LOCATION OF PCB BOARDS

VERSION VARIATION:

Type / Versions:	MCD106
Features & Board in used	/94
Composite video out	X
Voltage (Dual)	X
AC line cord (fixed)	X

SPECIFICATIONS

Picture

Aspect ratio 4:3, 16:9
 D/A Converter 10 bit, 108 MHz]

Sound

Signal to noise ratio 90 dB, A-weight
 Distortion and Noise 1 kHz 0.2%
 Sound System Dolby Digital

Convenience

Child protection Rating Level

Power

Power supply 110-240V, 50-60 Hz
 Standby power consumption < 1.5 W
 Power consumption 8 W

Cabinet

Dimensions (W x H x D) 218 x 90 x 221.5 mm
 Net Weight 1.095 kg
 Packaging Dimensions (H x W x D) 248 x 267 x 130 mm
 Gross weight 1.5 kg

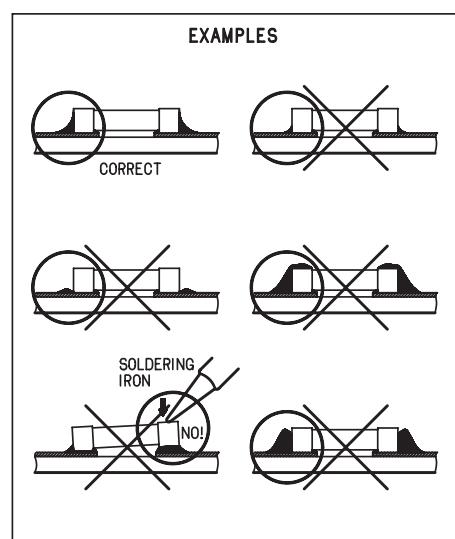

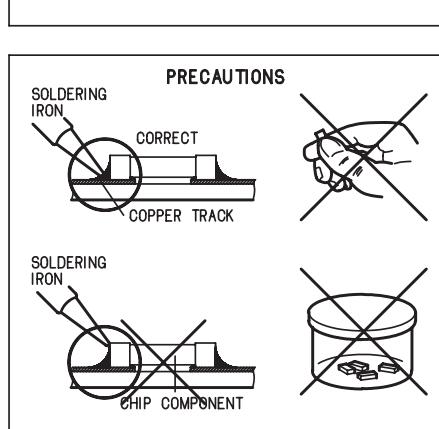

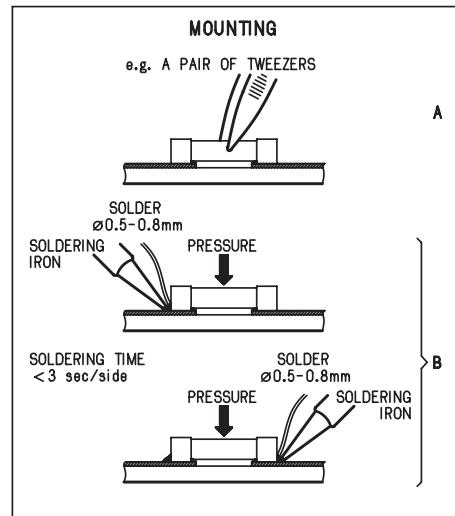

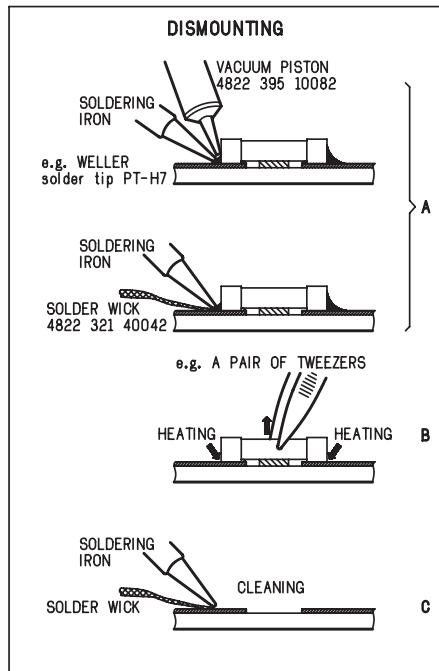

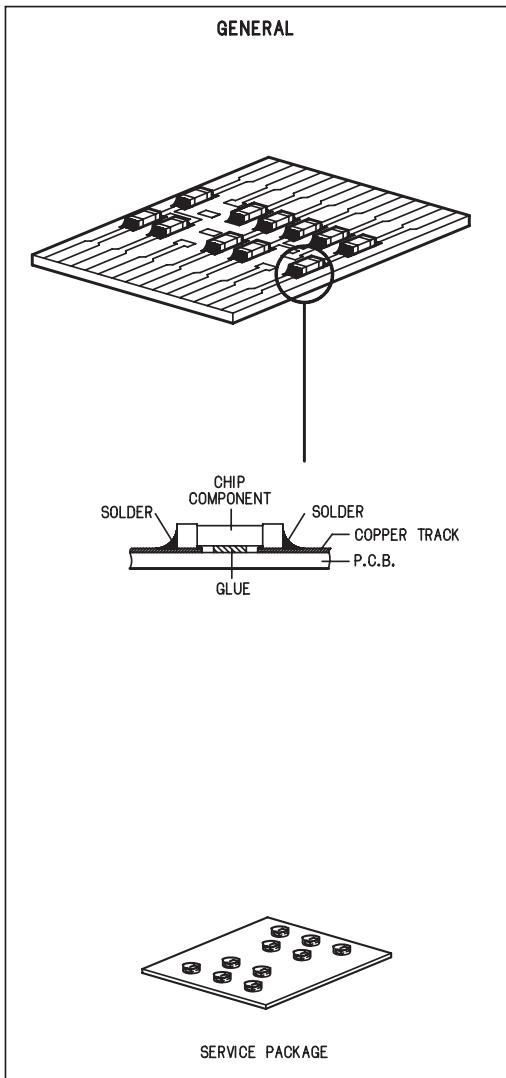

Specifications and external appearance are subject to change without notice.

WARNING

All ICs and many other semi-conductors are susceptible to electrostatic discharges (ESD). Careless handling during repair can reduce life drastically.

When repairing, make sure that you are connected with the same potential as the mass of the set via a wrist wrap with resistance. Keep components and tools also at this potential.

ESD

Safety regulations require that the set be restored to its original condition and that parts which are identical with those specified, be used

Safety components are marked by the symbol Δ .

INFORMATION ABOUT LEAD-FREE SOLDERING

Philips CE is producing lead-free sets from 1.1.2005 onwards.

IDENTIFICATION:

Regardless of special logo (not always indicated) one must treat all sets from **1 Jan 2005** onwards, according next rules:

- On our website www.atyourservice.ce.Philips.com you find more information to:
 - * BGA-de-/soldering (+ baking instructions)
 - * Heating-profiles of BGAs and other ICs used in Philips-sets
 - * Lead free

You will find this and more technical information within the "magazine", chapter "workshop news".

