GENERAL TROUBLESHOOTING CHART

If the amplifier is otherwise operating satisfactorily the more common causes of trouble may generally be attributed to the following:

1. Incorrect connections or loose terminal contacts. Check the speakers, record player, tape deck, antenna and line cord.
2. Improper operation. Before operating any audio component, be sure to read the manufacturer's

- instructions.
3. Improper location of audio components. The proper positioning of components, such as speakers and turntable, is vital to stereo.
4. Defective audio components.

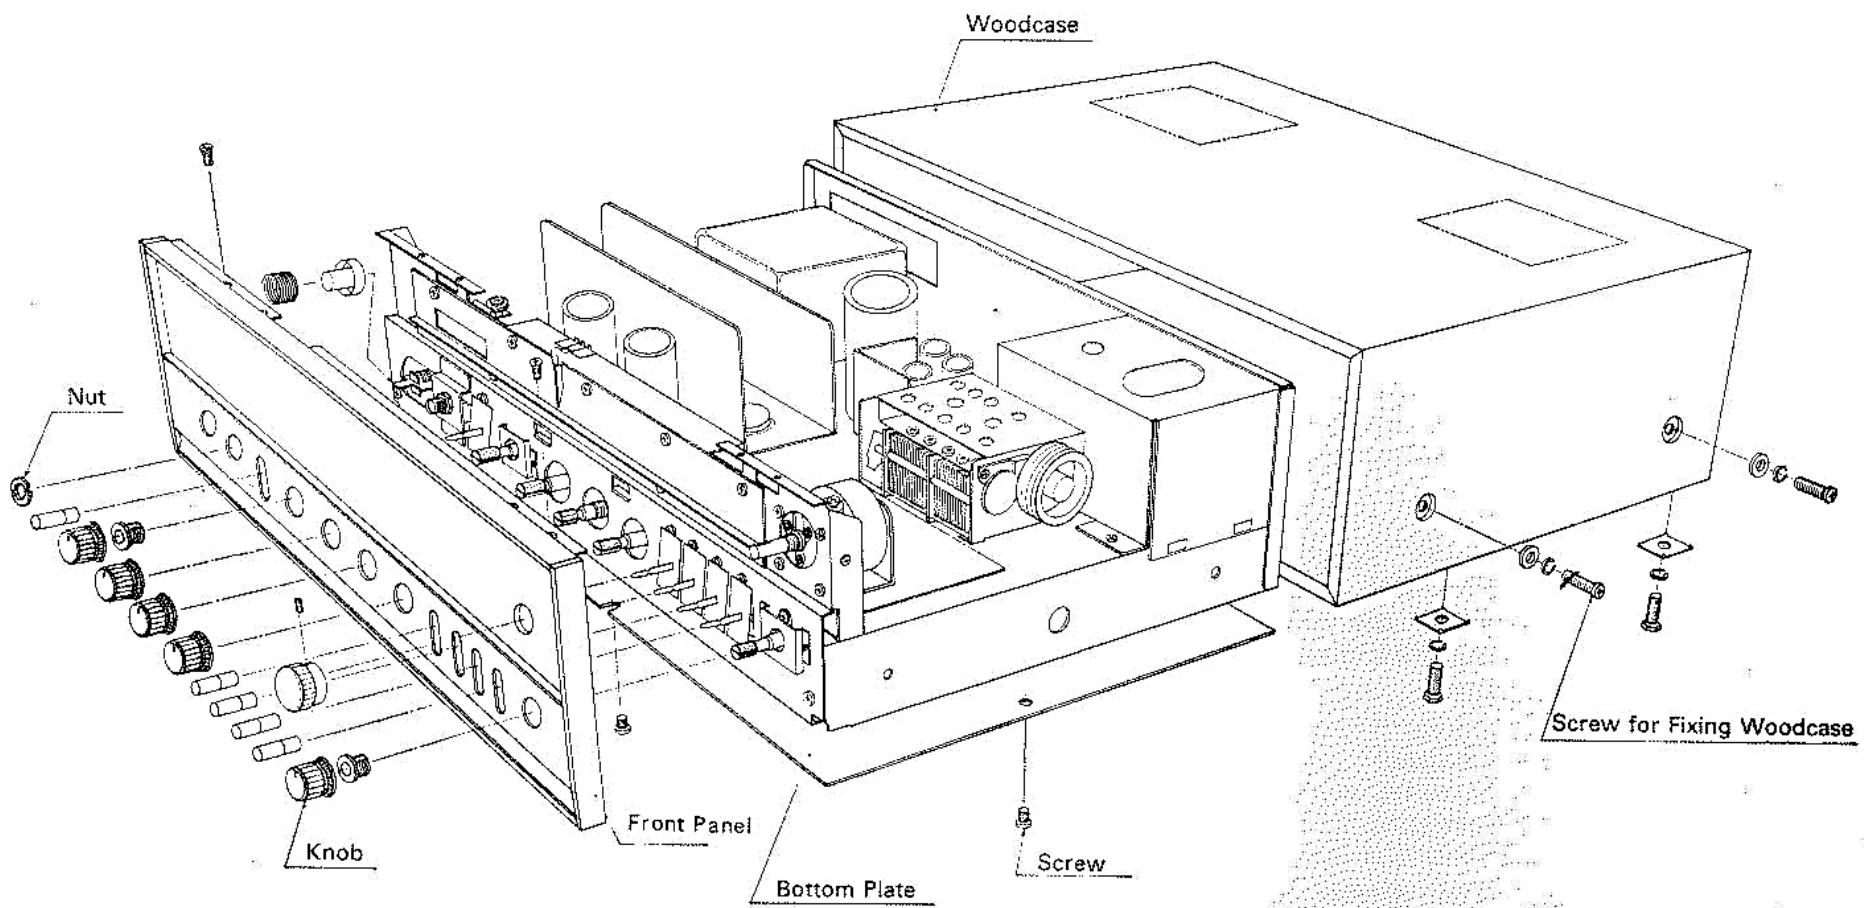

Following are some other common causes of malfunction and what to do about them.

