## PCBS LOCATION

## SPECIFICATIONS

### AMPLIFIER

Output power .....	2 x 2W RMS
Signal-to-noise ratio .....	≥ 60 dBA (IEC)
Frequency response .....	125 – 16000 Hz
Impedance loudspeakers .....	8Ω

### CD PLAYER

Frequency range .....	125 – 16000 Hz
Signal-to-noise ratio .....	65 dBA

### TUNER

FM wave range .....	87.5 – 108 MHz
MW wave range .....	531 – 1602 kHz
Sensitivity	
– FM 26 dB sensitivity .....	20 µV
– MW 26 dB sensitivity .....	5 mV/m
Total harmonic distortion .....	≤ 5%

### TAPE DECK

Frequency response	
Normal tape (type I) .....	125 – 8000 Hz (8 dB)
Signal-to-noise ratio	
Normal tape (type I) .....	40 dBA
Wow and flutter .....	≤ 0.4% JIS

### SPEAKERS

Bass reflex system	
Dimensions (w x h x d) ..	134 x 230 x 152 (mm)

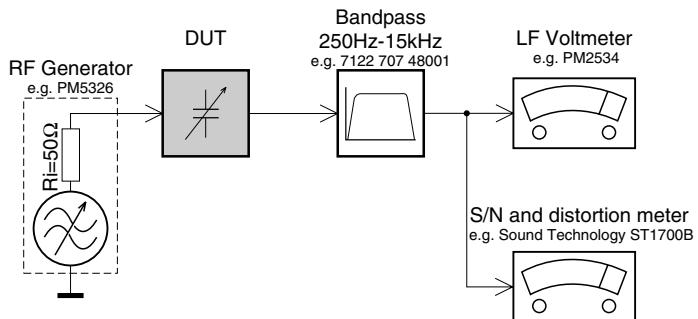

### GENERAL INFORMATION

AC Power .....	220 – 230 V / 50 Hz
Dimensions (w x h x d) ..	148 x 233 x 216 (mm)
Weight (with/without speakers) .....	
.....	approx. 3.65 / 1.53 kg
Power consumption	
Active .....	15 W
Standby .....	< 4 W

***Specifications and external appearance are subject to change without notice.***

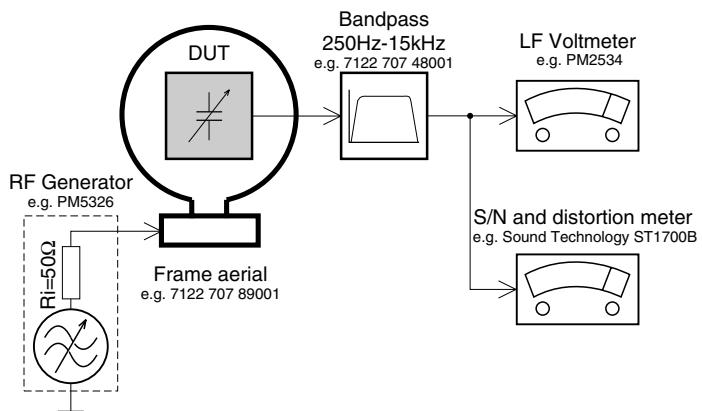

## MEASUREMENT SETUP

### Tuner FM

Use a bandpass filter to eliminate hum (50Hz, 100Hz) and disturbance from the pilottone (19kHz, 38kHz).

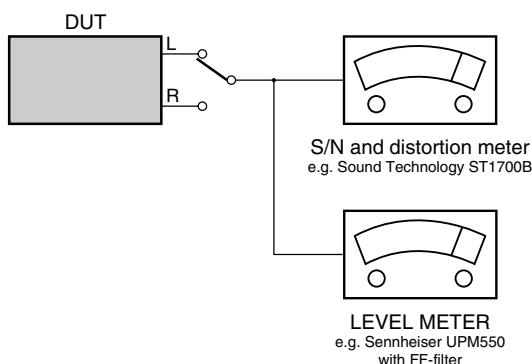

### Tuner AM (MW,LW)

To avoid atmospheric interference all AM-measurements have to be carried out in a Faraday's cage.  
Use a bandpass filter (or at least a high pass filter with 250Hz) to eliminate hum (50Hz, 100Hz).

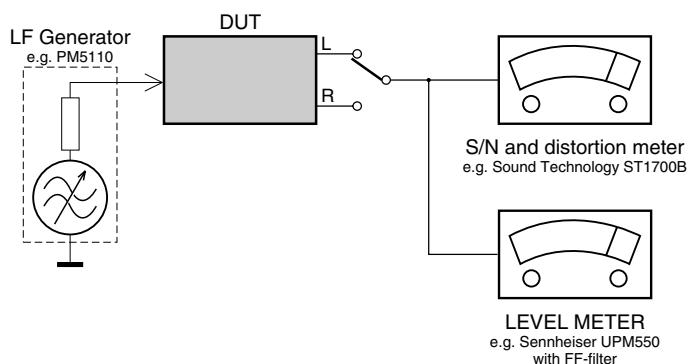

### CD

Use Audio Signal Disc SBC429 4822 397 30184  
(replaces test disc 3)

### Recorder

Use Universal Test Cassette **CrO<sub>2</sub>** SBC419 4822 397 30069  
or Universal Test Cassette **Fe** SBC420 4822 397 30071

## SERVICE AIDS

### Service Tools:

Universal Torx driver holder .....	4822 395 91019
Torx bit T10 150mm .....	4822 395 50456
Torx driver set T6-T20 .....	4822 395 50145
Torx driver T10 extended .....	4822 395 50423

### Compact Disc:

SBC426/426A Test disc 5 + 5A .....	4822 397 30096
SBC442 Audio Burn-in test disc 1kHz .....	4822 397 30155
SBC429 Audio Signals disc .....	4822 397 30184
Dolby Pro-logic Test Disc .....	4822 395 10216

### WARNING

All ICs and many other semi-conductors are susceptible to electrostatic discharges (ESD). Careless handling during repair can reduce life drastically.

