

# SERVICE MANUAL

SOLID-STATE AM/FM STEREO PHONIC TUNER AMPLIFIER

SANSUI MODEL 400

*Sansui*®

SANSUI ELECTRIC COMPANY LIMITED

**SANSUI**  
**SOLID-STATE**  
**am/fm-mulutplex**  
**STEREO TUNER AMPLIFIER**

**MODEL-400**

**HOW TO USE THIS SERVICE MANUAL**

1. Look up the type of trouble you are confronted with in either the General Troubleshooting charts provided in this manual from pp 2-11.
2. By referring to the charts, isolate the trouble to a particular unit or part. (See the column titled "What To Do" in the General Chart and "Check Point" in the Troubleshooting Chart)
3. Locate the section of the chassis (Parts Layout P. 13), in which the part is located by using the co-ordinates (Column D) in the Parts List pp. 25-29.
4. Using the co-ordinates given in the Parts List (Column C), pinpoint the position of the part in the Schematic Diagram of Circuits, pp. 15-16.

NOTE: Much of the information contained in this manual has been prepared for use by qualified service repairmen. Please read your Warranty thoroughly before attempting any internal adjustments on your own.

## GENERAL CHART

If the amplifier is otherwise operating satisfactorily, the more common causes of trouble may generally be attributed to the following:

1. Incorrect connections or loose terminal contacts. Check the speakers, record player, tape recorder, antenna and line cord.
2. Improper operation.

Before operating any audio component, be sure to the

manufacturer's instructions.

3. Improper location of audio components. The proper positioning of components, such as speakers and turntable, is vital to stereo.
4. Defective audio components.

The following are some other common causes of malfunction and what to do about them.

| PROGRAM                    | SYMPTOM  | PROBABLE CAUSE  | WHAT TO DO  |
|----------------------------|--|---|---|
| AM, FM or FM-MPX reception | A. Constant or intermittent noise heard at certain times or in a certain area            | <ul style="list-style-type: none"> <li>* Discharge or oscillation caused by electrical appliances, such as fluorescent lamp, TV set, A.C. motor, rectifier and oscillator</li> <li>* Natural phenomena, such as atmospheric conditions, statics and thunderbolts</li> <li>* Insufficient antenna input due to reinforced concrete walls or long distance from the broadcasting station</li> <li>* Wave interference from other electrical appliances</li> </ul> | <ul style="list-style-type: none"> <li>* Attach a noise limiter to the electrical appliance that causes the noise, or attach it to the power source of the amplifier</li> <li>* Install an outdoor antenna and ground the amplifier to raise the signal-to-noise ratio</li> <li>* Reverse the power cord plug-receptacle connections</li> <li>* If the noise occurs at a certain frequency, attach a wave trap to the ANT. input</li> <li>* Keep the set at a proper distance from other electrical appliances</li> </ul> |
|                            | B. The needle of the tuning indicator does not move well.                                | See Operating Instructions Manual, "Tuning Indicator" for explanation   | Tune the set for maximum signal strength  |
| AM reception               | A. Noise heard at a particular time of a day, in a certain area or over part of the dial | Natural phenomenon of AM reception  | <ul style="list-style-type: none"> <li>* Install an antenna for maximum antenna efficiency. See "ANTENNA" in the Operating Instructions manual</li> <li>* In some cases, the noise can be eliminated by grounding the amplifier or reversing the power cord plug-receptacle connections</li> </ul>  |
|                            | B. High-frequency noise  | <ol style="list-style-type: none"> <li>1. Adjacent-channel interference or beat interference</li> <li>2. TV set too close to the audio system</li> </ol>  | <ul style="list-style-type: none"> <li>* Although such noise cannot be eliminated by the amplifier, it is advisable to turn the TREBLE control properly from midpoint to left and switch on the NOISE FILTER</li> <li>* Keep the TV set at a proper distance from the audio system</li> </ul>   |
| FM reception               | A. Noisy   | <p>Poor noise limiter effect or too low S/N ratio due to insufficient antenna input</p> <p>Note: FM reception is affected considerably by the broadcasting station's power and antenna efficiency. As a result, you may receive one station quite well while having difficulty in receiving another station.</p>  | <ul style="list-style-type: none"> <li>* Install an antenna (provided) for maximum signal strength</li> <li>* If this is not effective, use an outdoor antenna designed exclusively for FM. When you use a TV antenna for both TV and FM with the help of a divider, make sure the TV reception is not affected</li> <li>* An excessively long antenna may cause noise</li> </ul>   |