PROGRAM	SYMPTOM	PROBABLE CAUSE	WHAT TO DO
AM, FM or MPX reception	a. Constant or intermittent noise heard at certain times or in a certain area.	* Discharge or oscillation caused by electrical appliances, such as fluorescent lamps, TV sets, D.C. motors, rectifier and oscillator * Natural phenomena, such as atmospherics, static, and thunderbolt. * Insufficient antenna input due to reinforced concrete walls or long distance from the station * Wave interference from other electrical appliances	* Attach a noise limiter to the electrical appliance that causes the noise, or attach it to the power source of the amplifier. * Install an outdoor antenna and ground the amplifier to raise the signal-to-noise ratio. * Reverse the power cord plug-receptacle connections. * If the noise occurs at a certain frequency, attach a wave trap to the ANT. input. * Place the set away from other electrical appliances.
	b. Needle of the tuning meter does not move sharply.	* Needle movement is not necessarily related to the sensitivity of the amplifier.	* Tune the set for maximum signal strength.
	c. Zero point of the meter moves greatly.	* Regional difference in field intensity.	* The unit is not at fault.
AM reception	a. Noise heard at a particular time of day, in a certain area or over part of the dial.	* Natural phenomenon.	* Install an antenna for maximum antenna efficiency. See "ANTENNA" in the Operating Instructions. * In some cases, the noise can be eliminated by grounding the amplifier or reversing the power cord plug-receptacle connections.
	b. High-frequency noise	* Adjacent-channel interference or beat interference * TV set is too close to the audio system	* Although such noise cannot be eliminated by the amplifier, it is advisable to turn the TREBLE control from midpoint to left. * Place the TV set away from the audio system.
FM reception	a. Noisy	* Poor noise limiter effect or too low SN ratio due to insufficient antenna input. NOTE: FM reception is affected considerably by the conditions of the transmitting stations: power and antenna efficiency. As a result, you may receive one station quite well while having difficulty receiving another station.	* Adjust the antenna (supplied) for maximum signal strength. * If this is not effective, use an outdoor antenna designed exclusively for FM. When you use a TV antenna for both TV and FM with a splitter make sure TV reception is not affected. * An excessively long antenna may cause noise.

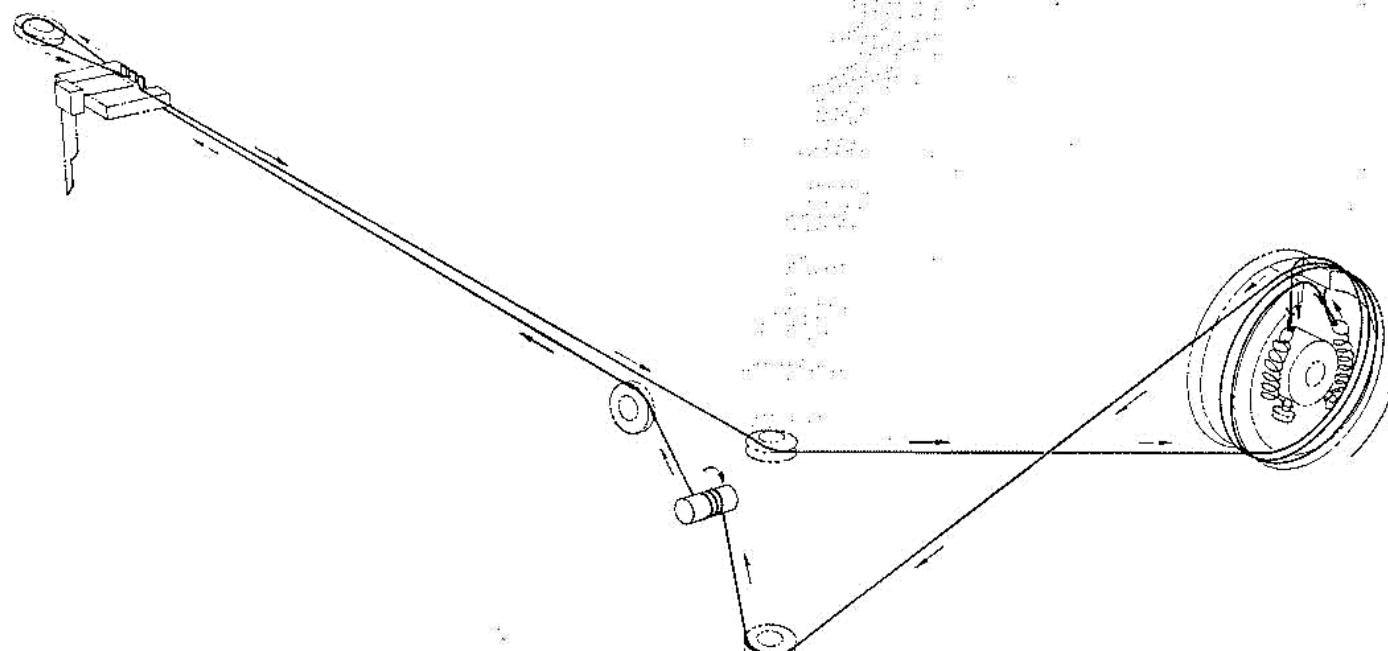

PROGRAM	SYMPTOM	PROBABLE CAUSE	WHAT TO DO
FM reception (Cont'd)	b. A series of pops is heard	* Ignition noise caused by an automobile engine.	* Increase the height of antenna or raise the antenna input as previously described.
	c. Distortion or no sound	* Out of tune due to frequency swing	* Retune the signal.
	d. Tuning noise between stations	* This noise results from the nature of FM reception. As the station signal becomes weak, the noise limiter effect is decreased. The amplification of the limiter, in turn, is enlarged and a noise is generated.	* Tune the signal at reduced volume.
FM-MPX reception	a. Noise heard during FM-MPX reception while not heard during FM mono reception	* The service area of the FM-MPX broadcast is only half that of the FM mono broadcast.	* Install the antenna for maximum antenna input. * Turn the TREBLE control from midpoint to left.
	b. Channel separation becomes worse during reception.	* Excess heat	* Make sure that air can flow underneath the amplifier.
	c. The stereo indicator comes on and off.	* Interference * Station signal is weak	* The indicator is not at fault. * Adjust VR ₄₀₁
	d. The stereo indicator comes on and off even though a stereo station is not received.	* Interference	* The indicator is not at fault. * Adjust VR ₄₀₁
Record playing or tape playback	a. Hum or howling	* Record player placed directly on the speaker box. * Use of unshielded wire. * Loose terminal contact. * Shielded wire too close to line cord, fluorescent lamp or other electrical appliances. * Nearby amateur radio station or TV transmission antenna.	* Put a cushion between the player and the speaker box or separate them. * The connecting shield wire should be as short as possible. * Turn the BASS control from midpoint to left. * Consult the nearest Radio Regulatory Bureau.
	b. Surface noise	* Worn or old record * Dusty record * Worn pick-up needle * Dusty needle * Improper needle pressure	* Remove dust from record and/or needle. * Replace needle. * Correct needle pressure. * Turn the TREBLE control properly from midpoint to left.
Overall stereo program	The BALANCE control is not at midpoint when equal sound comes from left and right channels	* It is important to adjust the control for equal sound from both channels. It should not always be set to midpoint.	* Set the MODE switch to the MONO position and then set the BALANCE control to the position where equal sound comes from both channels.

