**HOW TO USE THIS SERVICE MANUAL**

1. Look up the type of trouble you are confronted with in either the General Troubleshooting charts provided in this manual from pp 2-11.
  2. By referring to the charts, isolate the trouble to a particular unit or part. (See the column titled "What To Do" in the General Chart and "Check Point" in the Troubleshooting Chart)
  3. Locate the section of the chassis (Parts Layout P. 13), in which the part is located by using the co-ordinates (Column D) in the Parts List pp. 25-29.
  4. Using the co-ordinates given in the Parts List (Column C), pinpoint the position of the part in the Schematic Diagram of Circuits, pp. 15-16.
- NOTE: Much of the information contained in this manual has been prepared for use by qualified service repairmen. Please read your Warranty thoroughly before attempting any internal adjustments on your own.

## GENERAL CHART

If the amplifier is otherwise operating satisfactorily, the more common causes of trouble may generally be attributed to the following:

1. Incorrect connections or loose terminal contacts.  
Check the speakers, record player, tape recorder, antenna and line cord.
2. Improper operation.

Before operating any audio component, be sure to the

manufacturer's instructions.

3. Improper location of audio components. The proper positioning of components, such as speakers and turntable, is vital to stereo.
  4. Defective audio components.
- The following are some other common causes of malfunction and what to do about them.

PROGRAM	SYMPTOM	PROBABLE CAUSE	WHAT TO DO
AM, FM or FM-MPX reception	A. Constant or intermittent noise heard at certain times or in a certain area	<ul style="list-style-type: none"> <li>* Discharge or oscillation caused by electrical appliances, such as fluorescent lamp, TV set, A.C. motor, rectifier and oscillator</li> <li>* Natural phenomena, such as atmospheric conditions, statics and thunderbolts</li> <li>* Insufficient antenna input due to reinforced concrete walls of or long distance from the broadcasting station</li> <li>* Wave interference from other electrical appliances</li> </ul>	<ul style="list-style-type: none"> <li>* Attach a noise limiter to the electrical appliance that causes the noise, or attach it to the power source of the amplifier</li> <li>* Install an outdoor antenna and ground the amplifier to raise the signal-to-noise ratio</li> <li>* Reverse the power cord plug-receptacle connections</li> <li>* If the noise occurs at a certain frequency, attach a wave trap to the ANT. input</li> <li>* Keep the set at a proper distance from other electrical appliances</li> </ul>
	B. The needle of the tuning indicator does not move well.	See Operating Instructions Manual, "Tuning Indicator" for explanation	Tune the set for maximum signal strength
AM reception	A. Noise heard at a particular time of a day, in a certain area or over part of the dial	Natural phenomenon of AM reception	<ul style="list-style-type: none"> <li>* Install an antenna for maximum antenna efficiency. See "ANTENNA" in the Operating Instructions manual</li> <li>* In some cases, the noise can be eliminated by grounding the amplifier or reversing the power cord plug-receptacle connections</li> </ul>
	B. High-frequency noise	<ul style="list-style-type: none"> <li>1. Adjacent-channel interference or beat interference</li> <li>2. TV set too close to the audio system</li> </ul>	<ul style="list-style-type: none"> <li>* Although such noise cannot be eliminated by the amplifier, it is advisable to turn the TREBLE control properly from midpoint to left and switch on the NOISE FILTER</li> <li>* Keep the TV set at a proper distance from the audio system</li> </ul>
FM reception	A. Noisy	<p>Poor noise limiter effect or too low S/N ratio due to insufficient antenna input</p> <p>Note: FM reception is affected considerably by the broadcasting station's power and antenna efficiency. As a result, you may receive one station quite well while having difficulty in receiving another station.</p>	<ul style="list-style-type: none"> <li>* Install an antenna (provided) for maximum signal strength</li> <li>* If this is not effective, use an outdoor antenna designed exclusively for FM. When you use a TV antenna for both TV and FM with the help of a divider, make sure the TV reception is not affected</li> <li>* An excessively long antenna may cause noise</li> </ul>