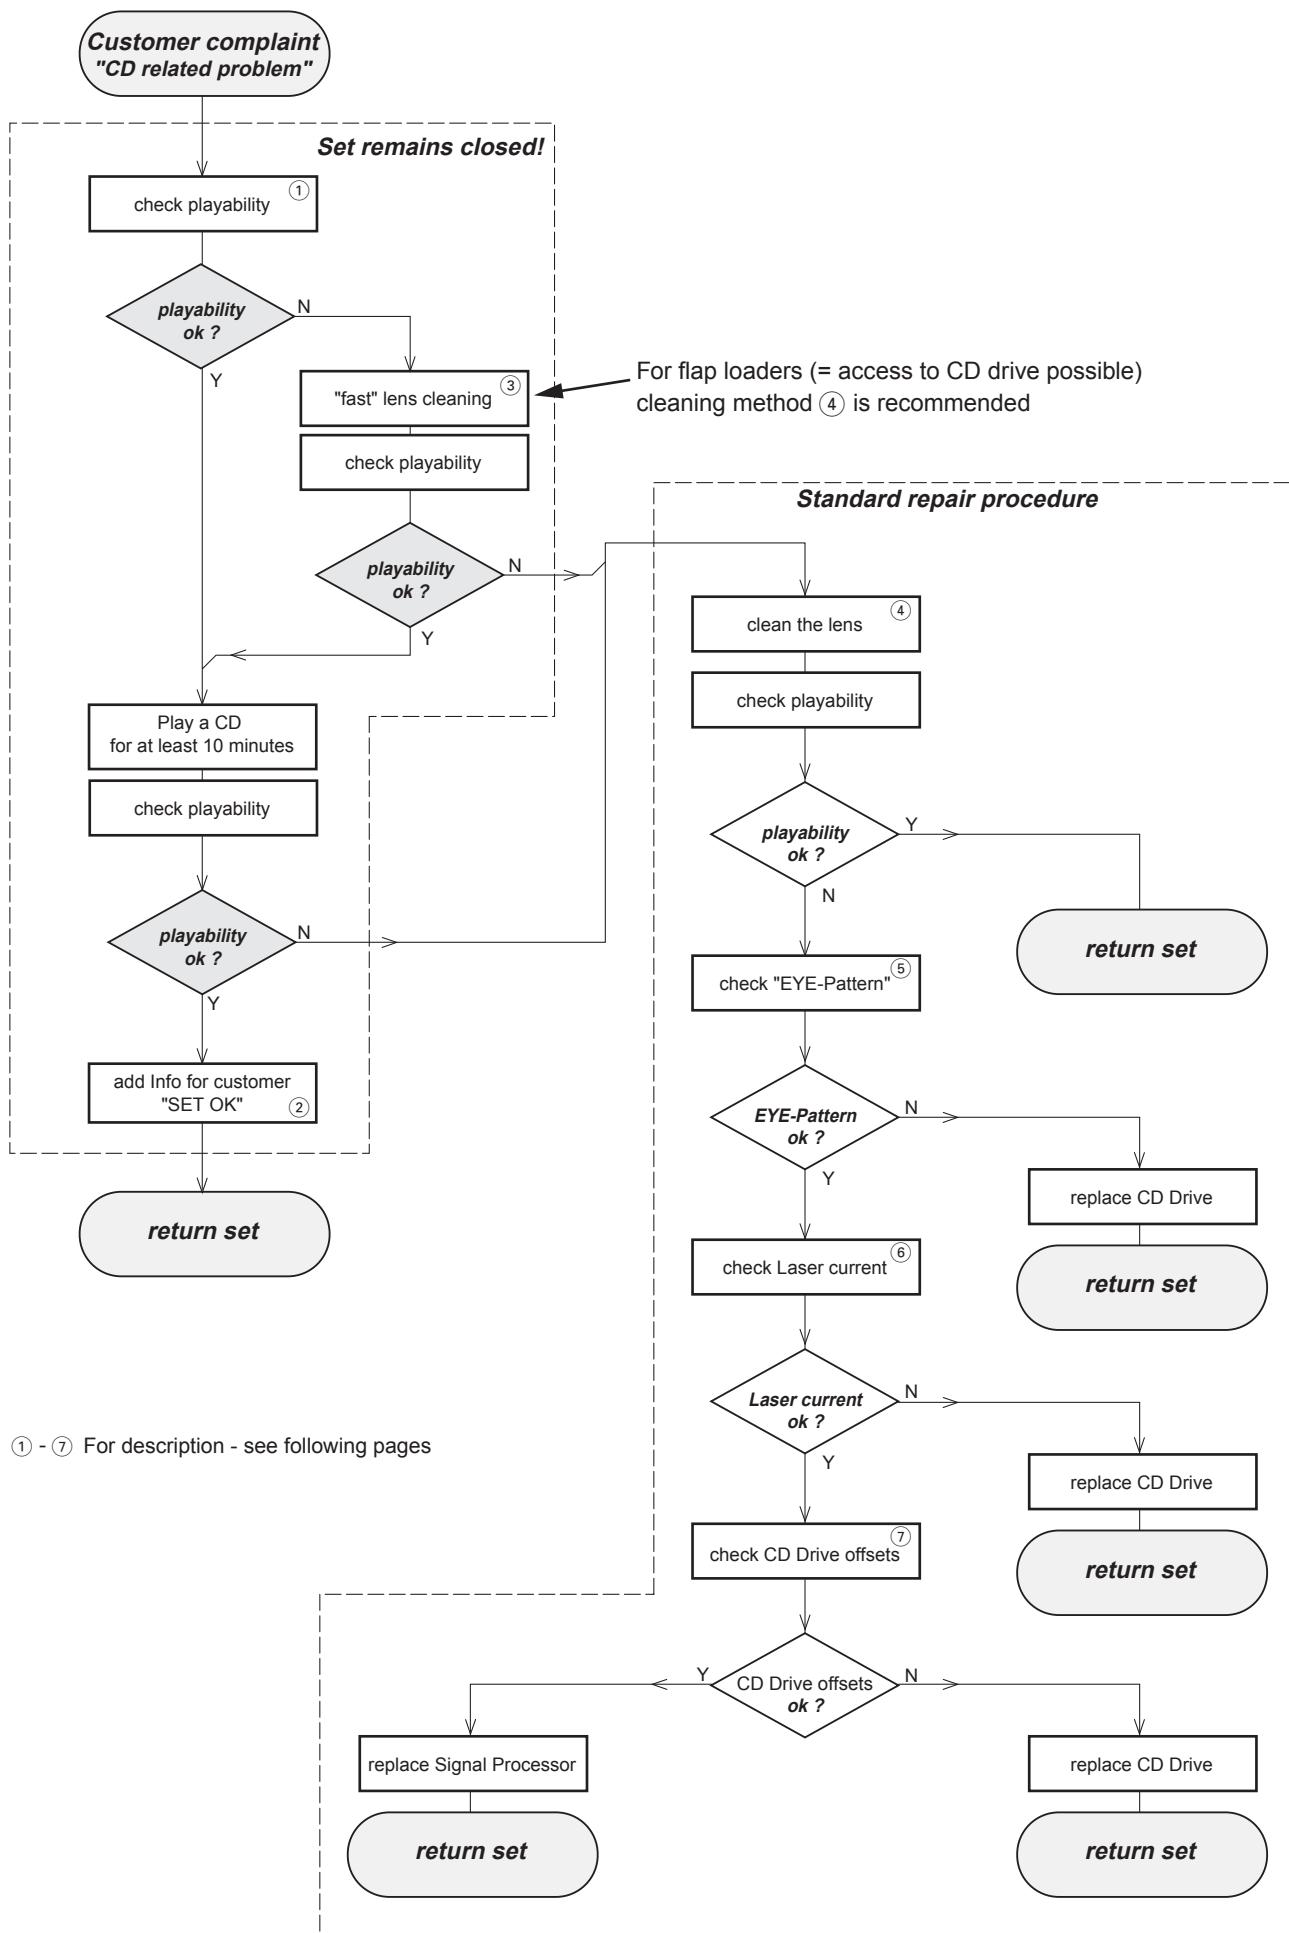

For additional questions please contact your local repair-helpdesk.

SERVICE INSTRUCTION

Safety regulations require that after a repair, the set must be returned in its original condition. Pay in particular attention to the following points:

- Route the wire trees correctly and fix them with the mounted cable clamps.
- Check the insulation of the AC Power lead for external damage.
- Check the strain relief of the AC Power cord for proper function.
- Check the electrical DC resistance between the AC Power Plug and the secondary side (only for sets which have a AC Power isolated power supply):
- 1. Unplug the AC Power cord and connect a wire between the two pins of the AC Power plug.
- 2. Set the AC Power switch to the "on" position (keep the AC Power cord unplugged!).
- 3. Measure the resistance value between the pins of the AC Power plug and the metal shielding of the tuner or the aerial connection on the set. The reading should be larger than 4.5 Mohm (For U.S. it should be between 4.2 Mohm and 12 Mohm).
- 4. Switch "off" the set, and remove the wire between the two pins of the AC Power plug.
- Check the cabinet for defects, to avoid touching of any inner parts by the customer.

INSTRUCTIONS ON CD PLAYABILITY

① - ⑦ For description - see following pages

INSTRUCTIONS ON CD PLAYABILITY

(1)

PLAYABILITY CHECK

For sets which are compatible with **CD-RW** discs
use CD-RW Printed Audio Disc 7104 099 96611
TR 3 (Fingerprint)
TR 8 (600 μ Black dot) **maximum at 01:00**

- playback of these two tracks without audible disturbance
playing time for: Fingerprint \geq 10seconds
Black dot from 00:50 to 01:10
- jump forward/backward (search) within a reasonable time

For all other sets
use CD-DA SBC 444A 4822 397 30245
TR 14 (600 μ Black dot) **maximum at 01:15**
TR 19 (Fingerprint)
TR 10 (1000 μ wedge)

- playback of all these tracks without audible disturbance
playing time for: 1000 μ wedge \geq 10seconds
Fingerprint \geq 10seconds
Black dot from 01:05 to 01:25
- jump forward/backward (search) within a reasonable time

(2)

CUSTOMER INFORMATION

It is proposed to add an addendum sheet to the set which informs the customer that the set has been checked carefully - but no fault was found.
The problem was obviously caused by a scratched, dirty or copy-protected CD. In case problems remain, the customer is requested to contact the workshop directly.
The lens cleaning (method ③) should be mentioned in the addendum sheet.

The final wording in national language as well as the printing is under responsibility of the Regional Service Organizations.

(4)

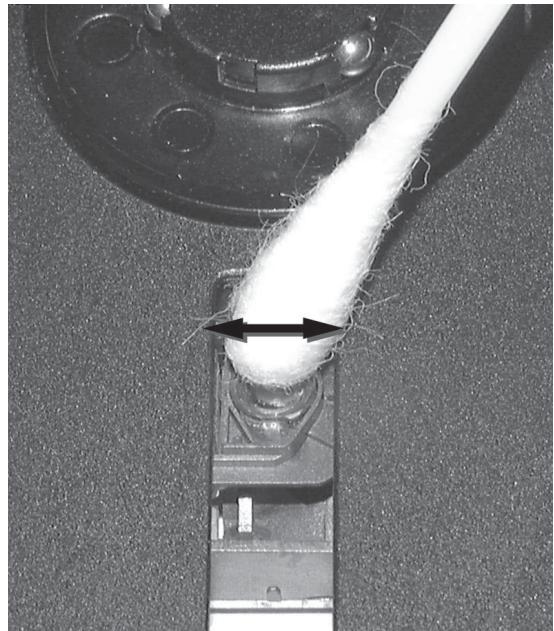

LIQUID LENS CLEANING

Before touching the lens it is advised to clean the surface of the lens by blowing clean air over it.
This to avoid that little particles make scratches on the lens.

Because the material of the lens is synthetic and coated with a special anti-reflectivity layer, cleaning must be done with a non-aggressive cleaning fluid. It is advised to use "Cleaning Solvent B4-No2", available with codenumber 4822 389 10026.

The actuator is a very precise mechanical component and may not be damaged in order to guarantee its full function. Clean the lens gently (don't press too hard) with a soft and clean cotton bud moistened with the special lens cleaner.

The direction of cleaning must be in the way as indicated in the picture below.

(3)

FAST LENS CLEANING (*dry brush*)

Use lens cleaning CD
SBC AC300 9082 100 00043

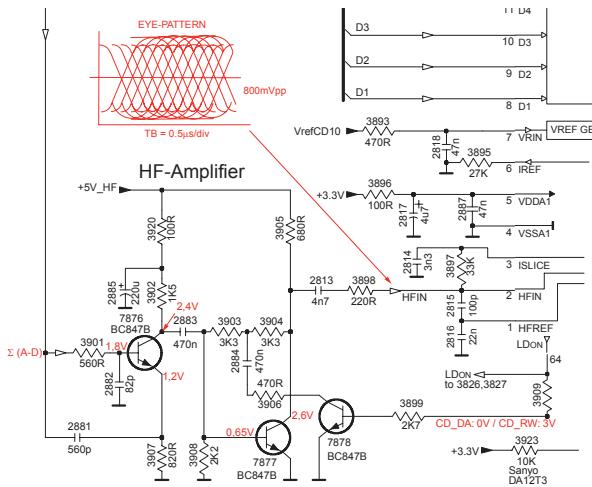

Insert the lens cleaning CD, press PLAY and follow the voice guide's instructions on the CD.