DISASSEMBLY PROCEDURE

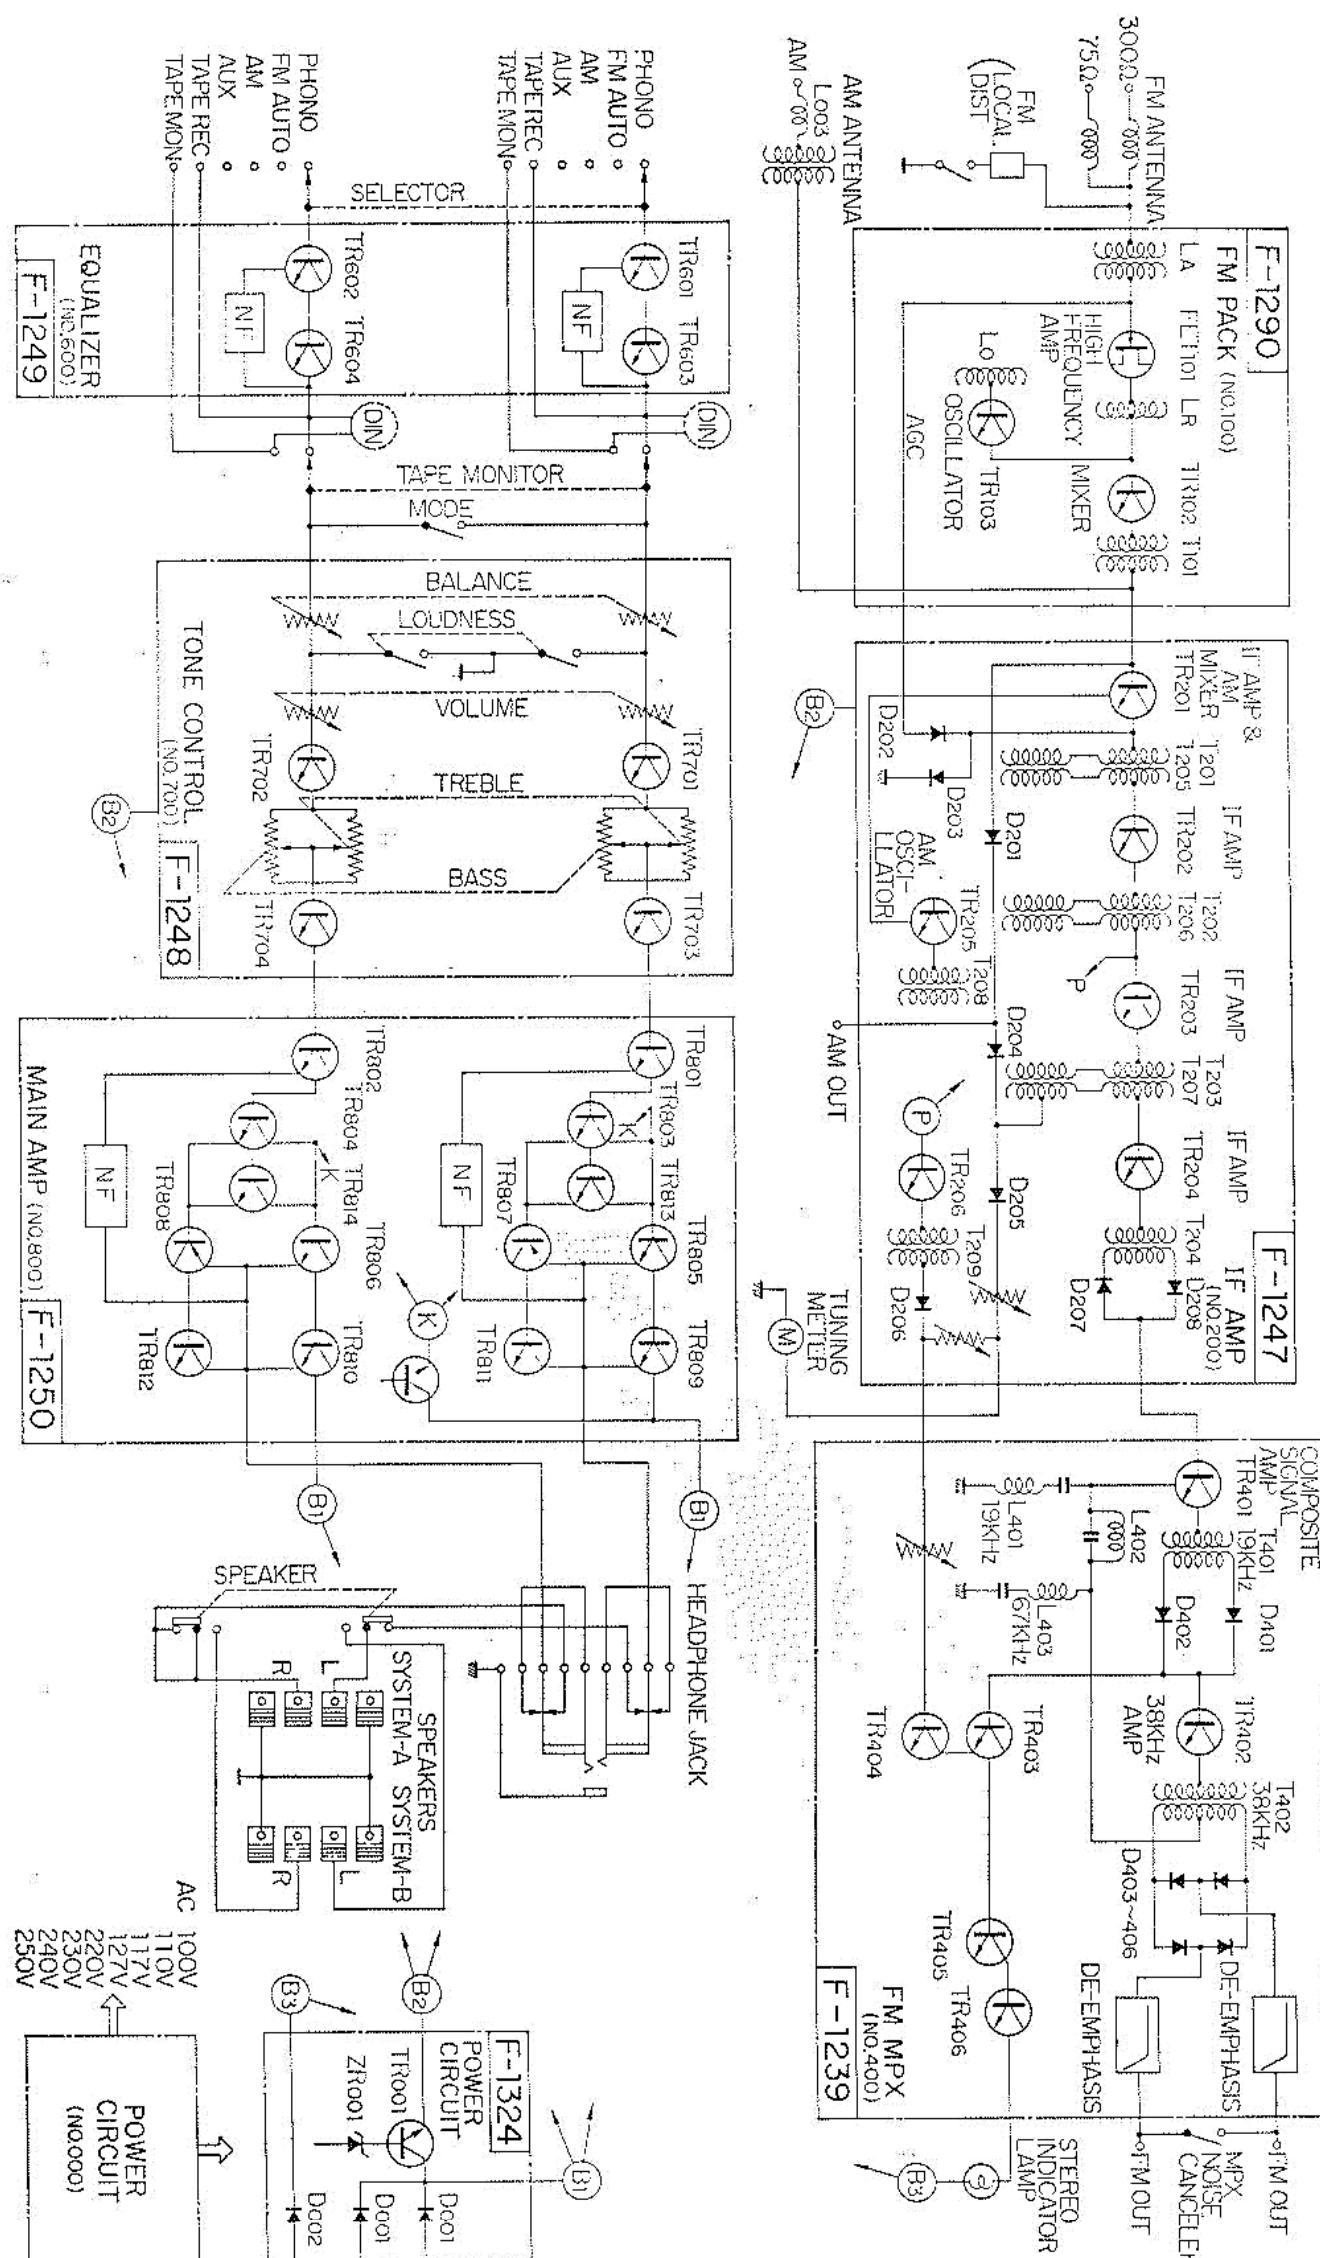

REMOVING THE FRONT PANEL, WOOD CASE AND BOTTOM PLATE

BLOCK DIAGRAM

ALIGNMENT

TEST POINTS

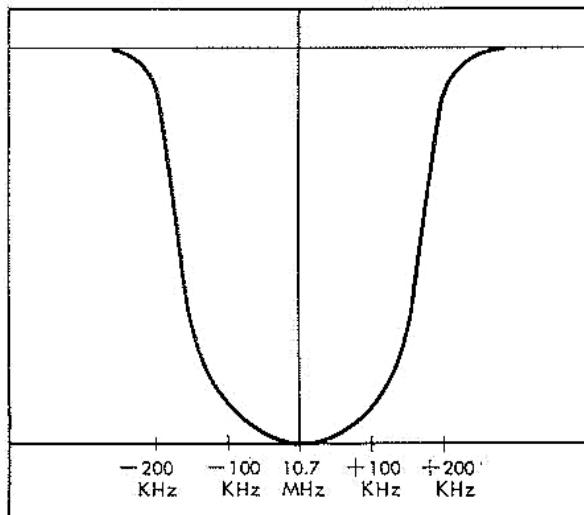

FM ALIGNMENT PROCEDURE

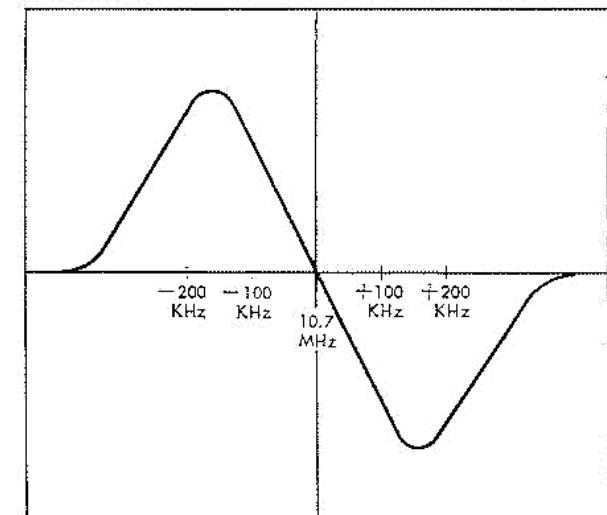

NOTE: To align, set the FM signal generator level to minimum, turn tuning gang fully, center carrier wave, and set pointer to reference mark.

STEP	ALIGN	GENERATOR	FEED SIGNAL	OUTPUT INDICATOR	DIAL SETTING	ADJUST	ADJUST FOR
1.	IF Transformer	10.7 MHz ±200 kHz	Sweep signal is sent to TP_{101} via the 10pF ceramic capacitor	Oscilloscope is connected to TP_{201} , TP_{202} and TP_{203} via the 0.02 μ F ceramic capacitor		Primary and secondary sides of T_{201} , T_{202} , and T_{203}	Best I.F. wave form
2.	Discriminator	10.7 MHz ±200 kHz	Sweep signal is sent to 2A via the 0.02 μ F ceramic capacitor	Oscilloscope is connected to 2K via the 0.05 μ F ceramic capacitor		FM Discriminator T_{204} primary and secondary	S curve
3.	O.S.C	88 MHz 400 Hz 100% Modulation	To antenna terminals	Oscilloscope and V.T.V.M. at output load	88 MHz	O.S.C. coil L_0	Maximum
4.	O.S.C	108 MHz 400 Hz 100% Modulation	To antenna terminals	Oscilloscope and V.T.V.M. at output load	108 MHz	O.S.C. trimmer TC_{103}	Maximum
5.	Repeat 3&4						
6.	RF Amp. Circuit	90 MHz 400 Hz 100% Modulation	To antenna terminals	Oscilloscope and V.T.V.M. at output load	90 MHz	Antenna Coil L_A and L_R	Maximum
7.	RF Amp. Circuit	106 MHz 400 Hz 100% Modulation	To antenna terminals	Oscilloscope and V.T.V.M. at output load	106 MHz	Trimmer TC_{101} and TC_{102}	Maximum
8.	Repeat 6&7						