When repairing, make sure that you are connected with the same potential as the mass of the set via a wrist wrap with resistance. Keep components and tools also at this potential.

### ESD

Safety regulations require that the set be restored to its original condition and that parts which are identical with those specified, be used

Safety components are marked by the symbol  $\Delta$ .

## INFORMATION ABOUT LEAD-FREE SOLDERING

Philips CE is producing lead-free sets from 1.1.2005 onwards.

### IDENTIFICATION:

Regardless of special logo (not always indicated) one must treat all sets from **1 Jan 2005** onwards, according next rules:

- On our website [www.atyourservice.ce.Philips.com](http://www.atyourservice.ce.Philips.com) you find more information to:
  - \* BGA-de-/soldering (+ baking instructions)
  - \* Heating-profiles of BGAs and other ICs used in Philips-sets
  - \* Lead free

You will find this and more technical information within the "magazine", chapter "workshop news".

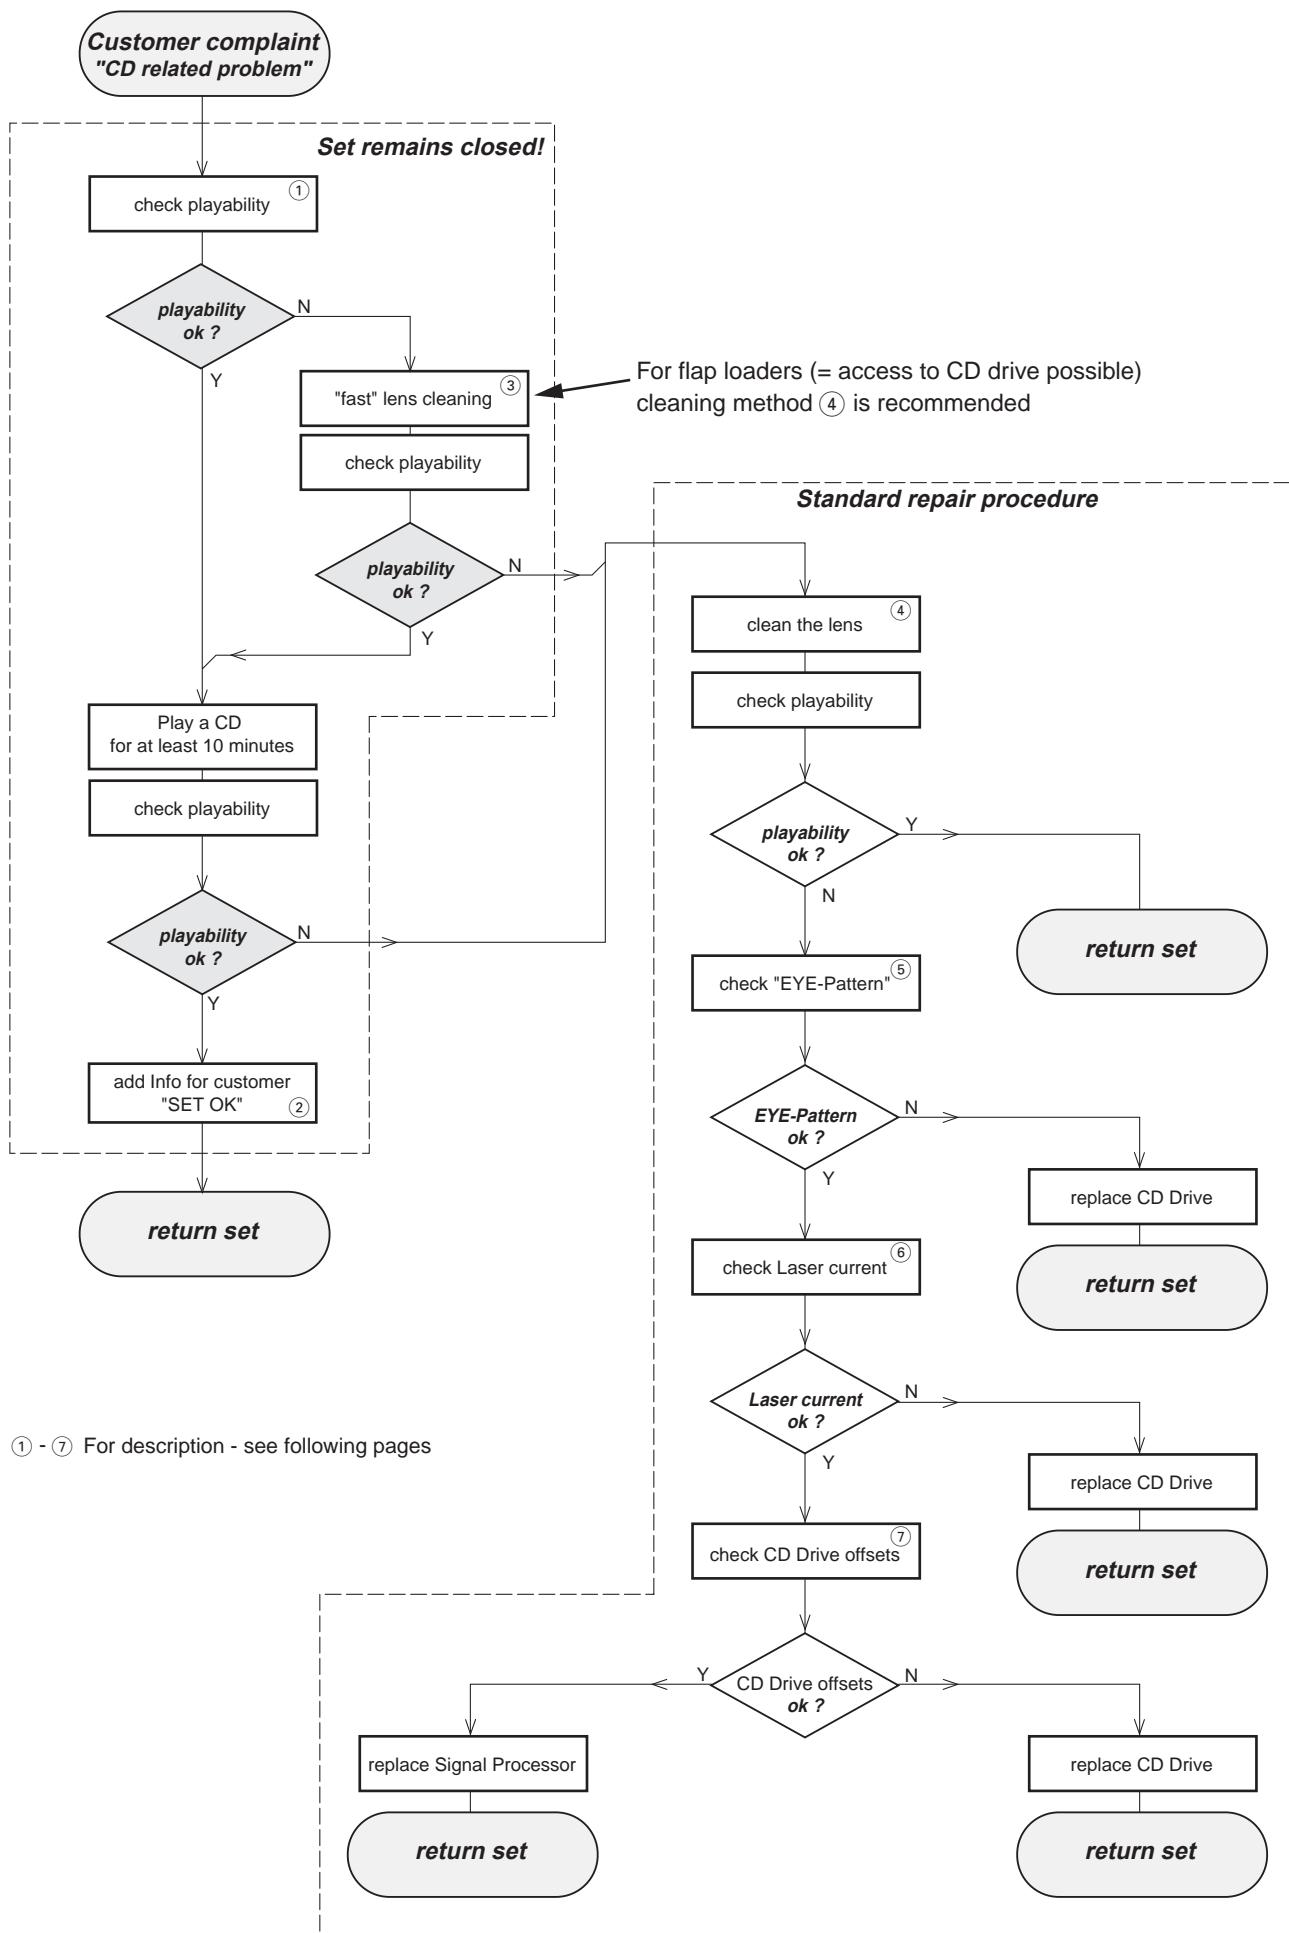

For additional questions please contact your local repair-helpdesk.

## SERVICE INSTRUCTION

Safety regulations require that after a repair, the set must be returned in its original condition. Pay in particular attention to the following points:

- Route the wire trees correctly and fix them with the mounted cable clamps.
- Check the insulation of the AC Power lead for external damage.
- Check the strain relief of the AC Power cord for proper function.
- Check the electrical DC resistance between the AC Power Plug and the secondary side (only for sets which have a AC Power isolated power supply):
- 1. Unplug the AC Power cord and connect a wire between the two pins of the AC Power plug.
- 2. Set the AC Power switch to the "on" position (keep the AC Power cord unplugged!).
- 3. Measure the resistance value between the pins of the AC Power plug and the metal shielding of the tuner or the aerial connection on the set. The reading should be larger than 4.5 Mohm (For U.S. it should be between 4.2 Mohm and 12 Mohm).
- 4. Switch "off" the set, and remove the wire between the two pins of the AC Power plug.
- Check the cabinet for defects, to avoid touching of any inner parts by the customer.