INSTRUCTIONS ON CD PLAYABILITY

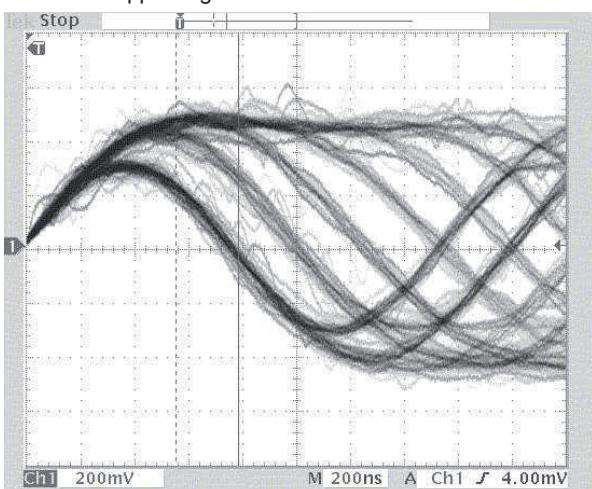

5

EYE-PATTERN SIGNAL – JITTER MEASUREMENT

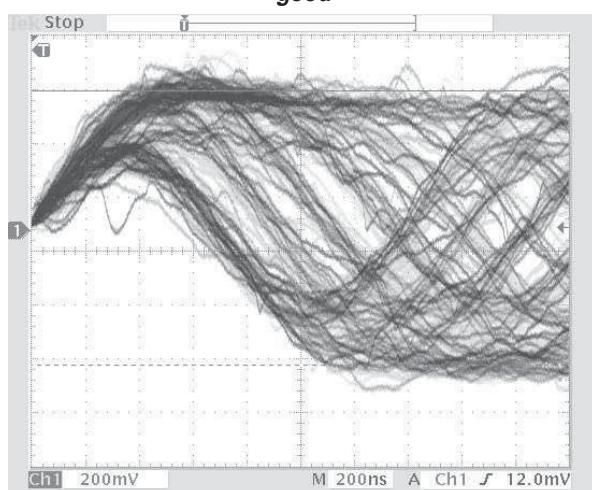

Measure the signal on the input of the Signal processor using an **analog** oscilloscope. Please find the exact measuring point in your Service Manual.

See below examples of the signal. Amplitude should read at least 700mVpp using SBC444A.

good

had

If the oscilloscope shows a signal like the 'bad' one, and/or the amplitude decreases within 1 minute - the CD drive has to be replaced.

6

CD DRIVE – LASER CURRENT MEASUREMENT

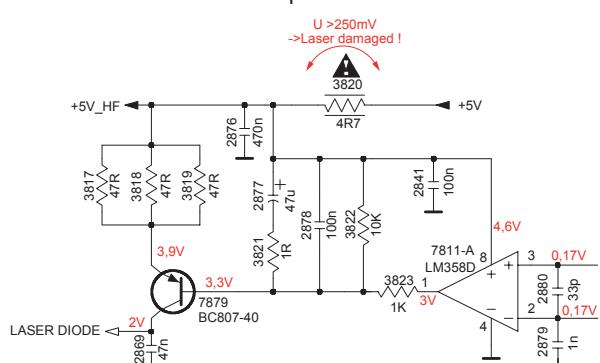

The laser current can be measured as a voltage drop on a resistor. The resistor is marked in every Service Manual. The value depends on the type of CD drive.

	typical value	most probable defect
VAMxxxx	: 150-230mV	\geq 350mV
MCDxx	: 170-230mV	\geq 300mV
DA1x	: 210-250mV	\geq 350mV
DA2x	: 175-200mV	\geq 250mV

Use SBC444A (CD-DA) for measurement.

Use SBC444A (CD-DA) for measurement.

Laser power control

7

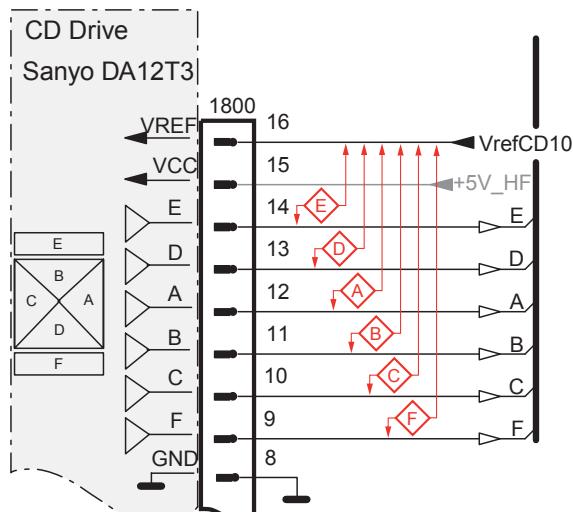

CD DRIVE – OFFSET MEASUREMENT

The photodiodes of the CD-drive may have an offset. These offsets have to be compensated by the signal processor. High offsets can lead to poor playability of some CDs (skipping tracks).

To measure the offset values, start the **Service Test Program** - section “Focus Test” without a CD.

The offsets can be measured with a DC Millivoltmeter directly on the connector (see drawing below). Pin numbering varies from drive to drive.

The values from diode A-D should read $0\pm10\text{mV}$.
Diodes E and F are less critical.

If one of the offsets is higher than $\pm 10\text{mV}$ the CD drive has to be replaced. Otherwise replace the Signal Processor.

System , Region Code , etc. Setting Procedure

1) System Reset

- (1) System reset
 - a) Press "setup" button on R/C, TV will show the "setup" menu.
 - b) Select the menu using the ▼ on R/C.
 - c) Select default to restore system setting.

remark: But can't restore region code default setting.

(2) Region code reset

- a) Open CD Door.
- b) Press "stop" button on RC, then press "0000" TV Display "DEFAULT".
- c) The system will switch to standby when finished, and region code will be default setting.

2) Region Code Change

- a) Press "5168" on R/C in open mode.
- b) Use "▼" "▲" on R/C to select desired region code in customer page.
- c) Press "OK" to confirm:

1	USA
2	EU
3	AP
4	Australia, NZ, Latam
5	Russia, INDIA
6	CHINA

3) Password Change

- a) Press "setup" button on R/C, TV shows the "setup" menu.
- b) Press "▶" to select "password", then press "▶/OK".

* 0000 is default password supplied.

4) Check on the Software Version

- a) Open the CD door.
- b) Press "stop 159" button on R/C.
- c) TV will show the version on screen.

5) Upgrading new software

- a) Open the CD door, then insert the CD-R program disc.
- b) Close the CD door.
- c) TV will show the upgrade prompt menu, and the system will auto upgrading, the system will switch to standby when finish upgrading.