FM IF CHARACTERISTIC

FM DISCRIMINATOR CHARACTERISTIC

ALIGNMENT

FM MULTIPLEX ALIGNMENT PROCEDURE

1. Do not attempt to align the Multiplex Circuit unless the following equipment is available:

- a. Multiplex Stereo Generator b. Oscilloscope c. AC. V.T.V.M. d. Audio Oscillator e. FM Signal Generator

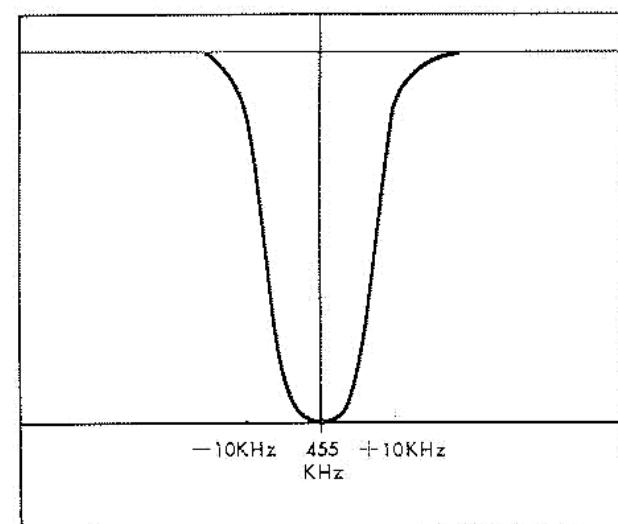

STEP	ALIGN	GENERATOR	FEED SIGNAL	OUTPUT INDICATOR	ADJUST	ADJUST FOR
1.	19 kHz Trap	19 kHz Audio Signal	Connect to 4A	V.T.V.M. at 4G	L ₄₀₁	Minimum
2.	67 kHz Trap	67 kHz Audio Signal	Connect to 4A	V.T.V.M. at 4G	L ₄₀₃	Minimum
3.	19 kHz Transformer	FM Signal Gen. Modulated 30% by STEREO Gen. sub-channel	Antenna terminals Tune to signal	V.T.V.M. and Oscilloscope at 4H	T ₄₀₁	Maximum
4.	38 kHz Transformer	FM Signal Gen. Modulated 30% by STEREO Gen.	Antenna terminals Tune to signal	V.T.V.M. and Oscilloscope at 4H	T ₄₀₂	Maximum
5.	38 kHz Transformer and Separation VR	FM Signal Gen. Modulated 30% by STEREO Signal Gen. channel-L	Antenna terminals Tune to signal	V.T.V.M. and Oscilloscope at output load channel-R	T ₄₀₂ within $\frac{1}{4}$ turn and Separation VR (VR ₆₀₁)	Channel-R Minimum

