## 2. FRONT PANEL FACILITIES

### SPEAKERS SWITCH

A combination of the power ON/OFF switch and the speaker system selector switch.

**POWER OFF:** The equipment is off.

**A:** The speaker system plugged into the A speaker sockets is in operation.

**SPKR OFF:** All speaker systems off. Useful for listening through headphones.

**B:** The speaker system plugged into the B speaker sockets is in operation.

**C:** The speaker system plugged into the C speaker sockets is in operation.

**A+B:** Both speaker systems A and B are in operation.

**A+C:** Both speaker systems A and C are in operation.

### PHONES JACKS (1, 2)

Use these to plug in stereo headphones.

A full selection of high-performance headphones is available from Pioneer.

### BASS & TREBLE CONTROL

Used for adjusting bass and treble.

Clockwise (Counterclockwise) rotation of these controls from the FLAT position will boost (diminish) tone. Also, only the left (right) channel can be adjusted by turning the front (rear) part of the knob while holding the other part in place.

Adjustment of both channels or only the left channel is made by click-stops. For normal listening, set to the FLAT position.

### FILTER SWITCHES

**LOW:** Setting this switch to ON will eliminate low noise such as record rumble, hum, etc. Leave it at OFF unless the filter is required.

**HIGH:** Setting this switch to ON will eliminate high noise such as record scratch, tape hiss, static noise from fluorescent lamps, etc. Leave it at OFF unless the filter is required.

### BALANCE CONTROL

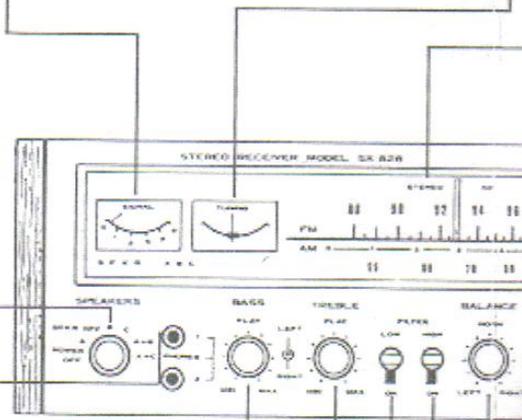

Adjust the stereo balance. When the volume of the right channel speaker is smaller, turn the knob clockwise toward RIGHT; when left channel volume is smaller, turn the knob counterclockwise toward LEFT. For normal listening, set it to the NORM position.

### VOLUME CONTROL

The volume increases when this knob is turned clockwise.

### SIGNAL METER

This meter indicates the optimum tuning point for AM and FM stations. Maximum deflection to the right indicates that the station has been properly tuned in.

### LOUDNESS SWITCH

When listening at low volume level, set this switch to ON. This emphasizes the extreme ends of the sound spectrum, giving a more natural sound contour.

### AUDIO MUTING SWITCH

In position -20dB, the volume will be attenuated by 20dB.

For restoring the volume to its former level, set the switch to the OFF position.

### FM TUNING METER

When tuning in an FM station, use this meter to make the tuning perfect. After the desired station has been properly tuned in with the SIGNAL METER, adjust the TUNING KNOB so that the needle comes to the center.

### FM STEREO INDICATOR

This lamp lights when an FM stereo broadcast is being received.

### TUNING KNOB

Used to tune in the desired station.

**NOTE:** If the setscrews holding the TUNING KNOB should ever become loose, they can be tightened with the supplied L-shaped hexagonal wrench.

### DIMMER SWITCH

The brightness of the front panel illumination is controllable by this switch. The front panel becomes dimmer when the switch is pushed in.

### FM MUTING SWITCH

This switch is used to suppress noise between FM stations when tuning. When receiving weak stations, this switch should be kept OFF because it would suppress the desired station signal at the same time. Note that this switch is OFF when it is pushed in, and ON when released.

### MIC JACKS

Connect the microphone plugs to these jacks. Only high-impedance, dynamic microphones with standard plugs (6.46) should be used. A selection of high-performance dynamic microphone is available from Pioneer.

### SELECTOR SWITCH

Choose the program source.

- AM: AM reception.
- FM MONO: FM monophonic reception only.
- FM AUTO: FM reception with automatic switching for either stereo or monophonic programs.
- PHONO 1: For playing records on a turntable plugged into the PHONO 1 jacks.
- PHONO 2: Same as above, for PHONO 2 jacks.
- MIC: Microphone sound can be reproduced.
- AUX: For playing signals fed to the AUX jacks.

### TAPE MONITOR SWITCHES (1 and 2)

These switches are set to ON for monitoring of a recording in progress or playback of recorded tapes with tape decks.