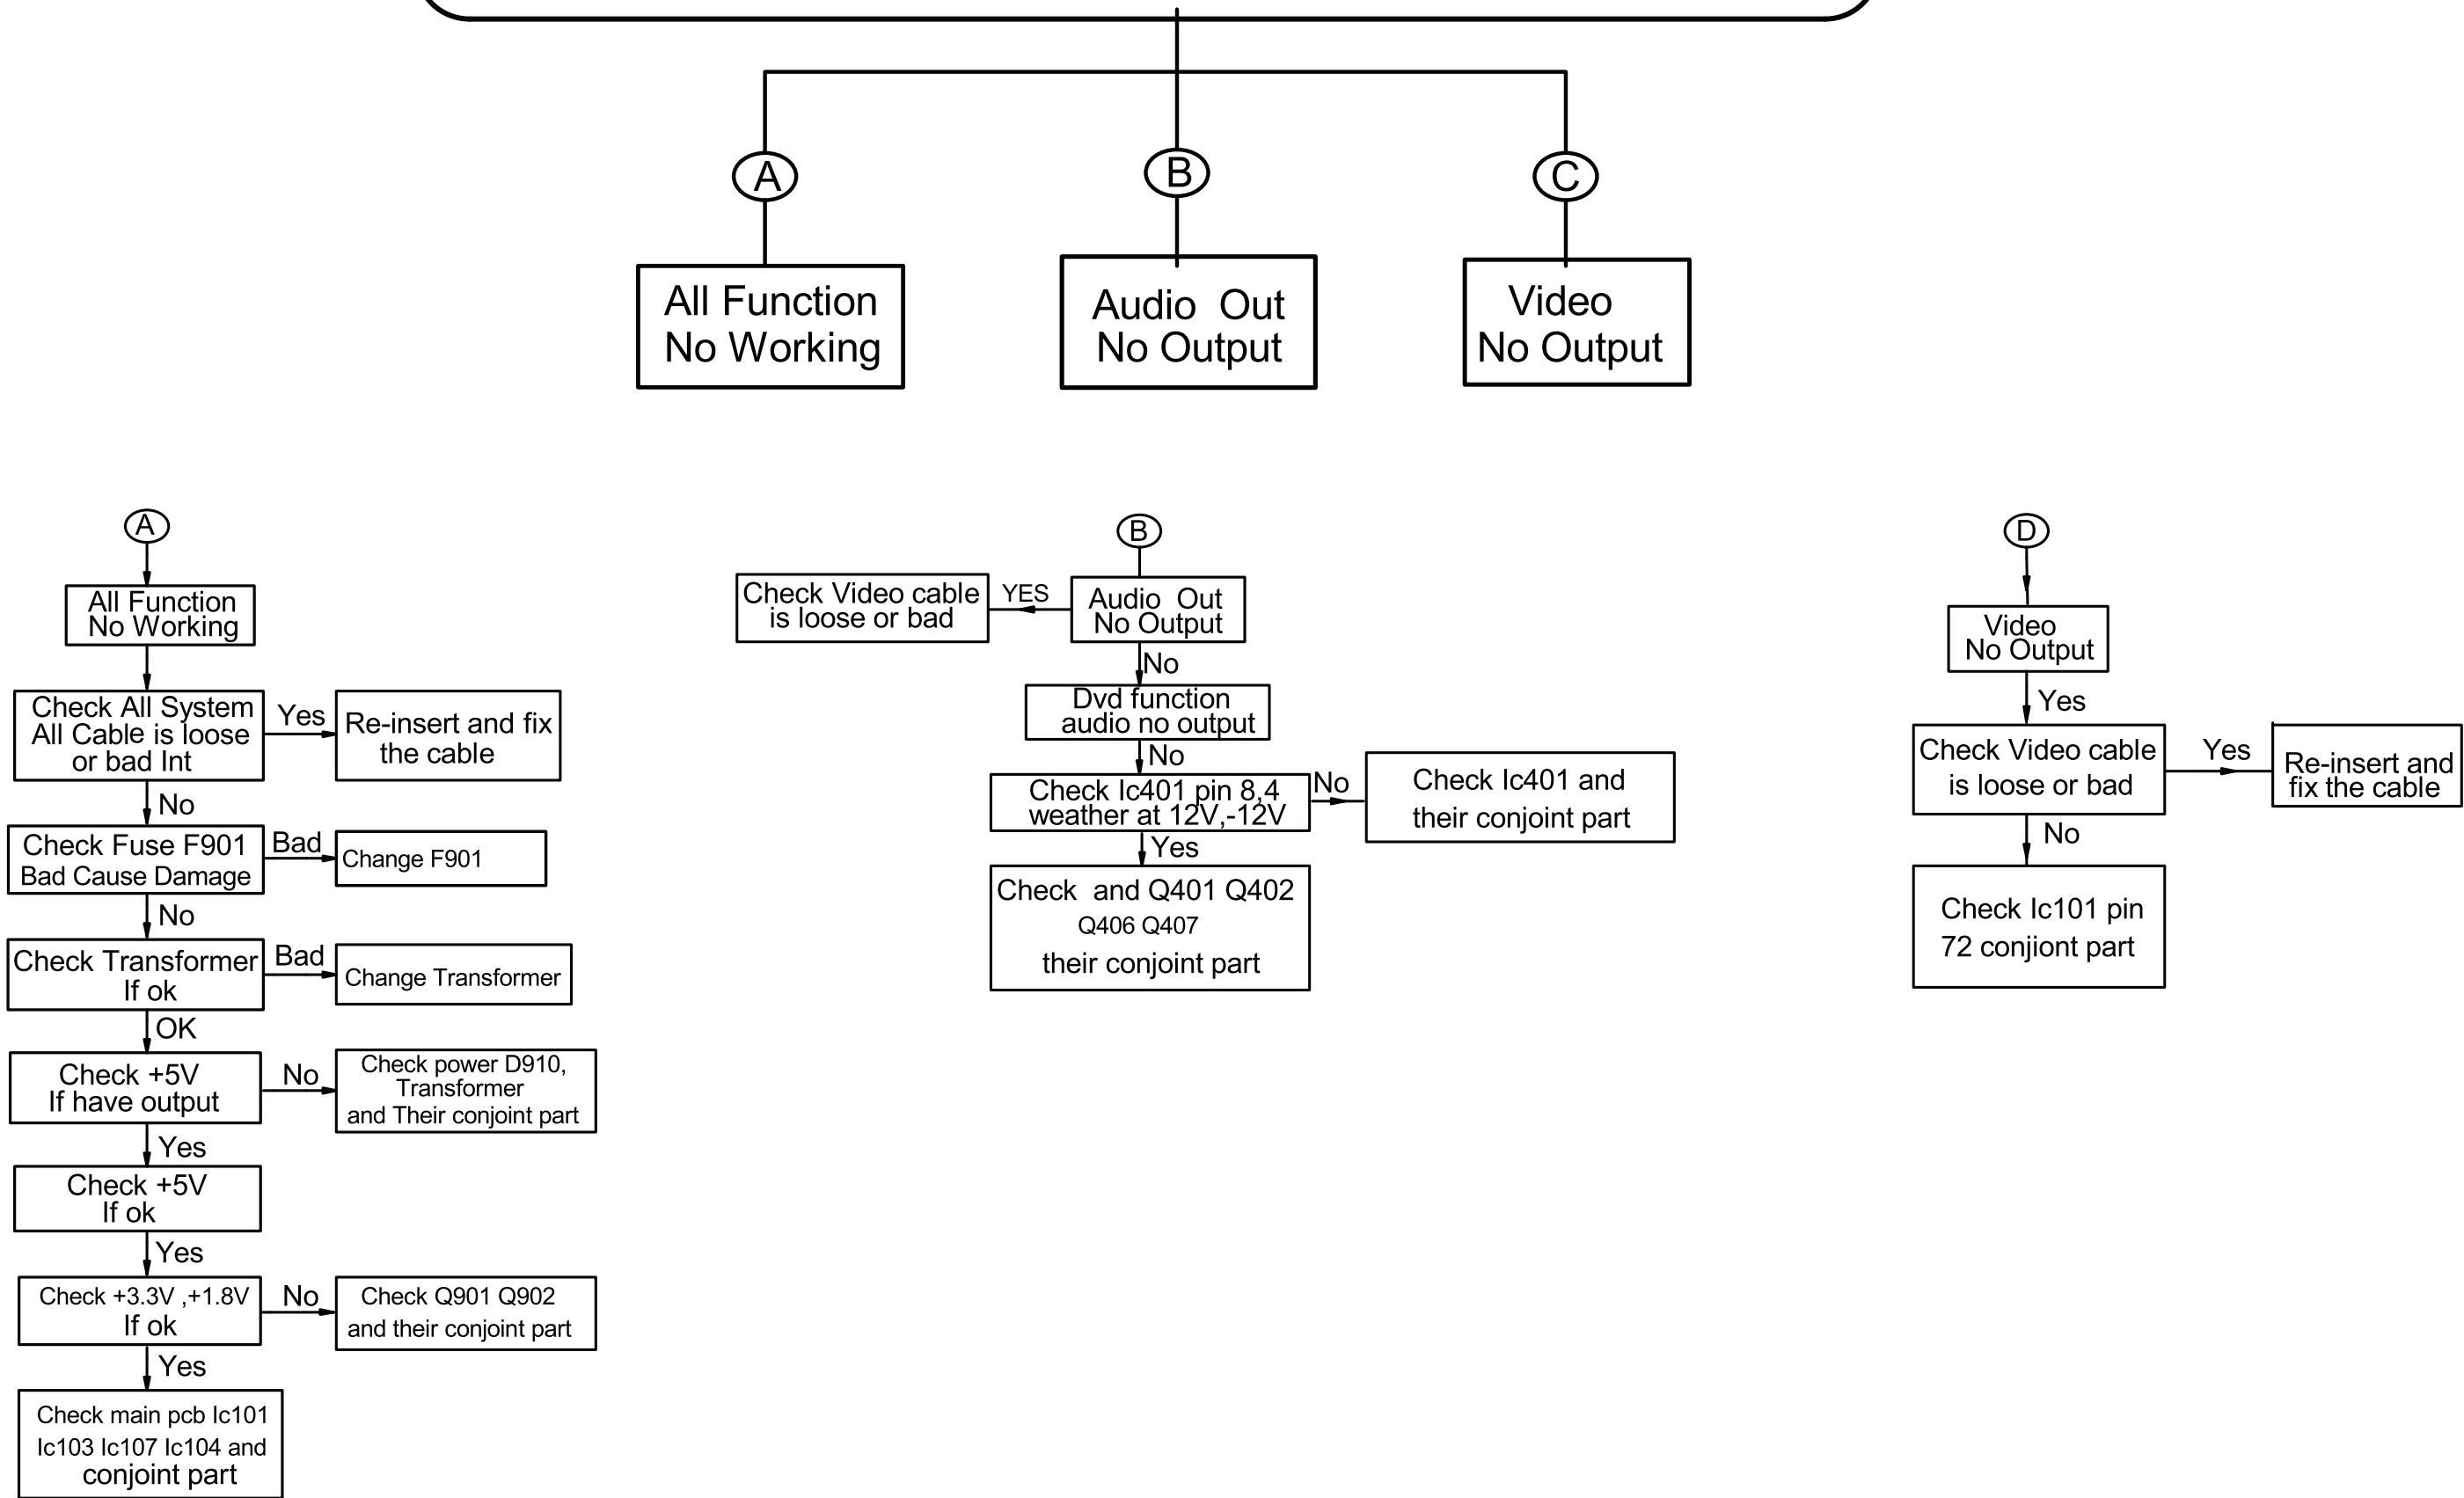

* the latest upgraded is in version VER 070602.

CAUTION !

This information is confidential and may not be distributed. Only a qualified service person should reprogram the Region Code.

REPAIR INSTRUTOR

MAIN UNIT REPAIR CHART

DISASSEMBLY INSTRUCTIONS

Dismantling the Outer Cover

- 1) Loosen 6 screws "A" as shown in figure 1 to remove bottom cover.

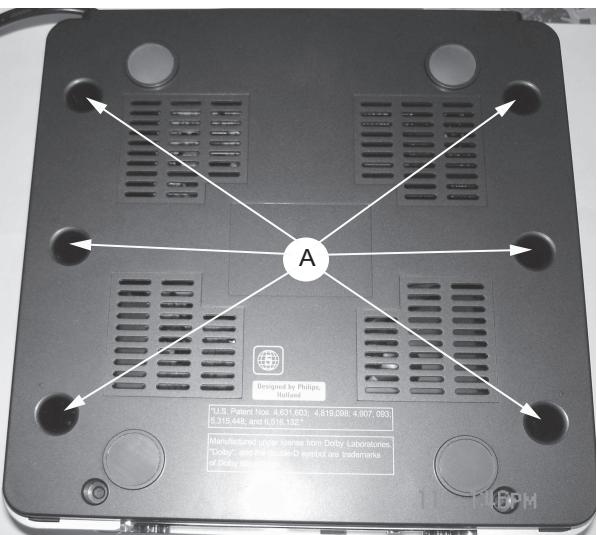

figure 1

Dismantling the Power Board

- 1) Loosen 2 screws "D" at the Power Board as shown in figure 4 to remove the Power Board.