AM ALIGNMENT PROCEDURE

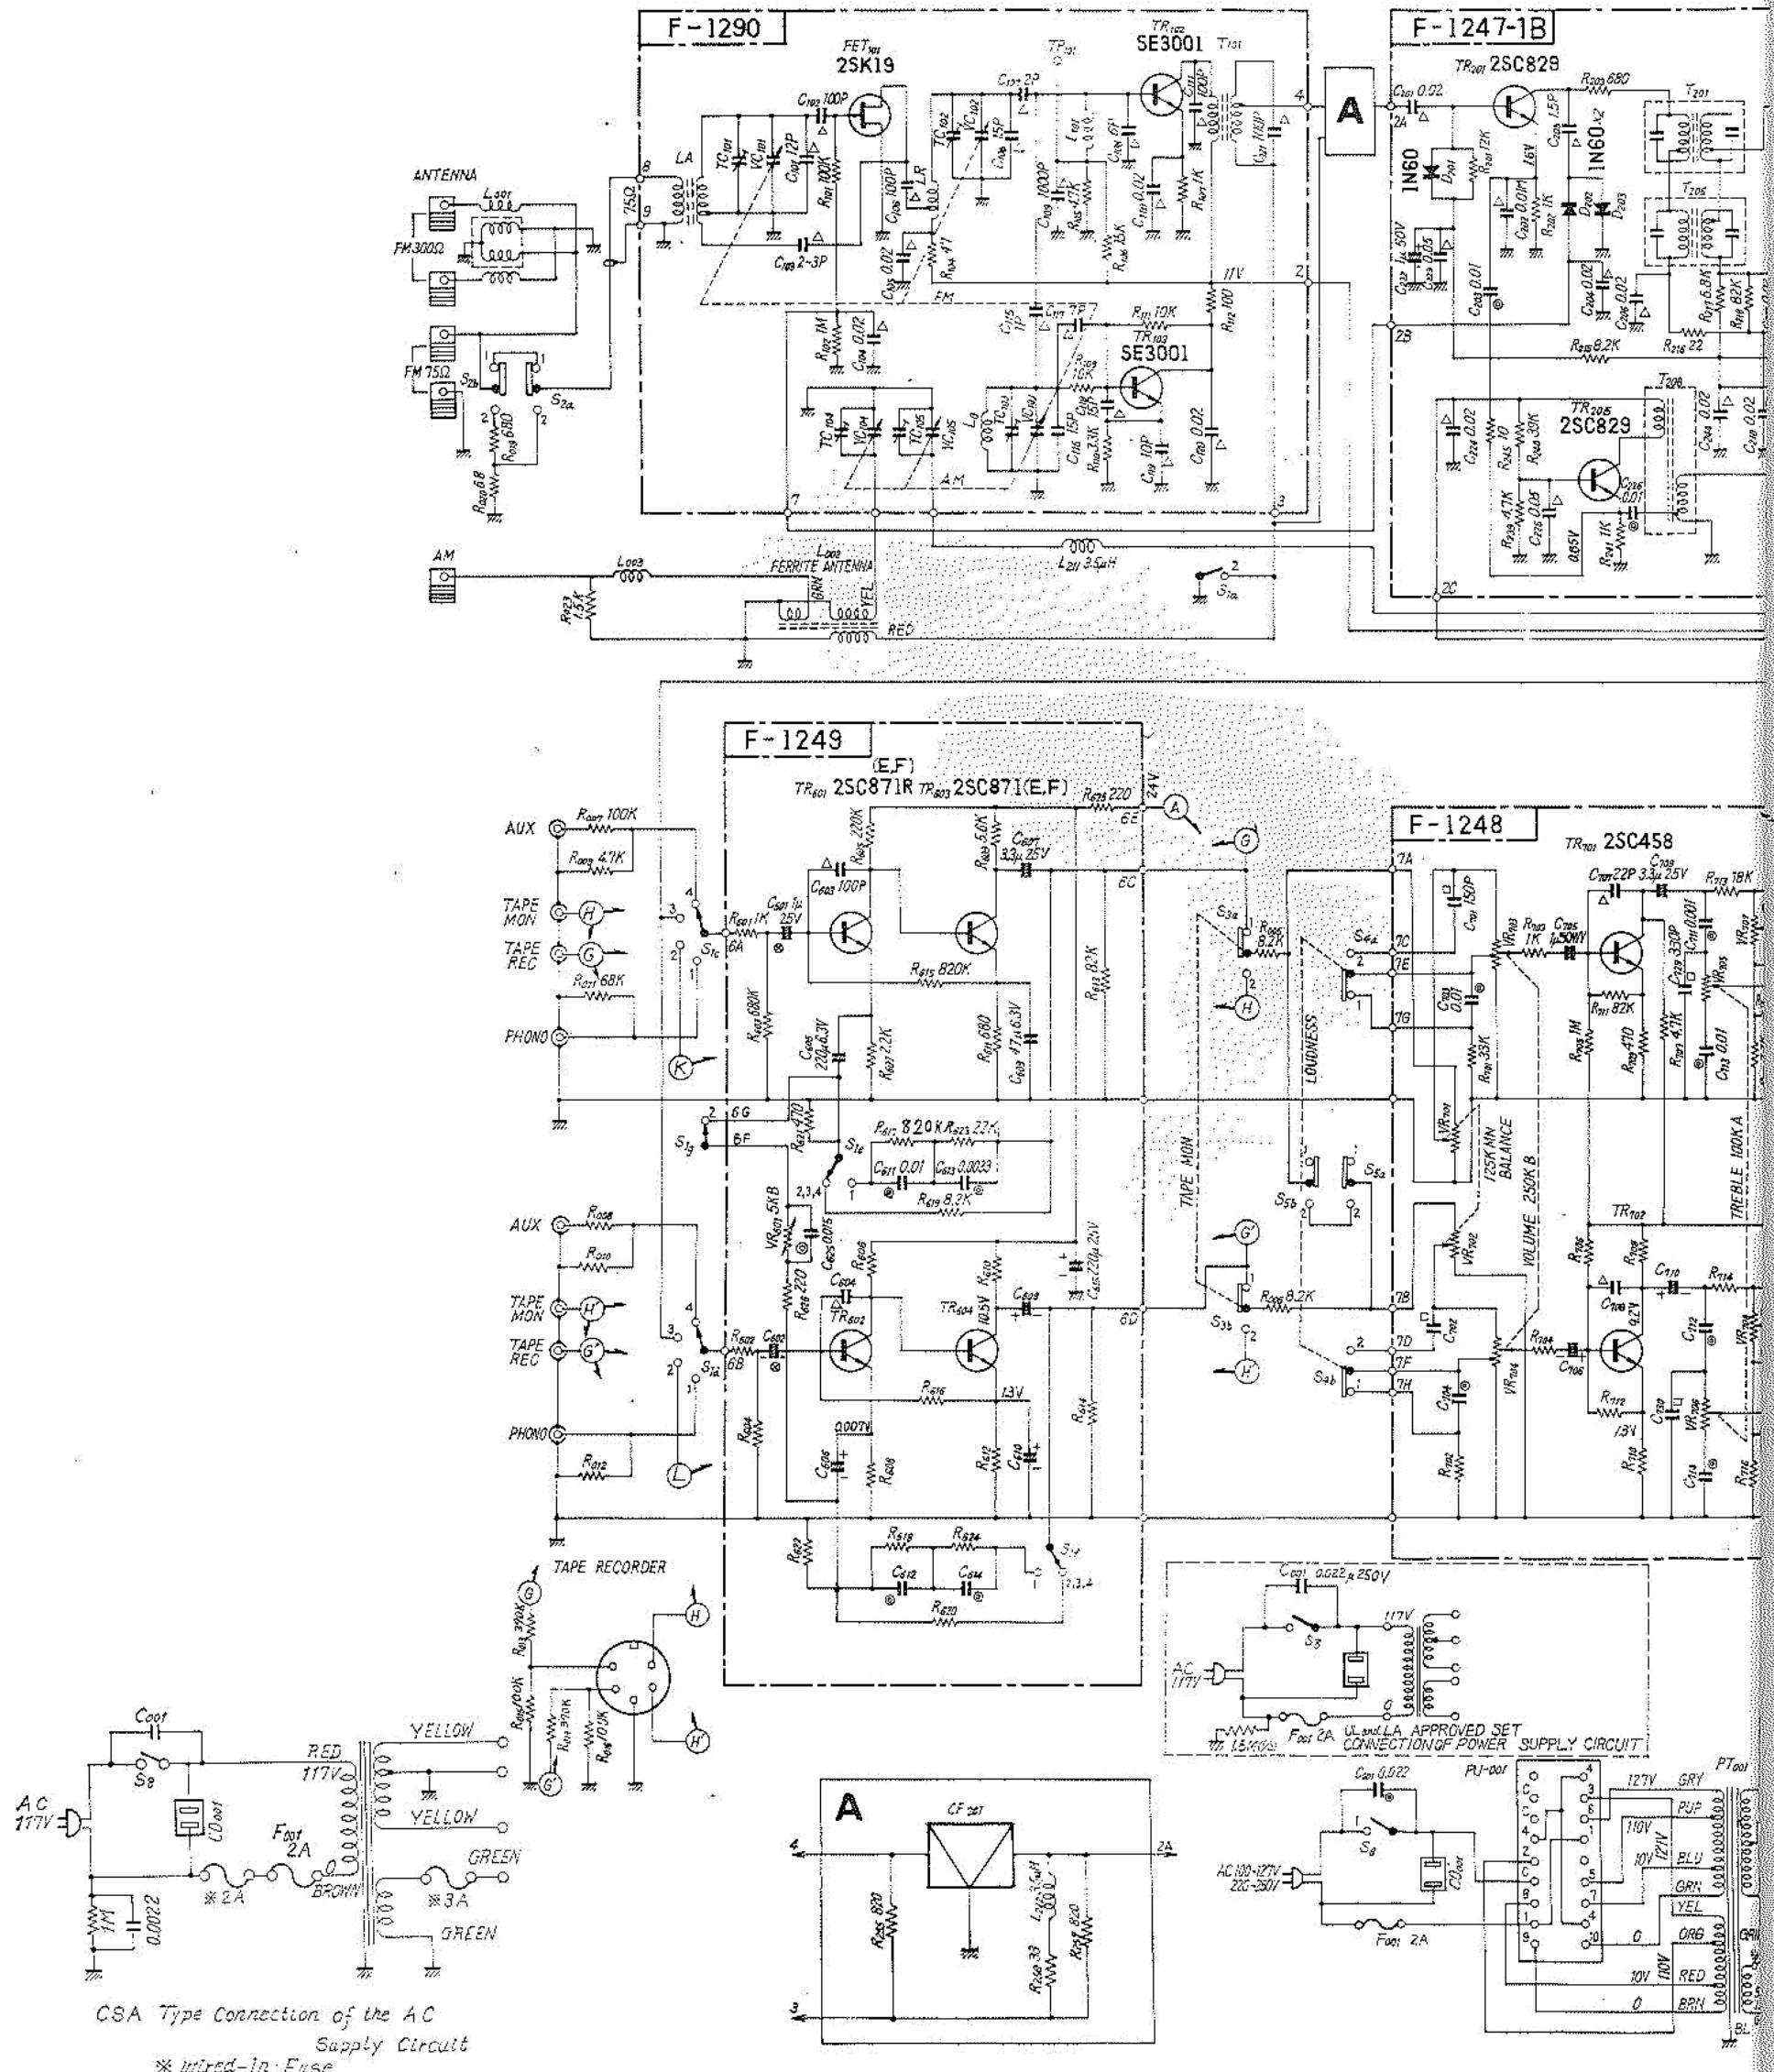

NOTE: To align, set AM signal Generator level to minimum.