## INSTRUCTIONS ON CD PLAYABILITY

## INSTRUCTIONS ON CD PLAYABILITY

(1)

### PLAYABILITY CHECK

For sets which are compatible with **CD-RW** discs  
use CD-RW Printed Audio Disc ..... 7104 099 96611  
TR 3 (Fingerprint)  
TR 8 (600 $\mu$  Black dot) **maximum at 01:00**

- playback of these two tracks without audible disturbance  
playing time for: Fingerprint  $\geq$  10seconds  
Black dot from 00:50 to 01:10
- jump forward/backward (search) within a reasonable time

For all other sets  
use CD-DA SBC 444A ..... 4822 397 30245  
TR 14 (600 $\mu$  Black dot) **maximum at 01:15**  
TR 19 (Fingerprint)  
TR 10 (1000 $\mu$  wedge)

- playback of all these tracks without audible disturbance  
playing time for: 1000 $\mu$  wedge  $\geq$  10seconds  
Fingerprint  $\geq$  10seconds  
Black dot from 01:05 to 01:25
- jump forward/backward (search) within a reasonable time

(2)

### CUSTOMER INFORMATION

It is proposed to add an addendum sheet to the set which informs the customer that the set has been checked carefully - but no fault was found.  
The problem was obviously caused by a scratched, dirty or copy-protected CD. In case problems remain, the customer is requested to contact the workshop directly.  
The lens cleaning (method ③) should be mentioned in the addendum sheet.

The final wording in national language as well as the printing is under responsibility of the Regional Service Organizations.

(4)

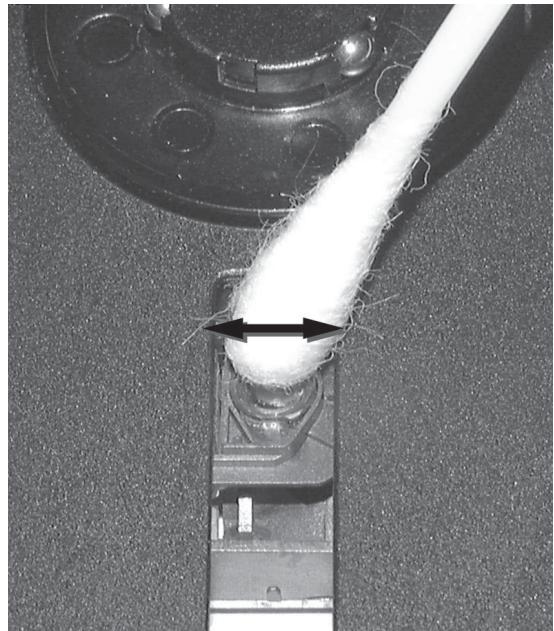

### LIQUID LENS CLEANING

Before touching the lens it is advised to clean the surface of the lens by blowing clean air over it.  
This to avoid that little particles make scratches on the lens.

Because the material of the lens is synthetic and coated with a special anti-reflectivity layer, cleaning must be done with a non-aggressive cleaning fluid. It is advised to use "Cleaning Solvent B4-No2", available with codenumber 4822 389 10026.

The actuator is a very precise mechanical component and may not be damaged in order to guarantee its full function. Clean the lens gently (don't press too hard) with a soft and clean cotton bud moistened with the special lens cleaner.

The direction of cleaning must be in the way as indicated in the picture below.

(3)

### FAST LENS CLEANING (*dry brush*)

Use lens cleaning CD  
SBC AC300 ..... 9082 100 00043

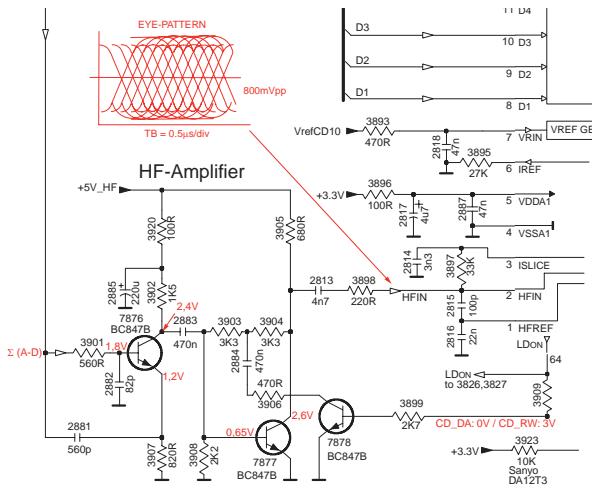

Insert the lens cleaning CD, press PLAY and follow the voice guide's instructions on the CD.