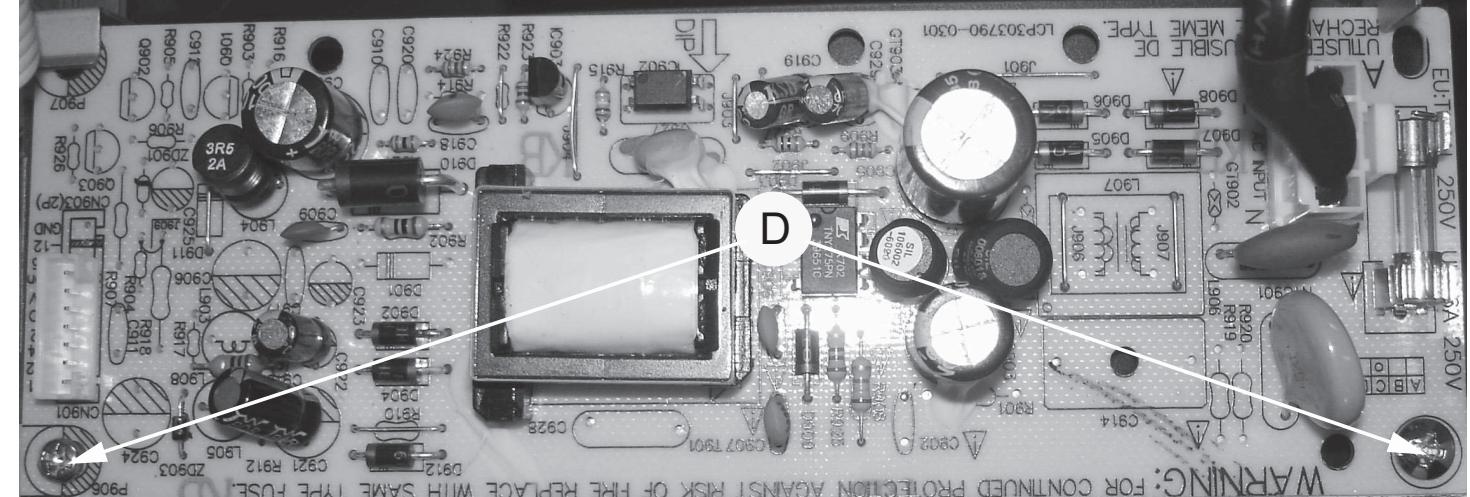

figure 4

Dismantling the Main Board

- 1) Loosen 1 screw "B" at the back panel as shown in figure 2.
- 2) Loosen 1 screw "C" at the Main Board as shown in figure 3.

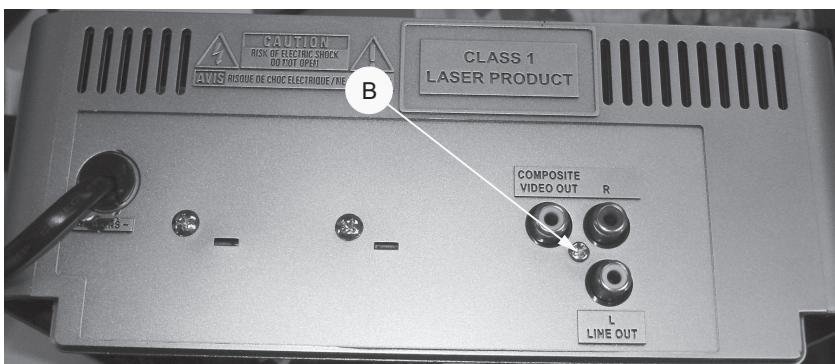

figure 2

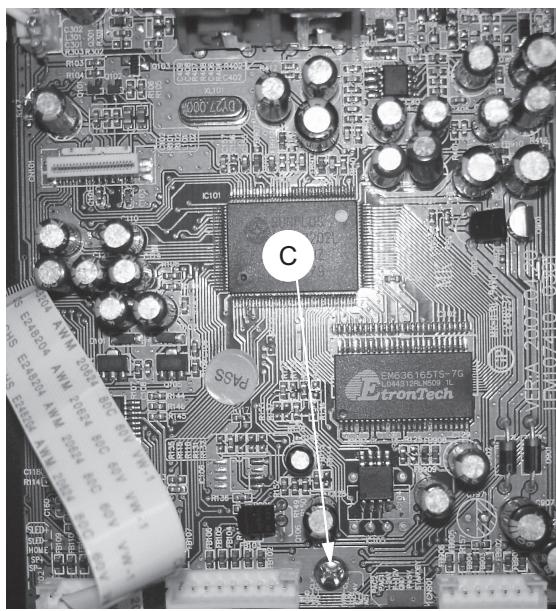

figure 3

Dismantling the Control Board

- 1) Loosen 7 screws "E" at the KEY Panel as shown in figure 5.
- 2) Loosen 6 screws "F" at the VFD Panel as shown in figure 6.

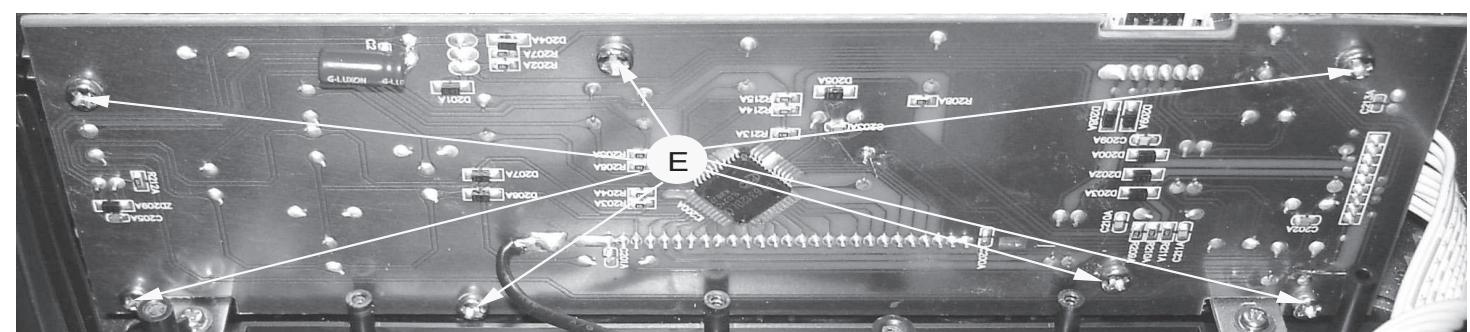

figure 5

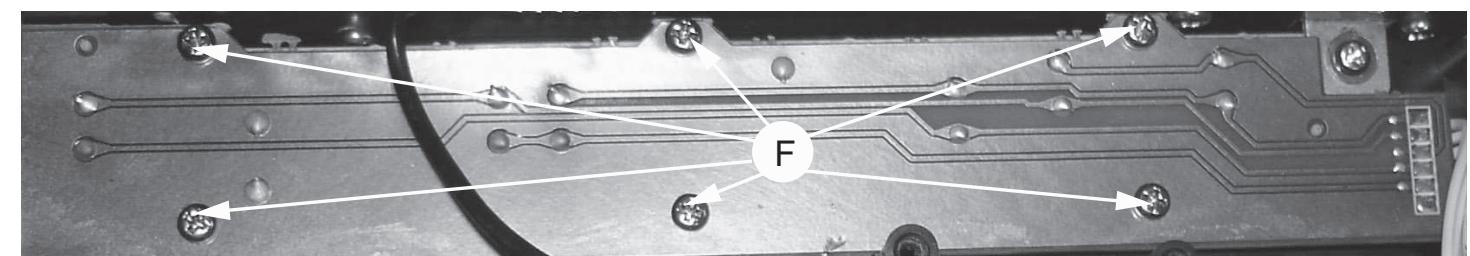

figure 6

Dismantling the DVD Module

- 1) Loosen 2 screws "G" as shown in figure 7, and 2 screws "H" at back panel as shown in figure 8 to remove DVD loader bracket.
 2) Loosen 4 screws "I" at DVD loader as shown in figure 9.