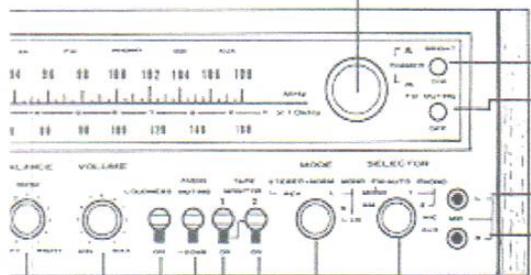

- 1: This switch is set to ON for using a tape deck plugged into the TAPE 1 MON and TAPE 1 REC jacks or the TAPE 1 REC/P.B. connector.
- 2: This switch is set to ON for using a tape deck plugged into the TAPE 2 MON and TAPE 2 REC jacks.

**NOTE:** For phonograph records or broadcasts, leave these switches in OFF position. If either of these switches is set to ON, no sound will be heard.

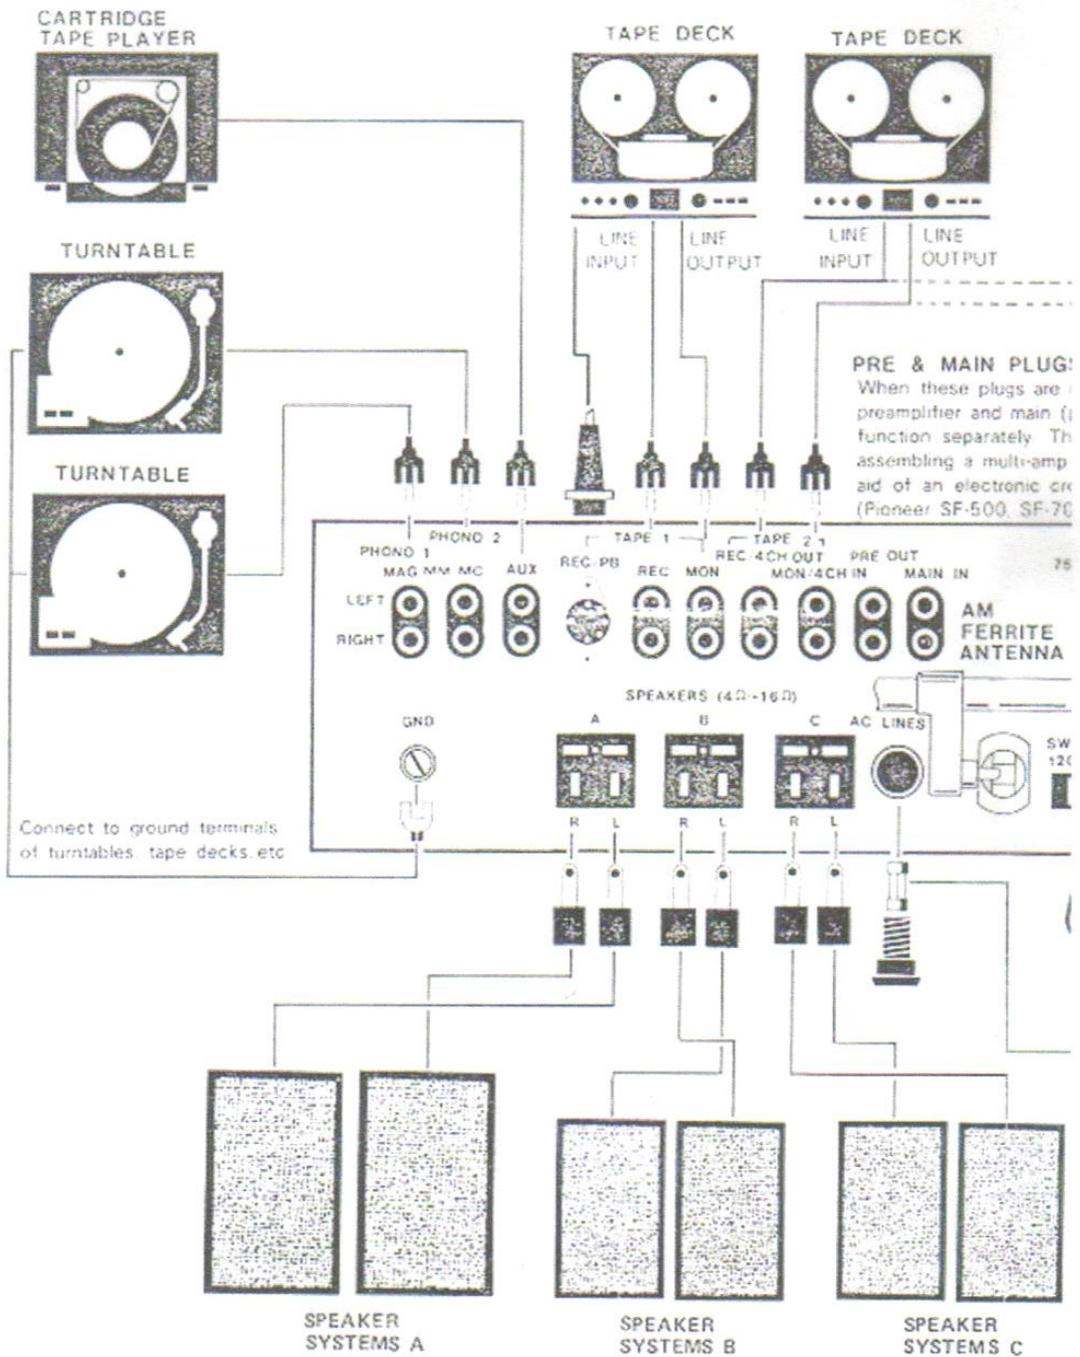

### MODE SWITCH

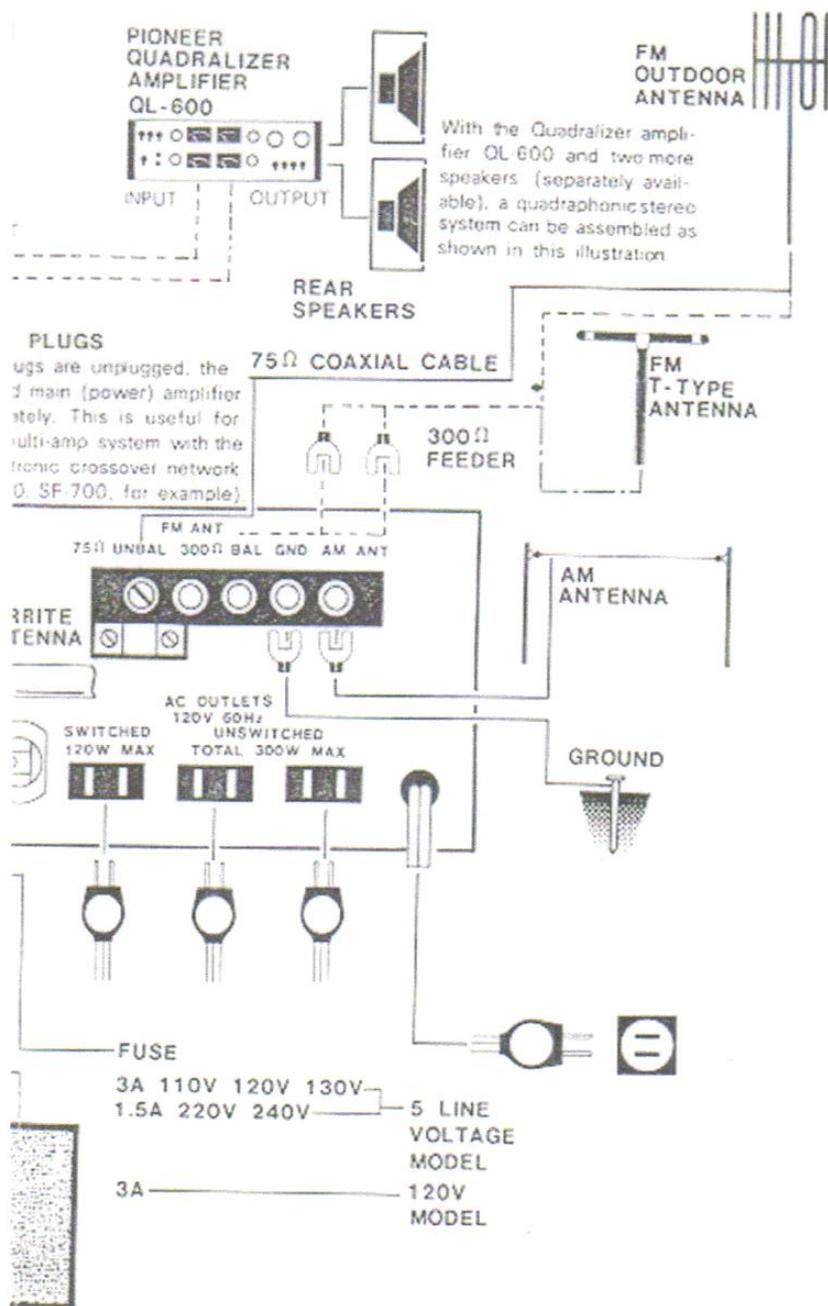

This selects the mode of reproducing sound.

- STEREO REV: Stereo, with the input signals of the left and right channels reversed.
- STEREO NORM: Normal stereo.
- MONO L: Playing the input signals of only the left channel through the left and right speakers.
- MONO R: Playing the input signals of only the right channel through the left and right speakers.
- MONO L+R: Monophonic reproduction, mixing the input signals of the left and right channels.

## 7. DIAL CORD STRINGING

1. Set the both AM and FM tuning capacitors to maximum capacitance.
2. Tie one end of the string to the spring on the AM tuning pulley.
3. Wind the string 1/4 turn around the AM tuning pulley, then wind it 2 turns around the FM tuning pulley.
4. Hook the string to the spring on the FM tuning pulley.
5. Lead the string around the small pulleys A and B.
6. Wind the string 2 turns around the tuning shaft.
7. Lead the string around the small pulleys C and D, then fasten it to the dial pointer.