## **INSTRUCTIONS ON CD PLAYABILITY**

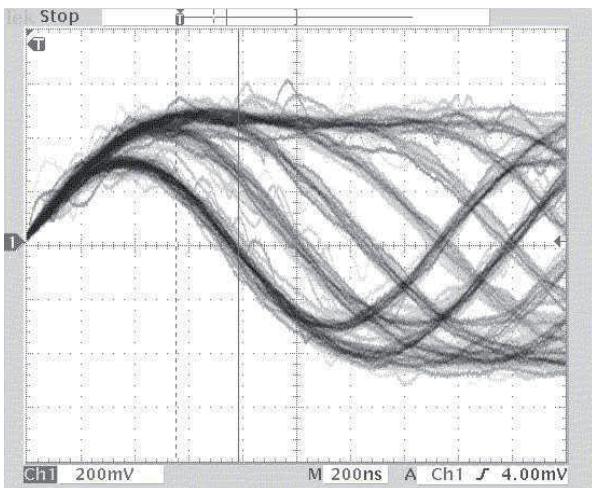

5

## EYE-PATTERN SIGNAL – JITTER MEASUREMENT

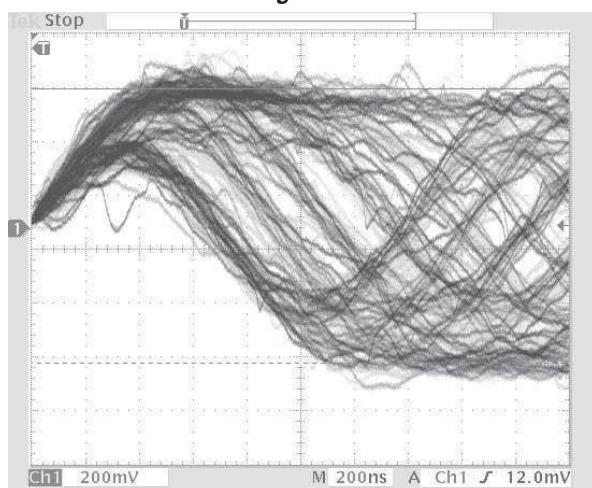

Measure the signal on the input of the Signal processor using an **analog** oscilloscope. Please find the exact measuring point in your Service Manual.

See below examples of the signal. Amplitude should read at least 700mVpp using SBC444A.

*good*

had

If the oscilloscope shows a signal like the 'bad' one, and/or the amplitude decreases within 1 minute - the CD drive has to be replaced.

6

## **CD DRIVE – LASER CURRENT MEASUREMENT**

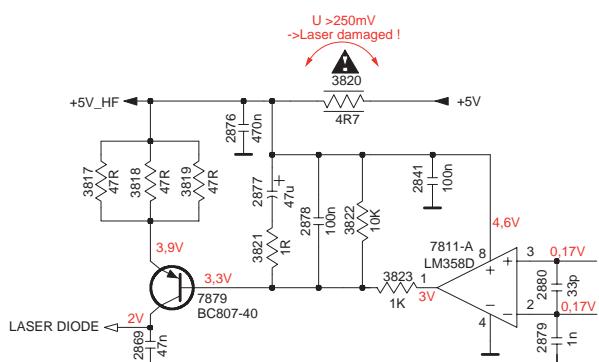

The laser current can be measured as a voltage drop on a resistor. The resistor is marked in every Service Manual. The value depends on the type of CD drive.

	typical value	most probable defect
VAMxxxx	: 150-230mV	$\geq$ 350mV
MCDxx	: 170-230mV	$\geq$ 300mV
DA1x	: 210-250mV	$\geq$ 350mV
DA2x	: 175-200mV	$\geq$ 250mV

Use SBC444A (CD-DA) for measurement.

Use SBC444A (CD-DA) for measurement.

## Laser power control

7

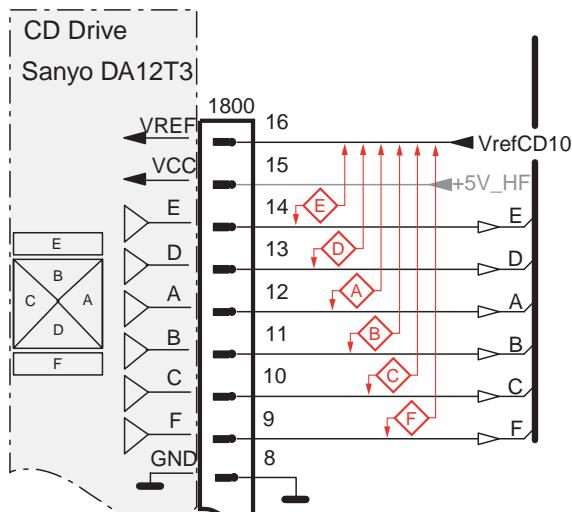

## **CD DRIVE – OFFSET MEASUREMENT**

The photodiodes of the CD-drive may have an offset. These offsets have to be compensated by the signal processor. High offsets can lead to poor playability of some CDs (skipping tracks).

To measure the offset values, start the **Service Test Program** - section “Focus Test” without a CD.