## GENERAL CHART

PROGRAM	SYMPTOM	PROBABLE CAUSE	WHAT TO DO
FM reception (continued)	B. Emission of a scratching sound	* Ignition noise caused by the starting of an automobile engine	* Install the antenna and its lead-in wire at a proper distance from the road or raise the antenna input as previously described.
	C. Distortion or no sound during the reception	* Tuning drift results from the nature of FM	The built-in automatic frequency control prevents distortion during FM reception. If the FM program should be out of tune due to mechanical vibration or other factors, retune it.
	D. Tuning noise between stations	* This noise results from the nature of FM reception. As the station signal becomes weak, the noise limiter effect is also decreased. The amplification of the limiter, in turn, is enlarged and emits a larger noise	The unit is not at fault. Reduce the sound level before turning the TUNING knob.
FM-MPX stereo reception	A. Noise heard during FM-MPX stereo reception while not heard during FM mono reception	* Weaker signal because the service area of the FM-MPX broadcast is only half that of the FM mono broadcast	* Install an antenna for maximum antenna input * Switch on the NOISE FILTER and/or turn the TREBLE control properly from midpoint to left
	B. Clearness of channel separation is decreased during the reception	* Improper ventilation. Air circulation is important to the amplifier's performance	* Make sure that air can flow above and below the unit
	C. The stereo indicator goes on and off	* Interference. The indicator is not at fault.	Adjust VR <sub>502</sub>
	D. The stereo indicator goes on and off even though a stereo station is not received	* Interference. The indicator is not at fault.	Adjust VR <sub>502</sub>
Record or tape playing	A. Hum or howling	* Record player placed directly on the speaker box * Use of wire other than shielded wire * Loose terminal contact * Shielded wire too close to the line cord, fluorescent lamp or other electrical appliances * Nearby amateur radio station or TV transmission antenna	* Put a cushion between the player and the speaker box or separate them entirely * The connecting cord should be as short as possible * Reduce the bass loudness properly  * Consult the nearest Radio Regulatory Bureau
	B. Surface noise	* Worn or old record * Worn pick-up needle * Needle covered with dust * Improper needle pressure	* Turn the TREBLE control properly from midpoint to left * Switch on the NOISE FILTER * Use the pick-up correctly
Over all stereo programs	The BALANCE control is not at the midpoint when equal sound comes from left and right channels	* The BALANCE control should not be always set at midpoint	* Set the control to the position where equal sound comes from both channels * Check for unequal program loudness

	C. Defective overall section		See "Hum over all program sources"
	D. Defective equalizer amplifier	Insufficient capacity of capacitor	C <sub>604</sub>
Noise	A. Program source defective		Check and repair or replace
	B. Amplifier is O.K.		See "GENERAL CHART"

## TROUBLESHOOTING CHART

### FOR USE WITH A RECORD PLAYER (MAGNETIC) OR A TAPE DECK

SYMPTOM	PROBABLE CAUSE		CHECK POINT
Noisy	C. Defective overall section		See "Noise over all program sources"
	D. Defective equalizer amplifier	1. Divergence of voltage specified in "SCHEMATIC DIAGRAM OF CIRCUITS" 2. Capacitor, shorted or blown 3. Defective resistor 4. Weak or aging transistor	Measure voltage in equalizer amplifier and replace defective element $C_{601} \sim C_{606}$ , $C_{611} \sim C_{616}$ $R_{601} \sim R_{612}$ , $R_{614} \sim R_{625}$ $TR_{601}$ , $TR_{602}$