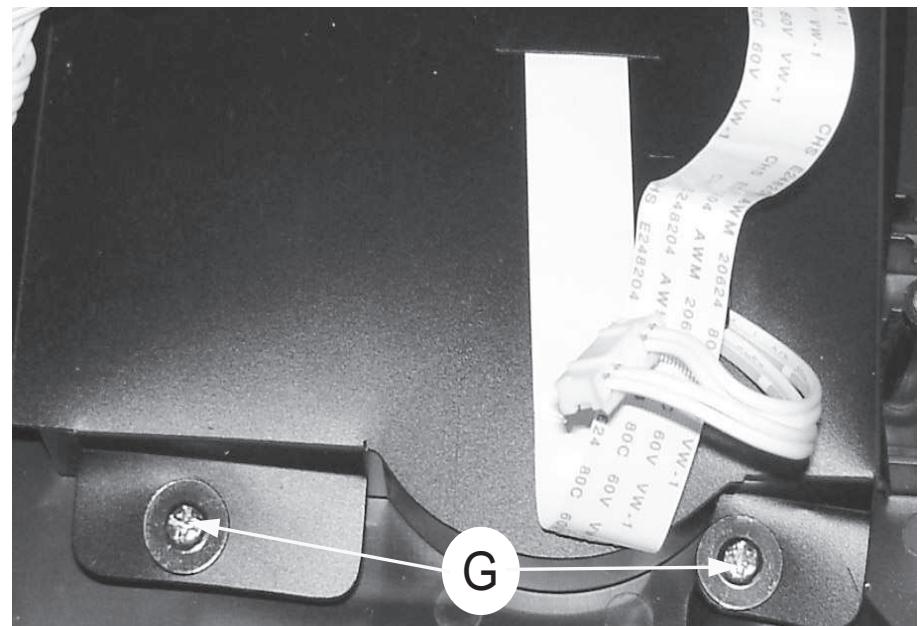

figure 7

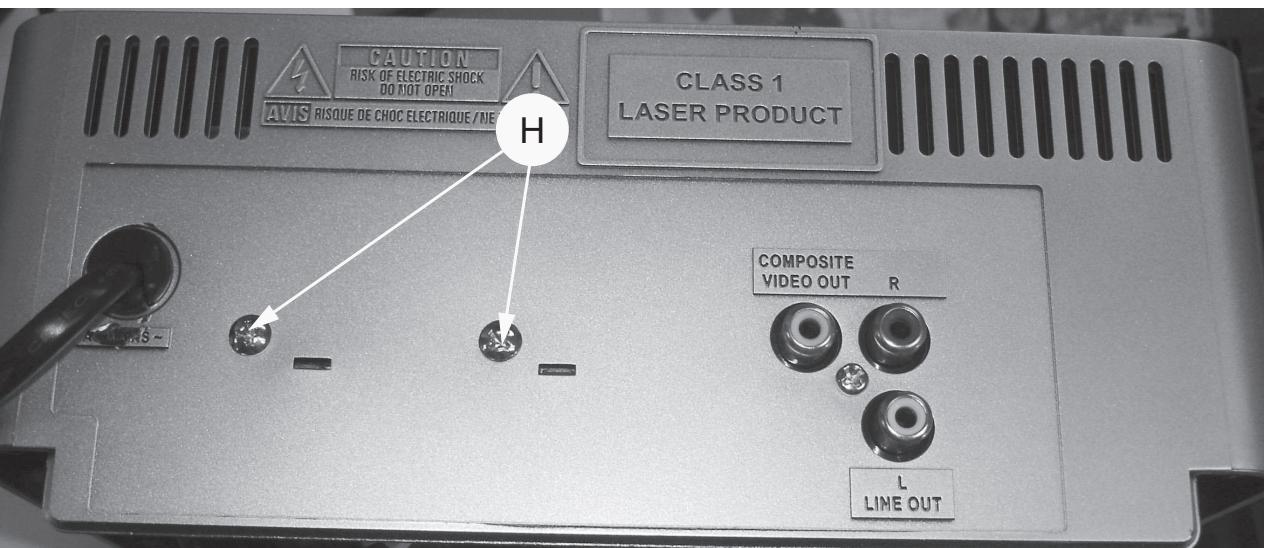

figure 8

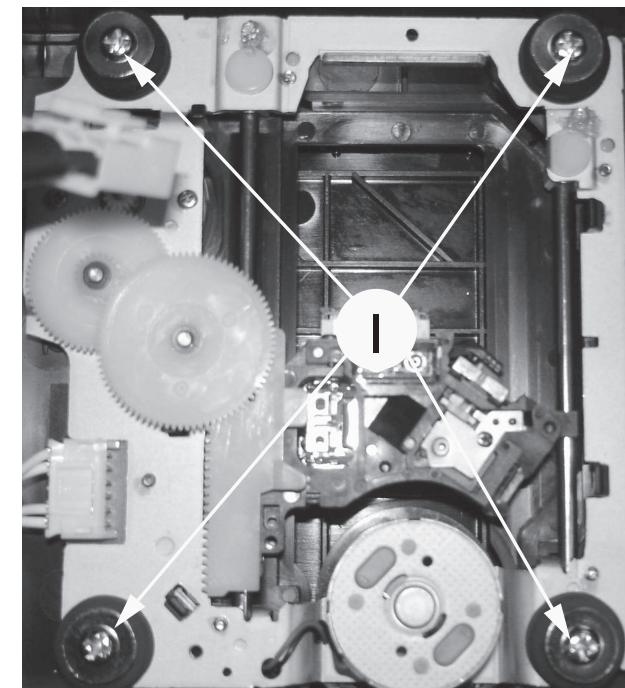