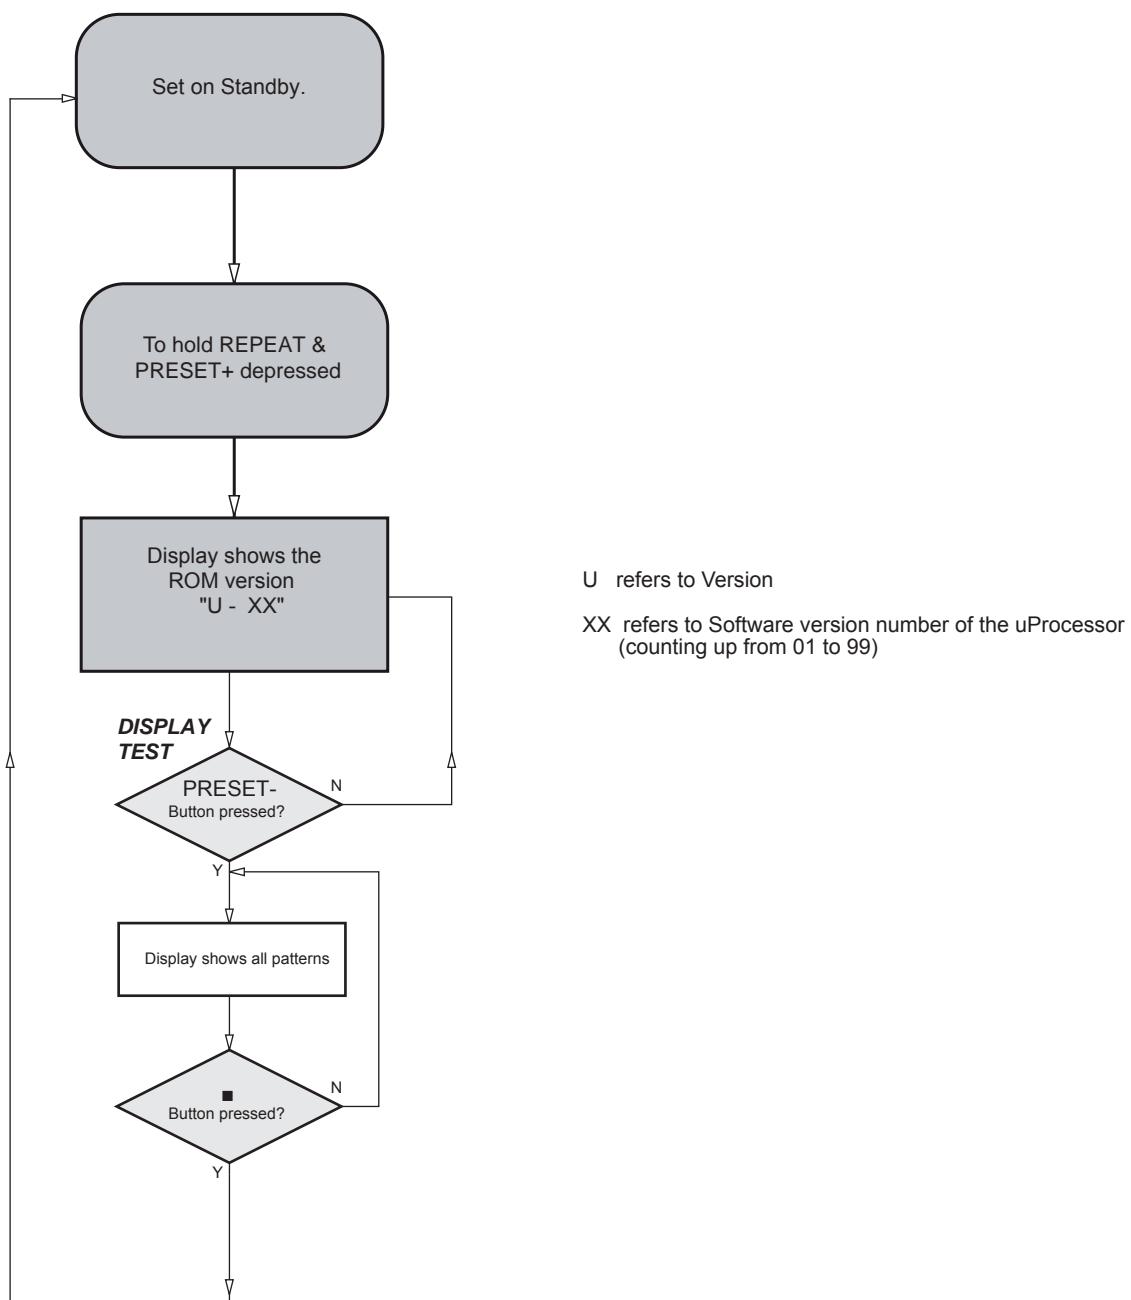

The offsets can be measured with a DC Millivoltmeter directly on the connector (see drawing below). Pin numbering varies from drive to drive.

The values from diode A-D should read  $0\pm10\text{mV}$ .  
Diodes E and F are less critical.