### OTHER PROGRAM SOURCES

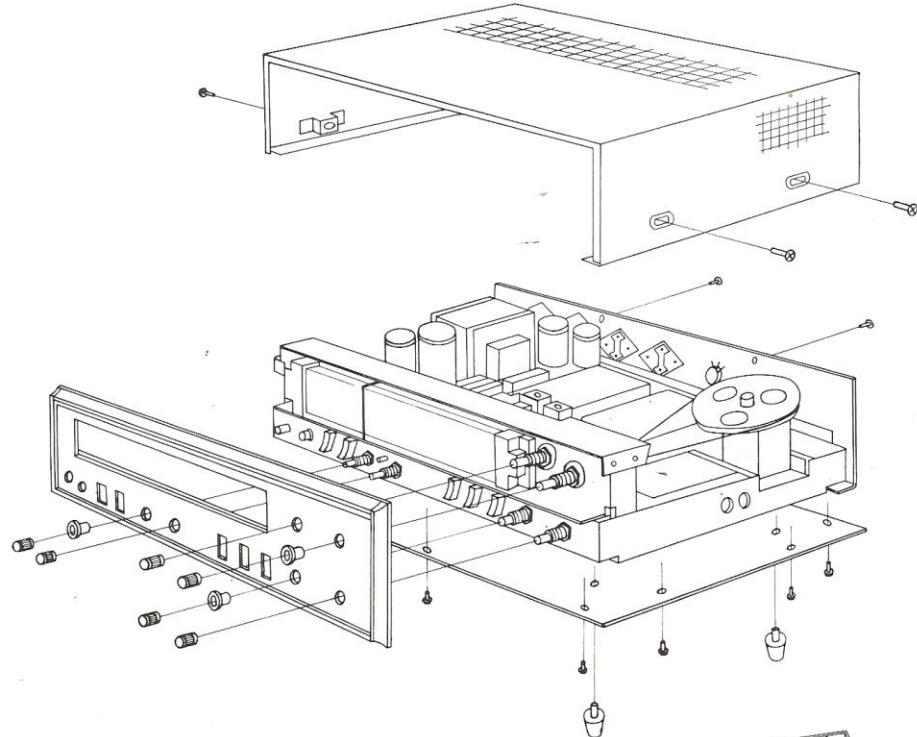

SYMPTOM	PROBABLE CAUSE	CHECK POINT
When you will listen to TV or other sound outputs, the unit does not work normally	1. Defective program source 2. Improper or incorrect connections 3. Defective overall section	Check the program source Check for improper or incorrect connections See "OVER ALL PROGRAM SOURCES"
The unit does not work normally for use with a pin-plug tape recorder	1. Defective program source 2. Improper or incorrect connections 3. Defective overall section	Check the program source. Check for improper or incorrect connections See "OVER ALL PROGRAM SOURCES"
The unit does not work normally for use with a single connector (German standard) tape recorder	1. Defective program source 2. Improper or incorrect connections 3. Defective overall section 4. Defective input circuit	Check the program source Check for improper or incorrect connections See "OVER ALL PROGRAM SOURCES" DIN connector $R_{615} \sim R_{621}$

### RECORDING ON TAPE

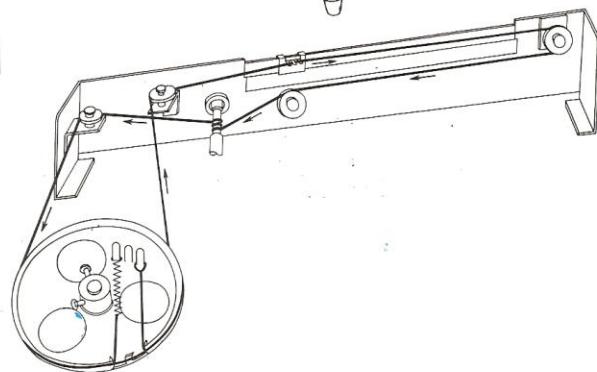

SYMPTOM	PROBABLE CAUSE	CHECK POINT
Broadcast is not recorded well	1. Defective tape or tape recorder 2. Improper or incorrect connections 3. AM, FM or FM-STEREO program source defective	Check and repair or replace
Poor recording from record or tape	1. Defective tape or tape recorder 2. Improper or incorrect connections 3. RECORD PLAYER, TAPE HEAD or AUX input defective 4. Defective equalizer amplifier	Check and repair or replace  Check and repair See "FOR USE WITH A RECORD PLAYER OR A TAPE DECK: Defective head amplifier"

## SELECTOR SWITCH CHART

Remove the bonnet and look at the switch from the back side of the amplifier. This chart tells you the location of their contact and supporting points. The smaller the circle, the nearer the points are located to the back of the amplifier.

