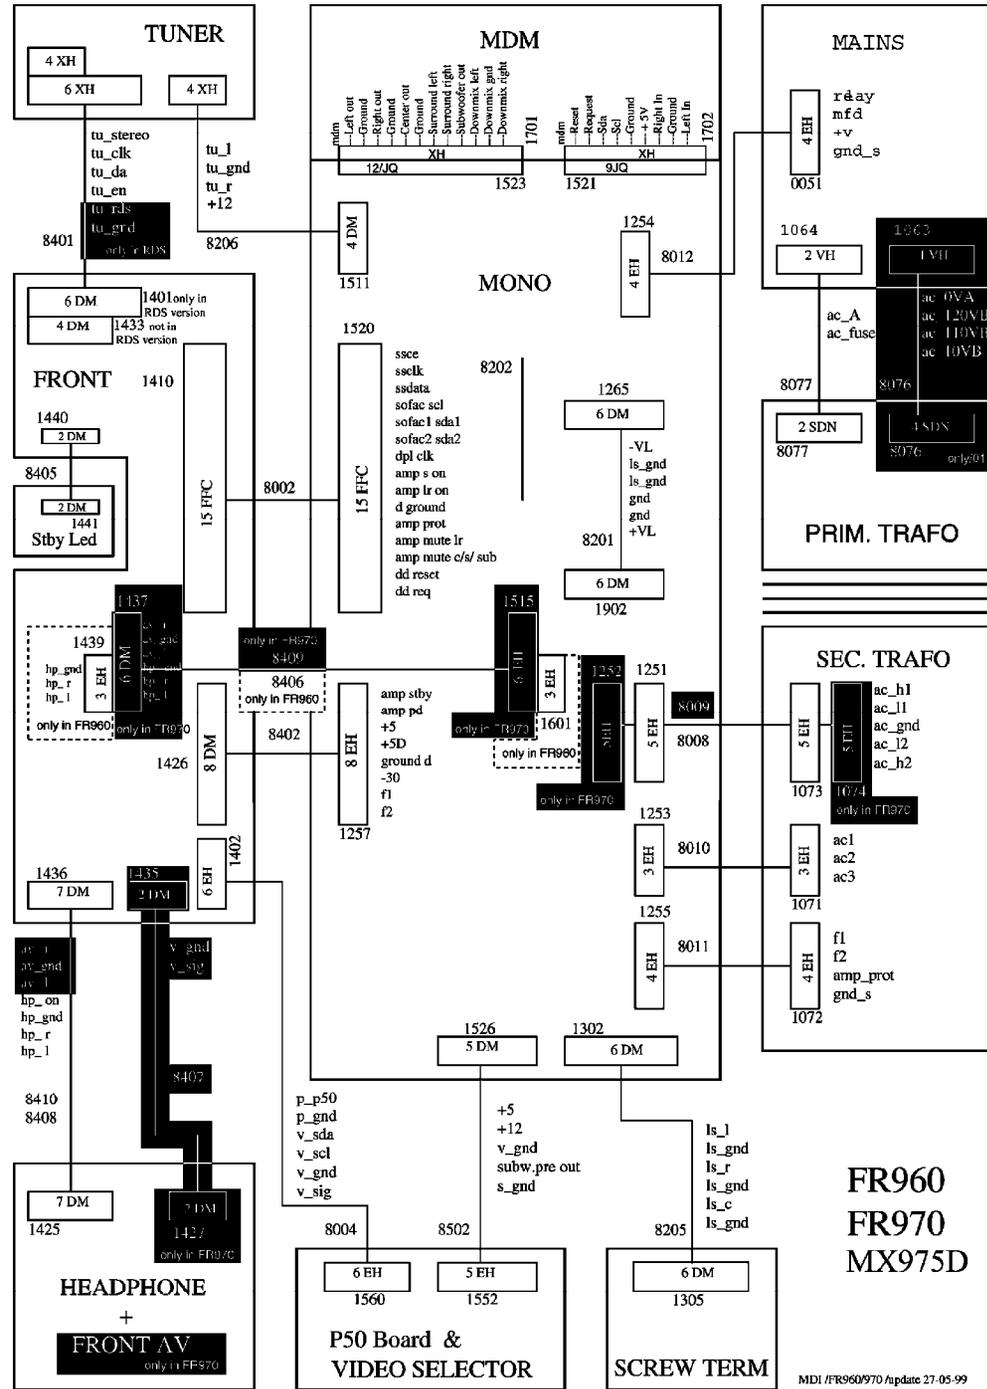

⁴⁾ MW has to be aligned before LW.