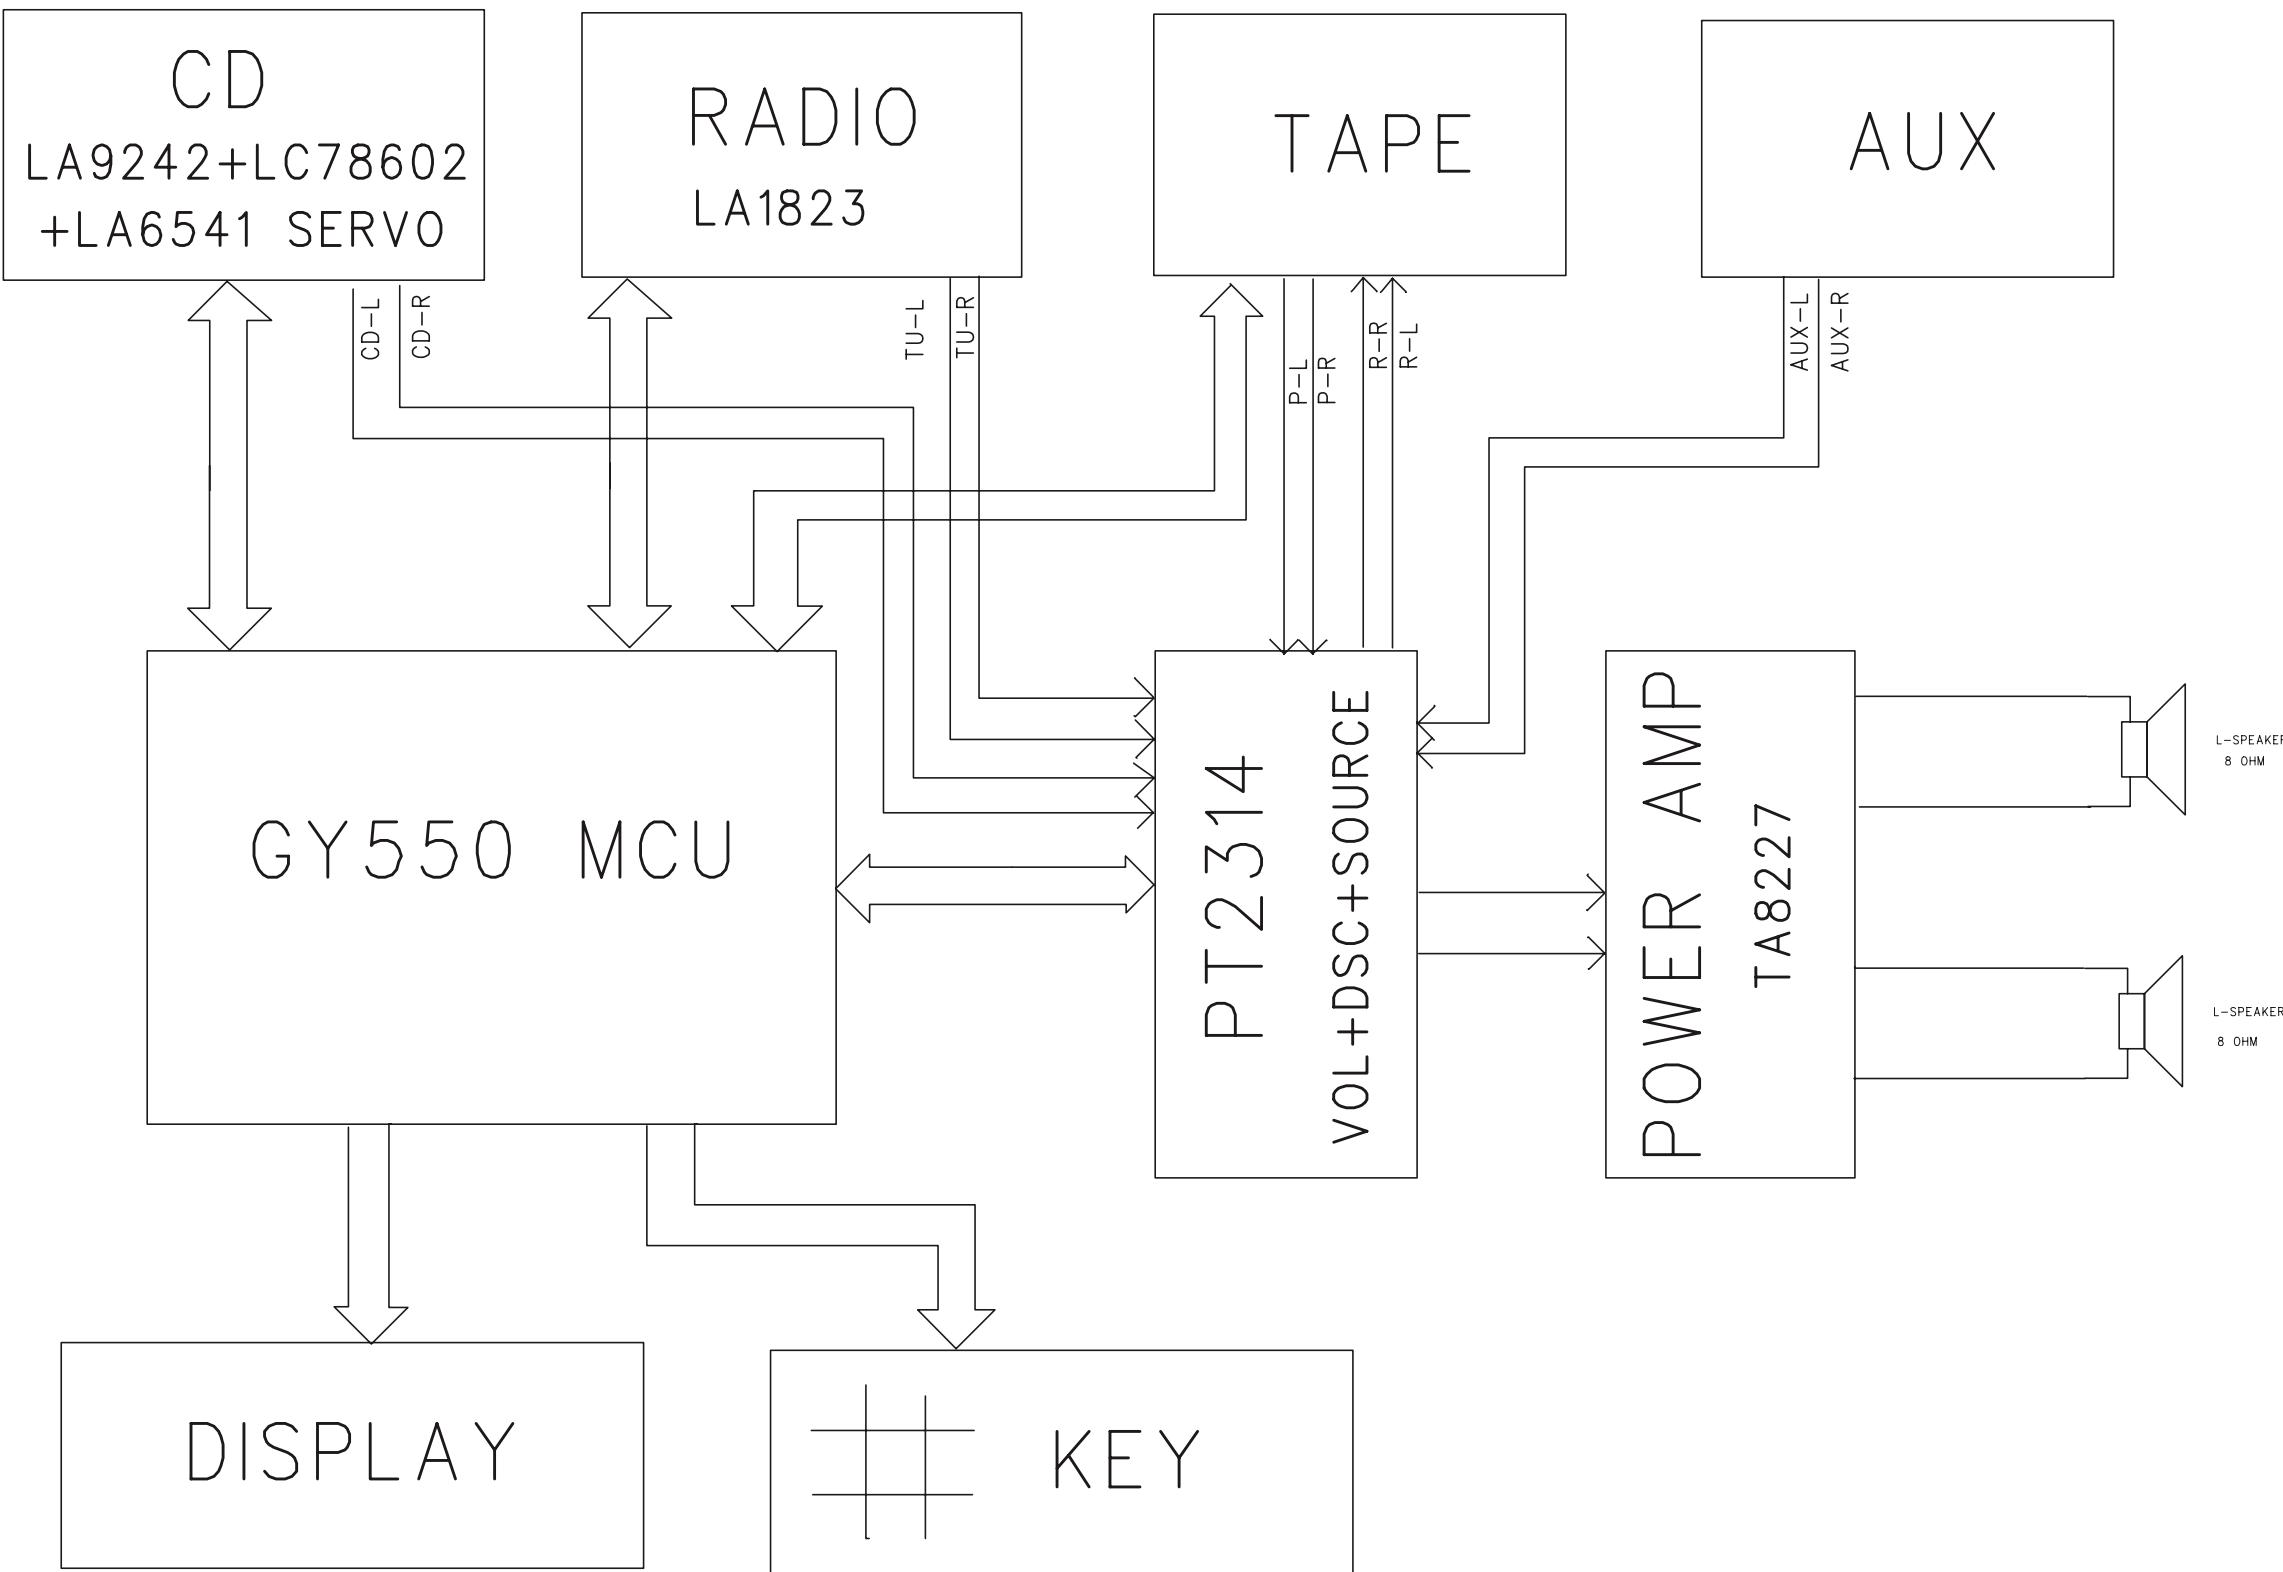

If one of the offsets is higher than  $\pm 10\text{mV}$  the CD drive has to be replaced. Otherwise replace the Signal Processor.