- indicates a contact point of the selector switch.
- indicates a supporting point of the selector switch.

## ALIGNMENT PROCEDURE FOR FM TUNER

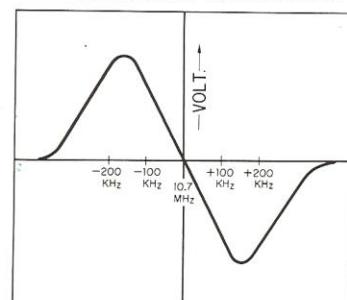

Note: To align, set the FM Signal Generator level to minimum

STEP	ALIGN	SIGNAL GENERATOR	FEED SIGNAL	DETECTOR OUTPUT	DIAL SETTING	ADJUST	ADJUST FOR
1.	IF transformer	10.7MHz ±200KHz sweep generator	Antenna terminal	Connect oscilloscope to Test Point TP <sub>201</sub> through 0.02μF ceramic capacitor		Primary and secondary of IF transformer (T <sub>101</sub> , T <sub>201</sub> , T <sub>202</sub> , T <sub>203</sub> )	Best wave form
2.	Discriminator	10.7MHz ±200KHz sweep generator	Antenna terminal	Connect oscilloscope to TP <sub>202</sub> through CR circuit as shown right		Primary and secondary of discriminator transformer (T <sub>204</sub> )	S curve 
3.	Local oscillator	FM signal generator 88MHz, 400Hz, 100% modulation	Antenna terminal	Connect oscilloscope and V.T.V.M. to load terminal (8 ohms)	88MHz	Local oscillator coil (L <sub>103</sub> )	Maximum wave form
4.	Local oscillator	FM signal generator 108MHz, 400Hz, 100% modulation	Antenna terminal	Connect oscilloscope and V.T.V.M. to load terminal (8 ohms)	108MHz	Local oscillator trimmer capacitor (TC <sub>103</sub> )	Maximum wave form
5.	Same as steps 3 and 4						
6.	High-frequency amp. circuit	FM signal generator 88MHz, 400Hz, 100% modulation	Antenna terminal	Connect oscilloscope and V.T.V.M. to load terminal (8 ohms)	88MHz	Antenna coil (L <sub>102</sub> and L <sub>104</sub> )	Maximum wave form
7.	High-frequency amp. circuit	FM signal generator 108MHz, 400Hz, 100% modulation	Antenna terminal	Connect oscilloscope and V.T.V.M. to load terminal (8 ohms)	108MHz	Trimmer capacitor (TC <sub>101</sub> and TC <sub>102</sub> )	Maximum wave form
8.	Same as steps 6 and 7						
9.	Antenna	FM signal generator 98MHz, 400Hz, 100% modulation	Antenna terminal	Connect oscilloscope and V.T.V.M. to load terminal (8 ohms)	98MHz	Antenna coil (L <sub>101</sub> )	Maximum wave form

## ALIGNMENT PROCEDURE FOR FM MPX AND INDICATOR

1. Do not attempt to align the Multiplex Circuit unless the following equipment is available:

a. Multiplex Stereo Generator b. Oscilloscope c. V.T.V.M. d. Audio Generator e. FM Signal Generator