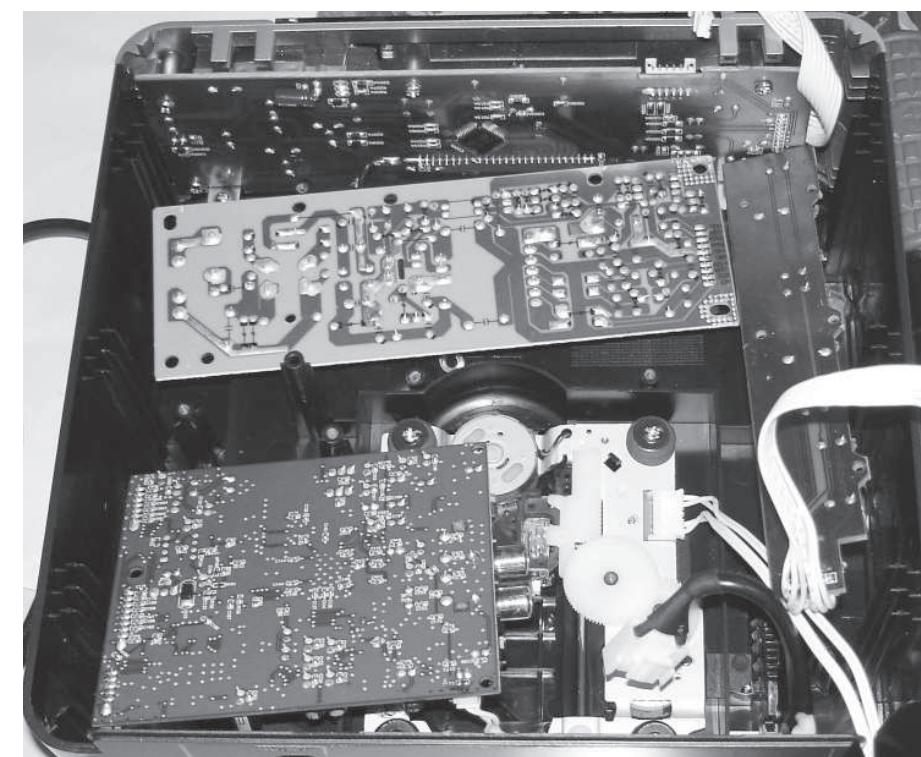

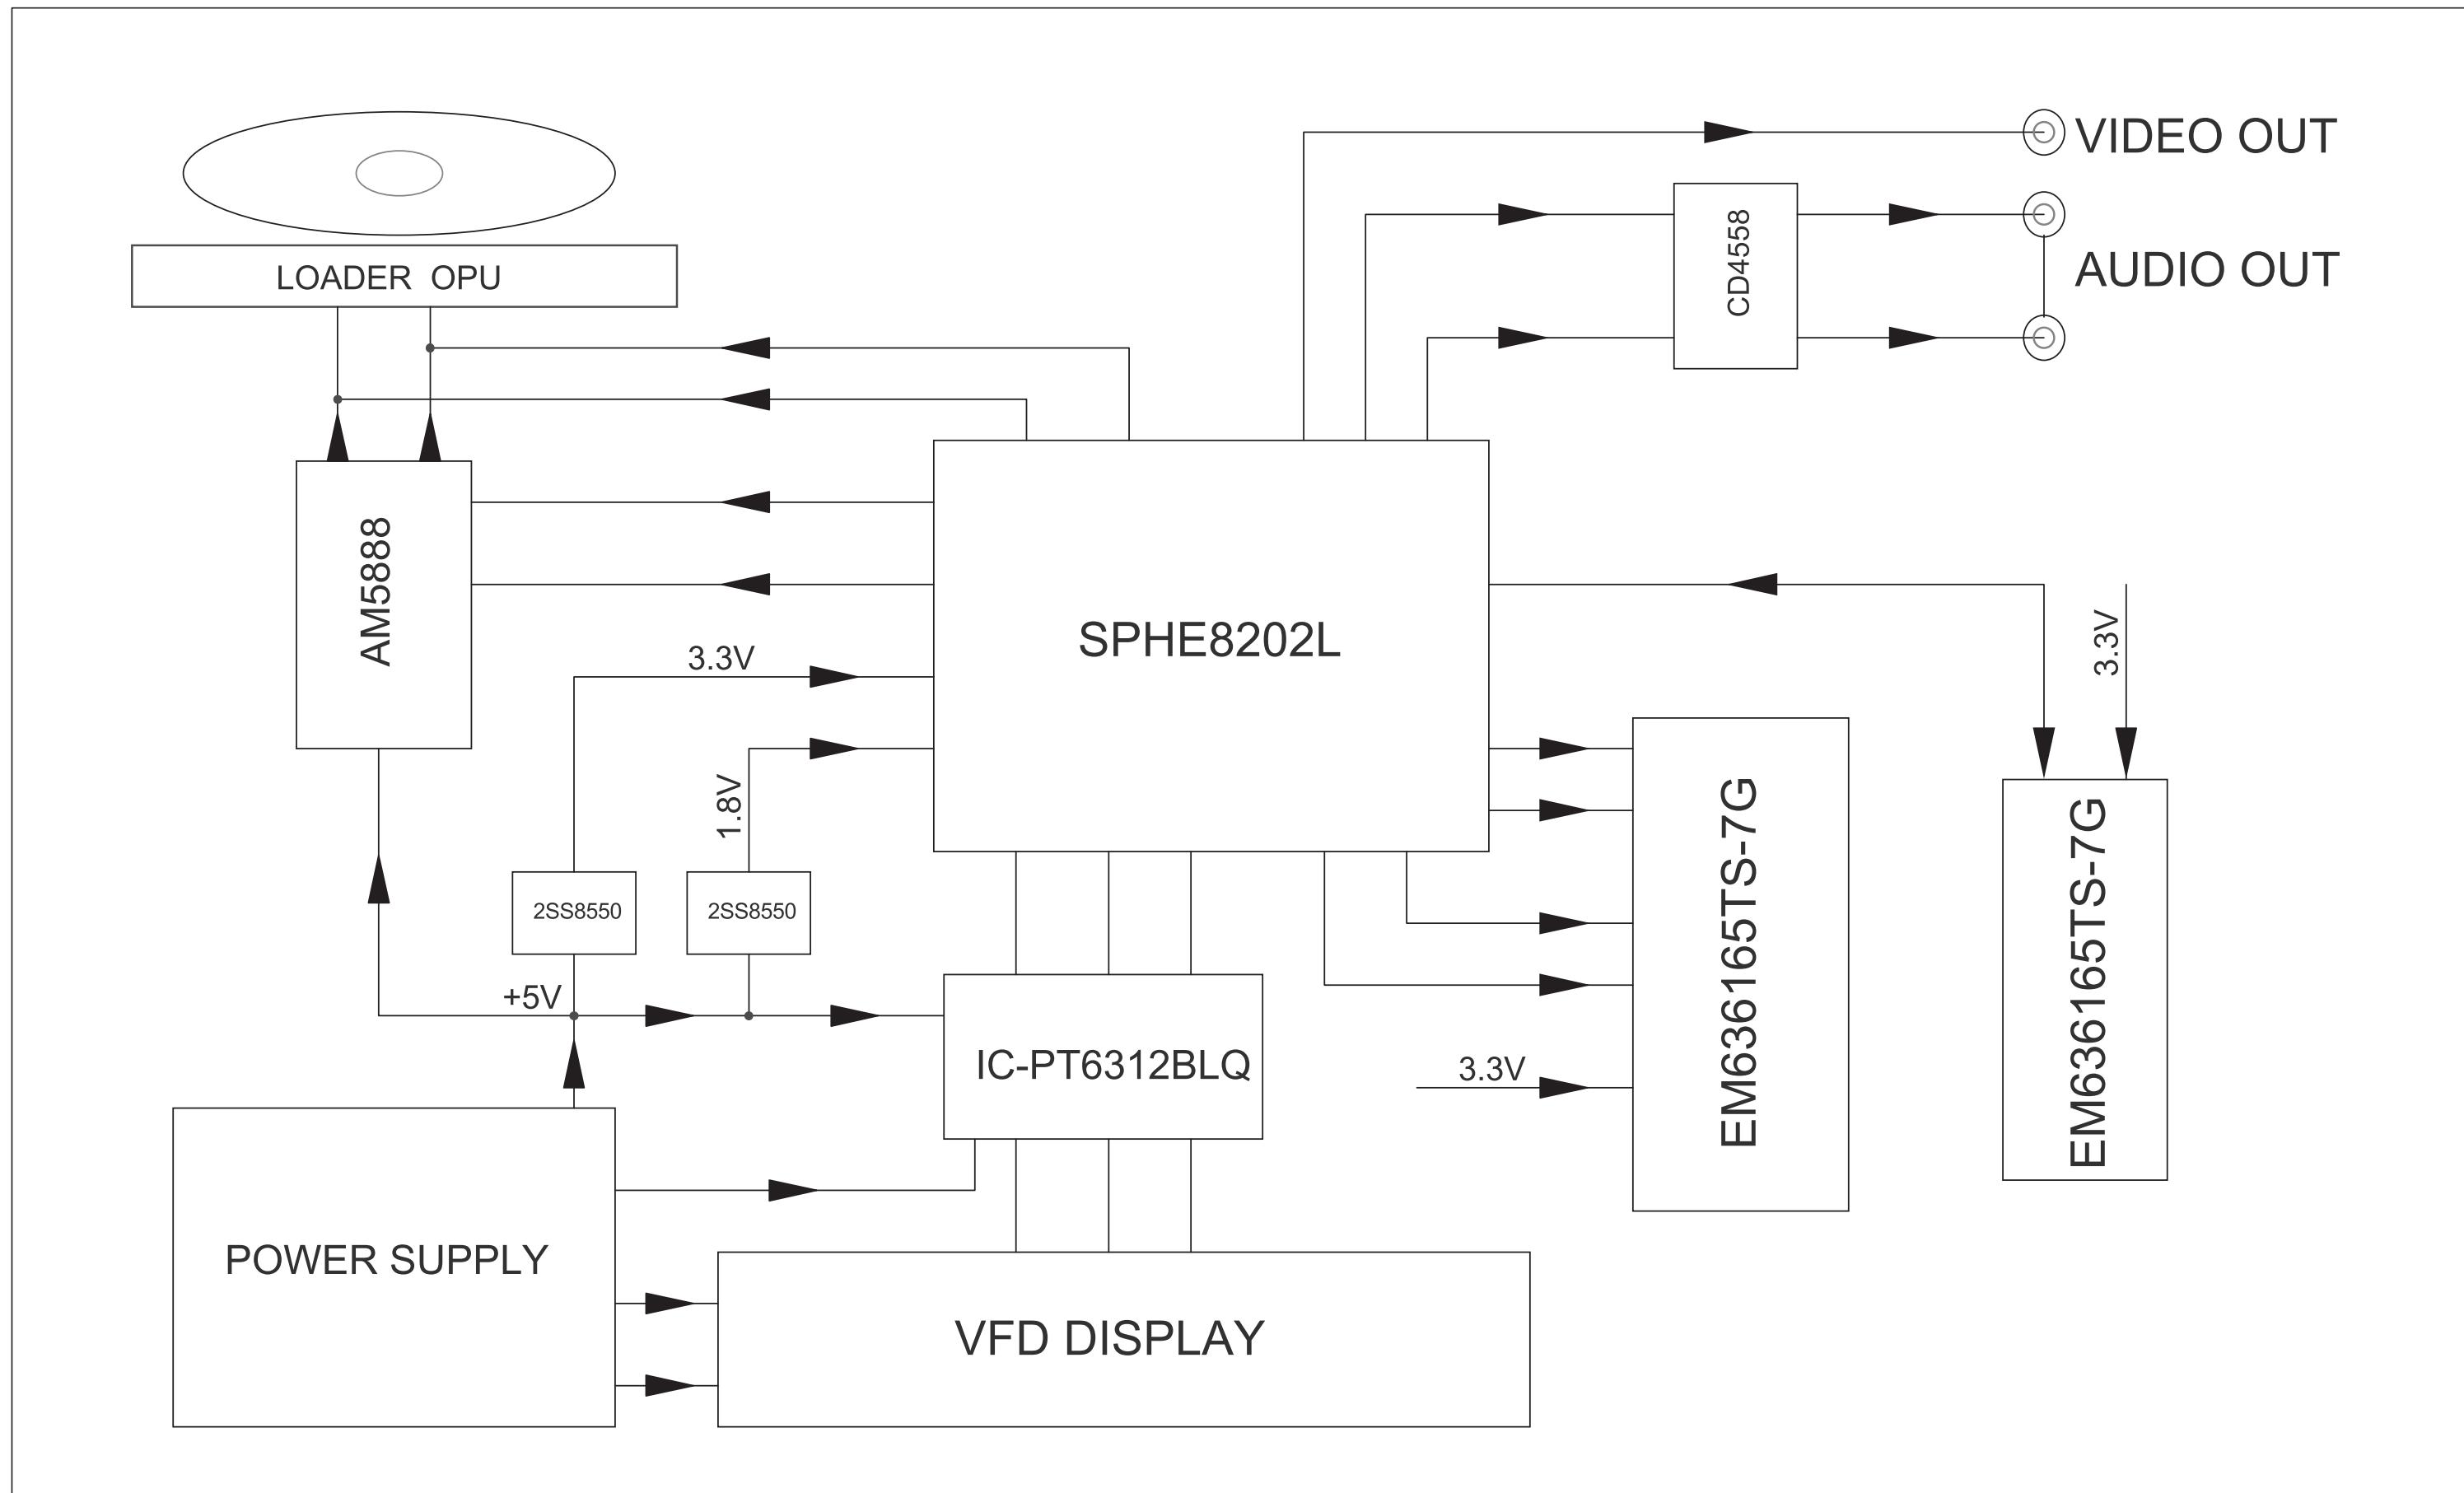

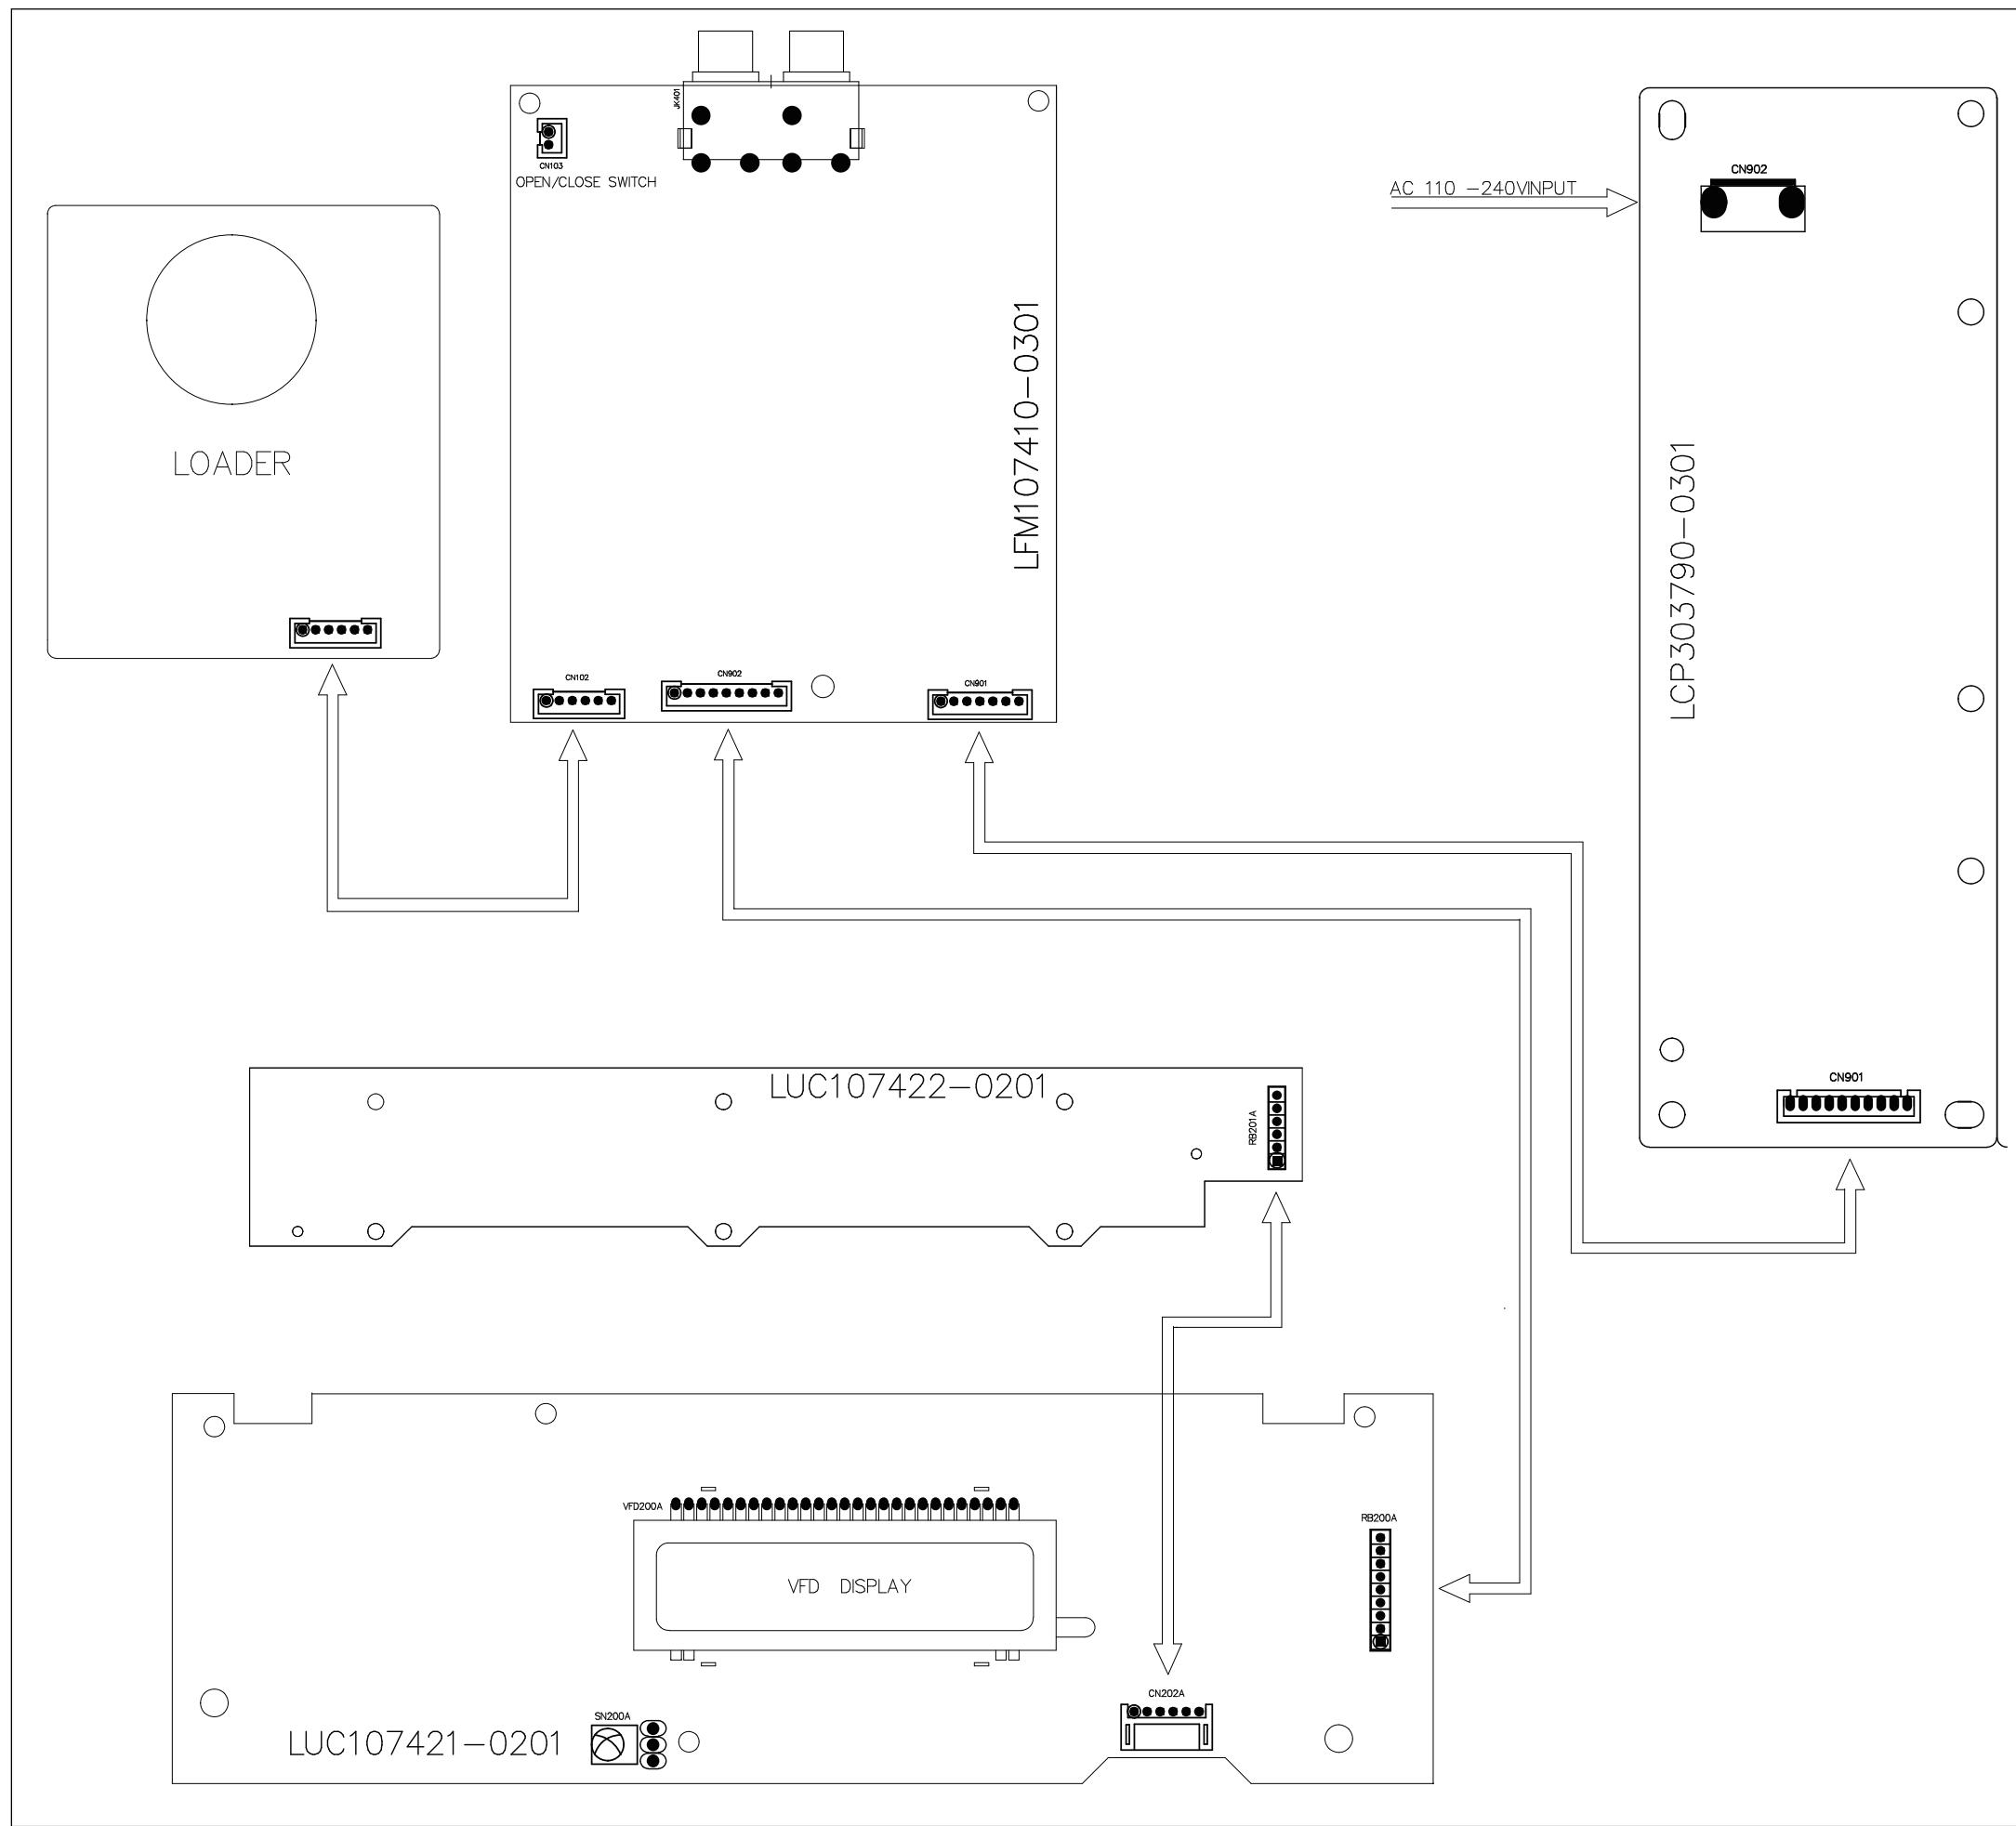

figure 9

SERVICE POSITION

service A

Note: After re-assembly ,it is very important to ensure the wires are properly inserted into their respective sockets and routed not to touch or obstruct any moving parts.
