## 2. OPERATION

### 2-1. Protector Circuit with IC, HA12002

Fig. 2-1

The function of temperature detection is not used in this model.

#### Protector circuit with IC, HA-12002 (See Fig. 2-1, 2-2)

This protector IC provides the input terminals for detecting  $\pm$ DC voltage, overload, temperature rise, and pop-noise occurred at switching the power, and output terminal for switching the speaker relay. By the function above, when there are any disorder with amplifier, the output is immediately separated from speaker.

##### \* Prevention against pop-noise at switching the power.

Since the relay RL601 remains OFF for a certain period by the time constant of R611 and C624 when power switch is turned ON, the pop-noise can be eliminated. When turning OFF the power switch, the voltage drop of pin No. 5 is faster than that of Pin No. 7, 8, therefore, the speaker relay turns OFF as soon as power is switched OFF. Resultly, the pop-noise occurred at switching the power OFF is eliminated.

##### \* $\pm$ DC voltage detection

When DC voltage over  $+1.6V$  and under  $-1.86V$  are applied to pin No. 3 to be its voltage detected by R01, R02, and C626, the speaker relay is turned OFF.

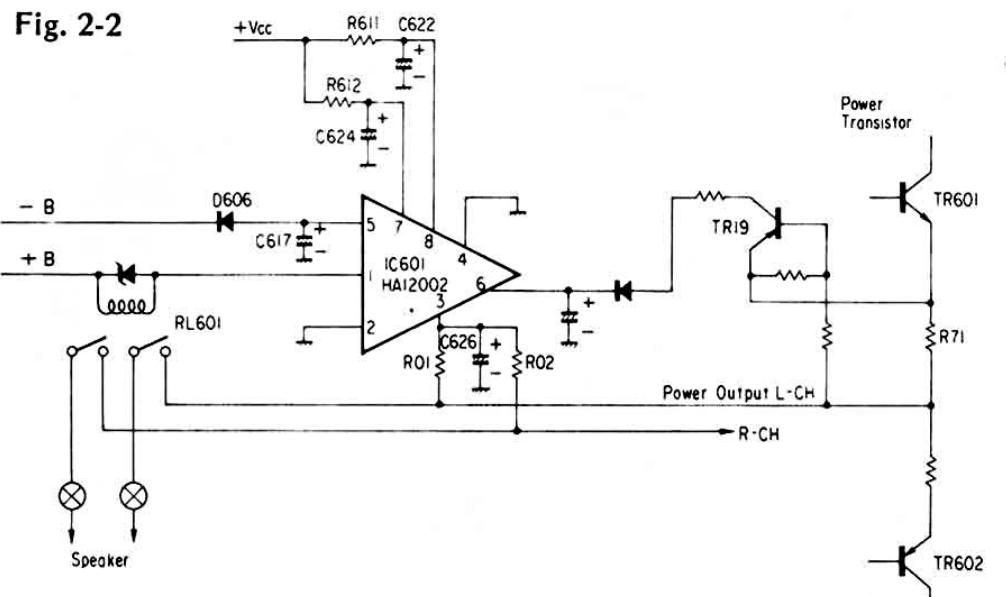

##### \* Detection against overload

When speaker terminal of amplifier is shorted or over loaded, the excessive current flows into emitter resistor R71 of power transistor and makes TR19 ON and if the DC voltage of pin No. 6 rises over  $+1.4V$  by above phenomenon, the relay is turned OFF. The relay is kept OFF in spite of the DC voltage being dropped. In order to reset the relay, it is necessary to turn the power switch OFF.

##### \* Detection against temperature rise

As this function is not used in this model, pin No. 4 is grounded.

### • NEW MEASUREMENT FOR FM.

Input signal level under the provision of IHFM-T-200, a new measurement method is indicated by available power ratio "dBf". To obtain approximate available power ratio "dBf", abstract 0.8 from attenuator indication of general FMSG (open load indication type); however, the former measurement, IHFM-T-100 is designated together too.

The way of modulation on IHFM-T-200 is shown below.

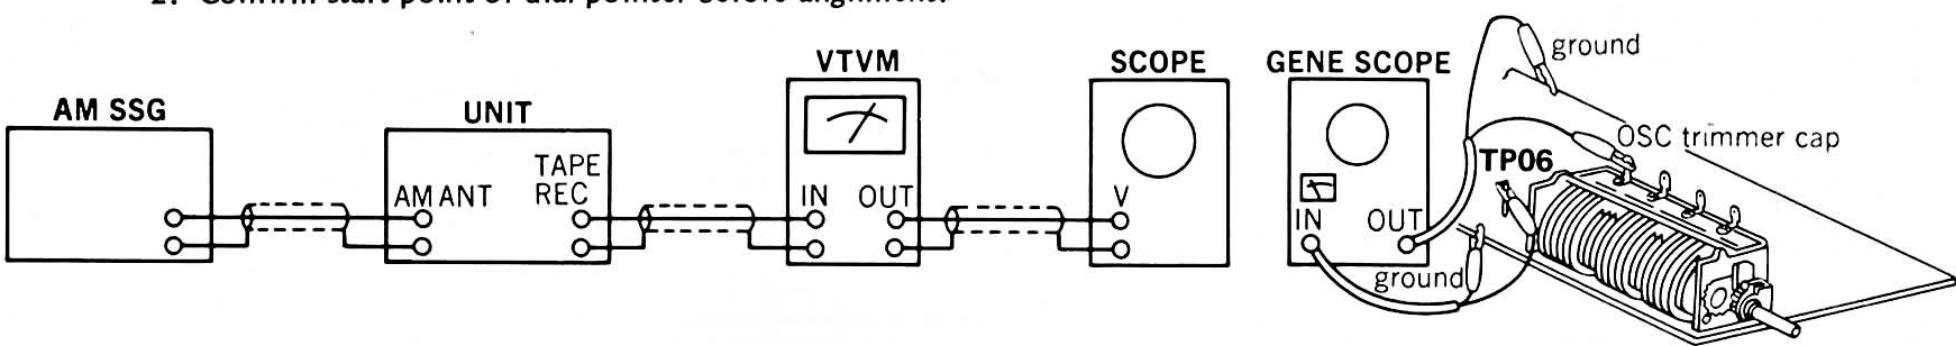

- The relation between the standard input 65 dBf of IHFM-T-200 and the former indication "dB" is shown below.