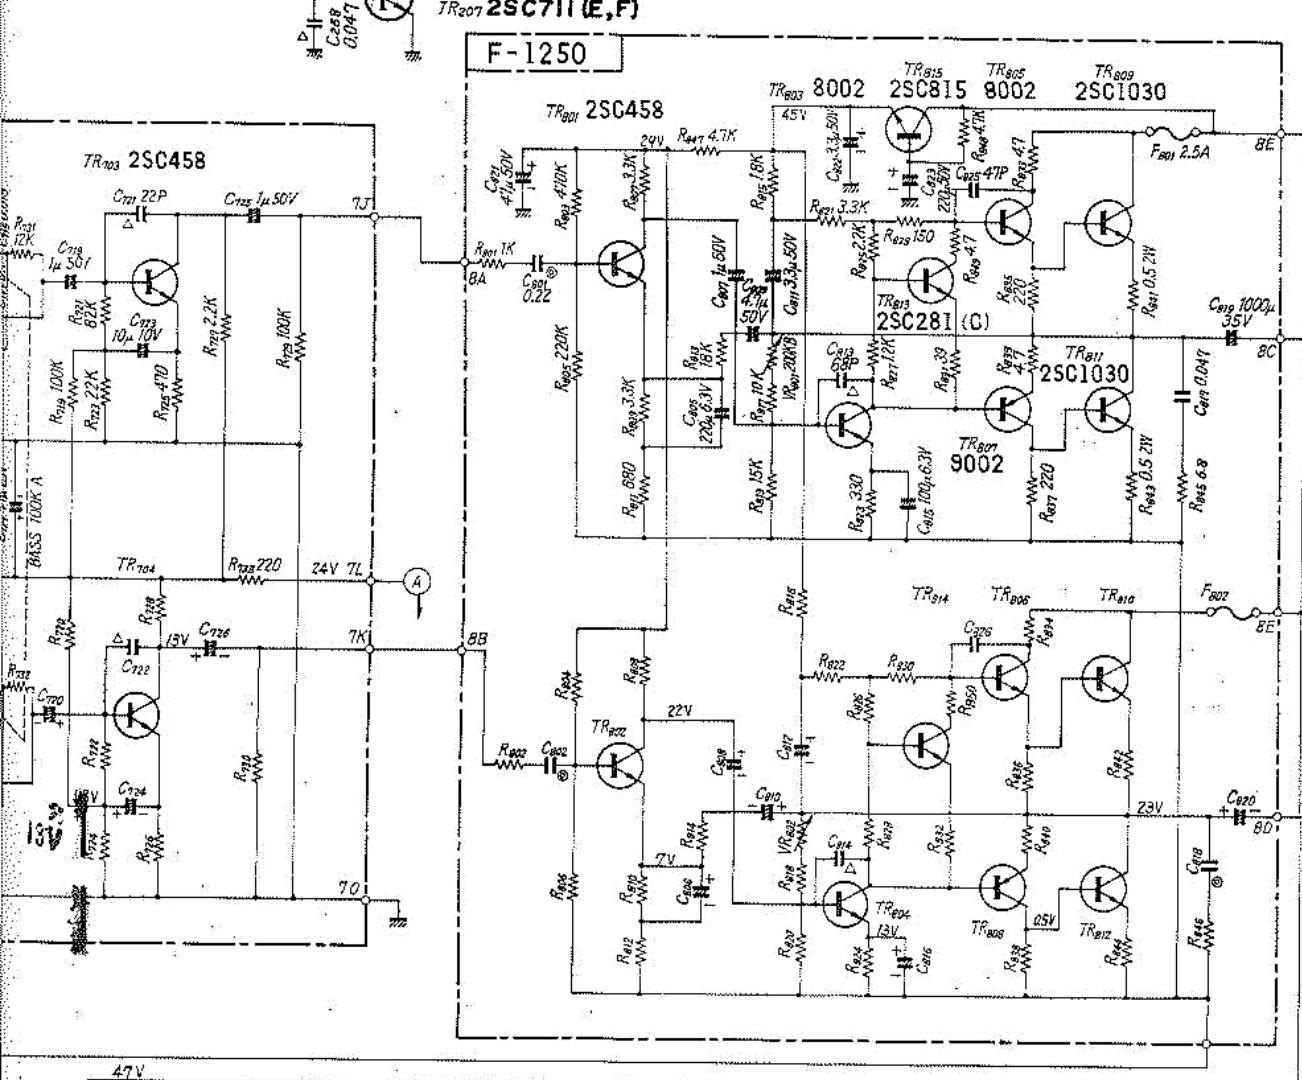

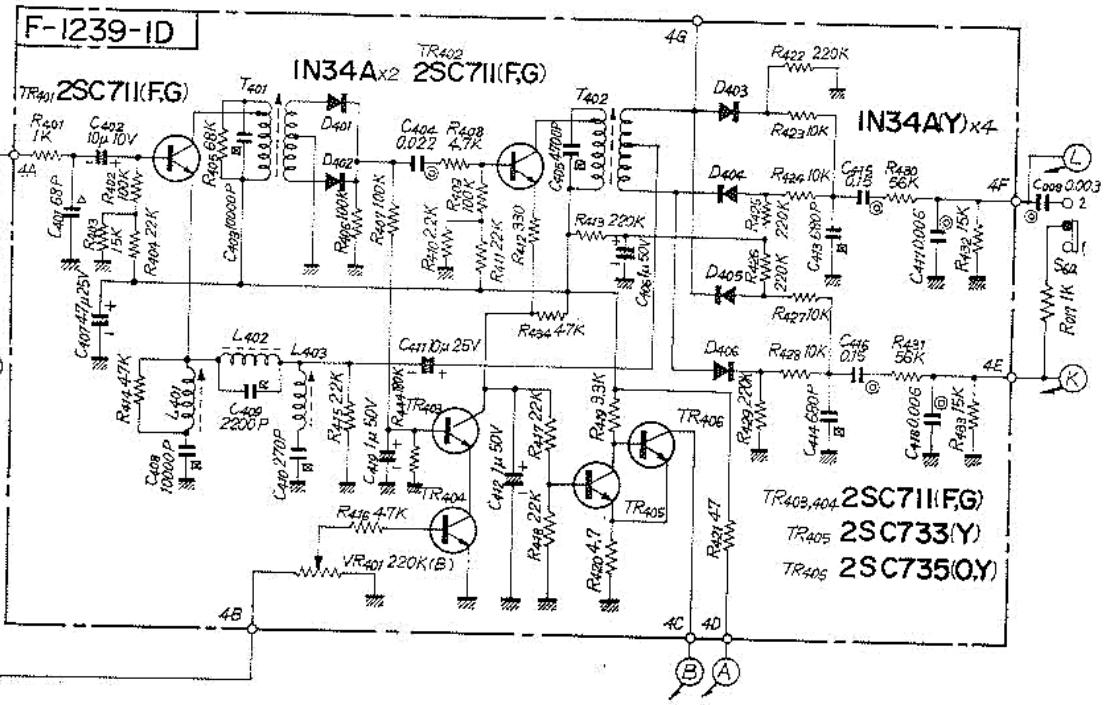

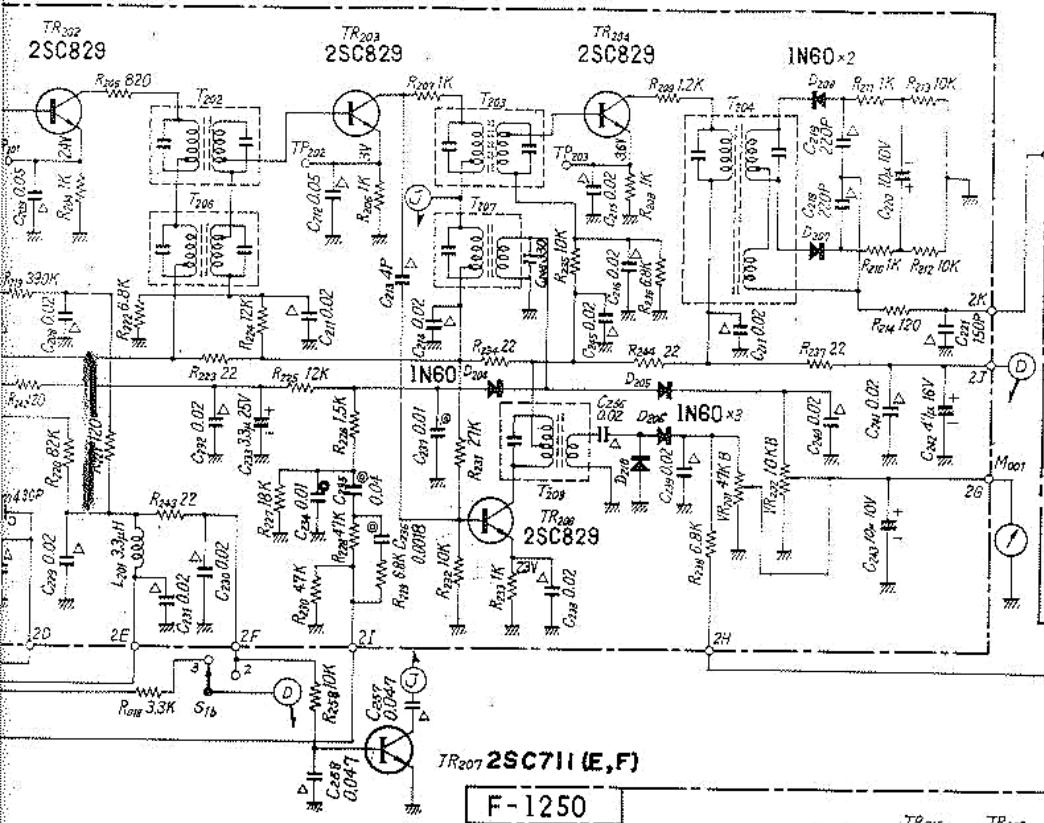

STEP	ALIGN	GENERATOR	FEED SIGNAL	OUTPUT INDICATOR	DIAL SETTING	ADJUST	ADJUST FOR
1.	I.F. Transformer	455 kHz ±30 kHz Sweep-generator	2A	Oscilloscope and V.T.V.M. is connected to TP ₂₀₄		Primary and secondary sides from the 1st I.F.T. (T ₂₀₅ ~T ₂₀₇)	Best I.F. wave form
2.	O.S.C.	AM-generator 600 kHz 400 Hz 30% Modulation	Antenna terminals	Oscilloscope and V.T.V.M. at output load	600 kHz	O.S.C. Coil T ₂₀₈	Maximum
3.	O.S.C.	AM-generator 1400 kHz 400 Hz 30% Modulation	Antenna terminals	Oscilloscope and V.T.V.M. at output load	1400 kHz	O.S.C. Trimmer cap. TC ₁₀₅	Maximum
4.	Repeat 2 and 3						
5.	Antenna circuit	AM-generator 600 kHz 400 Hz 30% Modulation	Antenna terminals	Oscilloscope and V.T.V.M. at output load	600 kHz	Ferrite bar Antenna coil L ₀₀₂	Maximum
6.	Antenna circuit	AM-generator 1400 kHz 400 Hz 30% Modulation	Antenna terminals	Oscilloscope and V.T.V.M. at output load	1400 kHz	Antenna circuit Trimmer TC ₁₀₄	Maximum
7.	Repeat 5 and 6