STEP	ALIGN	SIGNAL GENERATOR	FEED SIGNAL	DETECTOR OUTPUT	ADJUST	ADJUST FOR
1.	67KHz trap	Audio signal generator, 67KHz	TP <sub>4A</sub>	Connect V.T.V.M. to TP <sub>401</sub>	L <sub>401</sub> (MFC-A)	Minimum wave form
2.	71KHz trap	Audio signal generator, 71KHz	TP <sub>4A</sub>	Connect V.T.V.M. to TP <sub>401</sub>	L <sub>402</sub> (MFC-B)	Minimum wave form
3.	19KHz tuning coil	1) FM signal generator, 98MHz, 60dB 2) Stereo signal generator, 100% modulation of composite signal (L or R) including pilot signal	Antenna terminal	Connect oscilloscope and V.T.V.M. to TP <sub>402</sub>	T <sub>401</sub> (MPT-20A)	Maximum wave form
4.	19KHz tuning coil	1) FM signal generator, 98MHz, 60dB 2) Stereo signal generator, 100% modulation of composite signal (L or R) including pilot signal	Antenna terminal	Connect oscilloscope and V.T.V.M. to: 1) TP <sub>402</sub> or 2) Lead on coil side of D <sub>401</sub> and D <sub>402</sub>	T <sub>402</sub> (MPT-20B)	1) Maximum point of upper and lower cores connected 2) Maximum wave form
5.	19KHz tuning coil	1) FM signal generator, 98MHz, 60dB 2) Stereo signal generator, 100% modulation of composite signal (L or R) including pilot signal	Antenna terminal	Connect V.T.V.M. to TP <sub>501</sub>	T <sub>501</sub> (MPT-14A)	1) Maximum wave form 2) In this case, VR <sub>501</sub> and VR <sub>502</sub> should be at central point of the operation of the indicator
6.	38KHz tuning coil	1) FM signal generator, 98MHz, 60dB 2) Stereo signal generator, 100% modulation of composite signal (L or R) including pilot signal	Antenna terminal	Connect oscilloscope and V.T.V.M. to: 1) TP <sub>403</sub> or 2) Lead on coil side of D <sub>403</sub> ~D <sub>406</sub>	T <sub>403</sub> (MPT-20B)	1) Maximum point of upper and lower cores connected 2) Maximum wave form
7.	38KHz tuning coil Separation VR	1) FM signal generator, 98MHz, 60dB 2) Stereo signal generator, 100% modulation of composite signal (L or R) including pilot signal	Antenna terminal	Connect oscilloscope and V.T.V.M. to load terminal	T <sub>403</sub> (MPT-20B) VR <sub>401</sub>	1) Observe the wave form of the L channel output and adjust it to maximum within $\frac{1}{4}$ turn of T <sub>403</sub> 2) Adjust the separation VR (VR <sub>401</sub> ) for optimum separation

## ALIGNMENT FOR AM TUNER

Note: To align, set the AM Signal Generator level to minimum

STEP	ALIGN	SIGNAL GENERATOR	FEED SIGNAL	DETECTOR OUTPUT	DIAL SETTING	ADJUST	ADJUST FOR
1.	IF transformer	Sweep generator, 455KHz $\pm$ 30KHz	Antenna terminal	Connect oscilloscope to TP <sub>3F</sub>	Set to the position in which the generator is not affected during the broadcast	Primary and secondary of IF transformer (T <sub>302</sub> ~T <sub>305</sub> )	Best wave form
2.	Local oscillator	AM signal generator, 535KHz, 400Hz, 30% modulation	Antenna terminal	Connect oscilloscope and V.T.V.M. to load terminal	535KHz	Local oscillator coil (T <sub>301</sub> )	Maximum wave form
3.	Local oscillator	AM signal generator, 1605KHz, 400Hz, 30% modulation	Antenna terminal	Connect oscilloscope and V.T.V.M. to load terminal	1605KHz	Local oscillator trimmer capacitor (TC <sub>302</sub> )	Maximum wave form
4.	Same as steps 2 and 3						
5.	High-frequency amp	AM signal generator, 600KHz, 400Hz, 30% modulation	Antenna terminal	Connect oscilloscope and V.T.V.M. to load terminal	600KHz	Ferrite bar antenna coil (L <sub>301</sub> )	Maximum wave form
6.	High-frequency amp	AM signal generator, 1400KHz, 400Hz, 30% modulation	Antenna terminal	Connect oscilloscope and V.T.V.M. to load terminal	1400KHz	Trimmer capacitor (TC <sub>301</sub> )	Maximum wave form
7.	Same as steps 5 and 6 Check 1,000 KHz as well and adjust so that there is not a remarkable difference in sensitivity between them