# GENERAL CHART

| PROGRAM                     | SYMPTOM  | PROBABLE CAUSE   | WHAT TO DO   |
|-----------------------------|--|--|--|
| FM reception<br>(continued) | B. Emission of a scratching sound  | * Ignition noise caused by the starting of an automobile engine  | * Install the antenna and its lead-in wire at proper distance from the road or raise the antenna input as previously described.  |
|                             | C. Distortion or no sound during the reception   | * Tuning drift results from the nature of FM   | The built-in automatic frequency control prevents distortion during FM reception. If the FM program should be out of tune due to mechanical vibration or other factors, retune it.   |
|                             | D. Tuning noise between stations   | * This noise results from the nature of FM reception. As the station signal becomes weak, the noise limiter effect is also decreased. The amplification of the limiter, in turn, is enlarged and emits a larger noise  | The unit is not at fault. Reduce the sound level before turning the TUNING knob.   |
| FM-MPX stereo reception     | A. Noise heard during FM-MPX stereo reception while not heard during FM mono reception         | * Weaker signal because the service area of the FM-MPX broadcast is only half that of the FM mono broadcast  | * Install an antenna for maximum antenna input<br>* Switch on the NOISE FILTER and/or turn the TREBLE control properly from midpoint to left   |
|                             | B. Clearness of channel separation is decreased during the reception                           | * Improper ventilation. Air circulation is important to the amplifier's performance  | * Make sure that air can flow above and below the unit   |
|                             | C. The stereo indicator goes on and off  | * Interference. The indicator is not at fault.   | Adjust VR <sub>502</sub>   |
|                             | D. The stereo indicator goes on and off even though a stereo station is not received           | * Interference. The indicator is not at fault.   | Adjust VR <sub>502</sub>   |
| Record or tape playing      | A. Hum or howling  | * Record player placed directly on the speaker box<br>* Use of wire other than shielded wire<br>* Loose terminal contact<br>* Shielded wire too close to the line cord, fluorescent lamp or other electrical appliances<br>* Nearby amateur radio station or TV transmission antenna | * Put a cushion between the player and the speaker box or separate them entirely<br>* The connecting cord should be as short as possible<br>* Reduce the bass loudness properly<br><br>* Consult the nearest Radio Regulatory Bureau |
|                             | B. Surface noise   | * Worn or old record<br>* Worn pick-up needle<br>* Needle covered with dust<br>* Improper needle pressure  | * Turn the TREBLE control properly from midpoint to left<br>* Switch on the NOISE FILTER<br>* Use the pick-up correctly  |
| Over all stereo programs    | The BALANCE control is not at the midpoint when equal sound comes from left and right channels | * The BALANCE control should not be always set at midpoint   | * Set the control to the position where equal sound comes from both channels<br>* Check for unequal program loudness   |

# TROUBLESHOOTING CHART

## OVER ALL PROGRAM SOURCES

| SYMPTOM                             | PROBABLE CAUSE                     |   | CHECK POINT   |
|-------------------------------------|------------------------------------|---|---|
| No sound over all program sources   | A. Defective speaker               | 1. Broken speaker cord<br>2. Broken or short-circuited voice coil   | Check continuity of speaker and cord<br>Repair broken cord or replace speaker   |
|                                     | B. No power                        | 1. No power comes to the power source<br>2. Defective on-off switch<br>3. Defective power cord<br>4. Loose plug contact<br>5. Blown fuse<br><br>If the fuse burns out as soon as it is replaced, the trouble may be attributed to:<br>a. Shorted power transformer;<br>b. Shorted capacitor;<br>c. +B circuit open.<br><br>6. Broken primary winding of power transformer   | S <sub>001</sub><br><br>PV <sub>001</sub><br>F <sub>001</sub><br><br>T <sub>001</sub><br>C <sub>001</sub> , C <sub>003</sub><br>Check voltage in B circuit by means of a tester<br>T <sub>001</sub>   |
|                                     | C. Defective power circuit         | Divergence of voltage specified in "SCHEMATIC DIAGRAM OF CIRCUITS"  | Measure voltage in power circuit and replace defective element  |
|                                     | D. Defective low-frequency circuit | 1. Divergence of voltage specified in "SCHEMATIC DIAGRAM OF CIRCUITS"<br><br>Note: If the PROTECTOR indicator should light up, push the POWER switch OFF and after about 5 seconds push it ON. If the indicator should still light up, push it OFF again and check for shorting of speaker terminals and improper connections between them.<br><br>2. Blown fuse<br><br>If the fuse burns out as soon as it is replaced, the trouble may be attributed to:<br>a. Defective main amplifier section<br>b. Shorted power transistor<br>c. Output terminals in contact with each other<br>3. Defective transistor<br>4. Electrolytic condenser, short or open | Measure voltage in low-frequency circuit and replace defective element.<br><br>F <sub>001</sub> , F <sub>002</sub><br><br>TR <sub>501</sub> ~TR <sub>502</sub> , TR <sub>503</sub> ~TR <sub>504</sub><br>⊕ and ⊖ terminals of right and left channels<br>Check voltage in each section.<br>Check voltage in each section. |
|                                     | E. Troubles other than electrical  | 1. TAPE MONITOR switch in ON position<br>2. Headphone plugged in jack   | Turn the TAPE MONITOR switch OFF.<br>Remove the headphone plug.   |
| Weak sound over all program sources | A. Defective speaker circuit       | Shorted voice coil  | Check voice coil for short circuit.   |

SIDE VIEW OF BACK PANEL

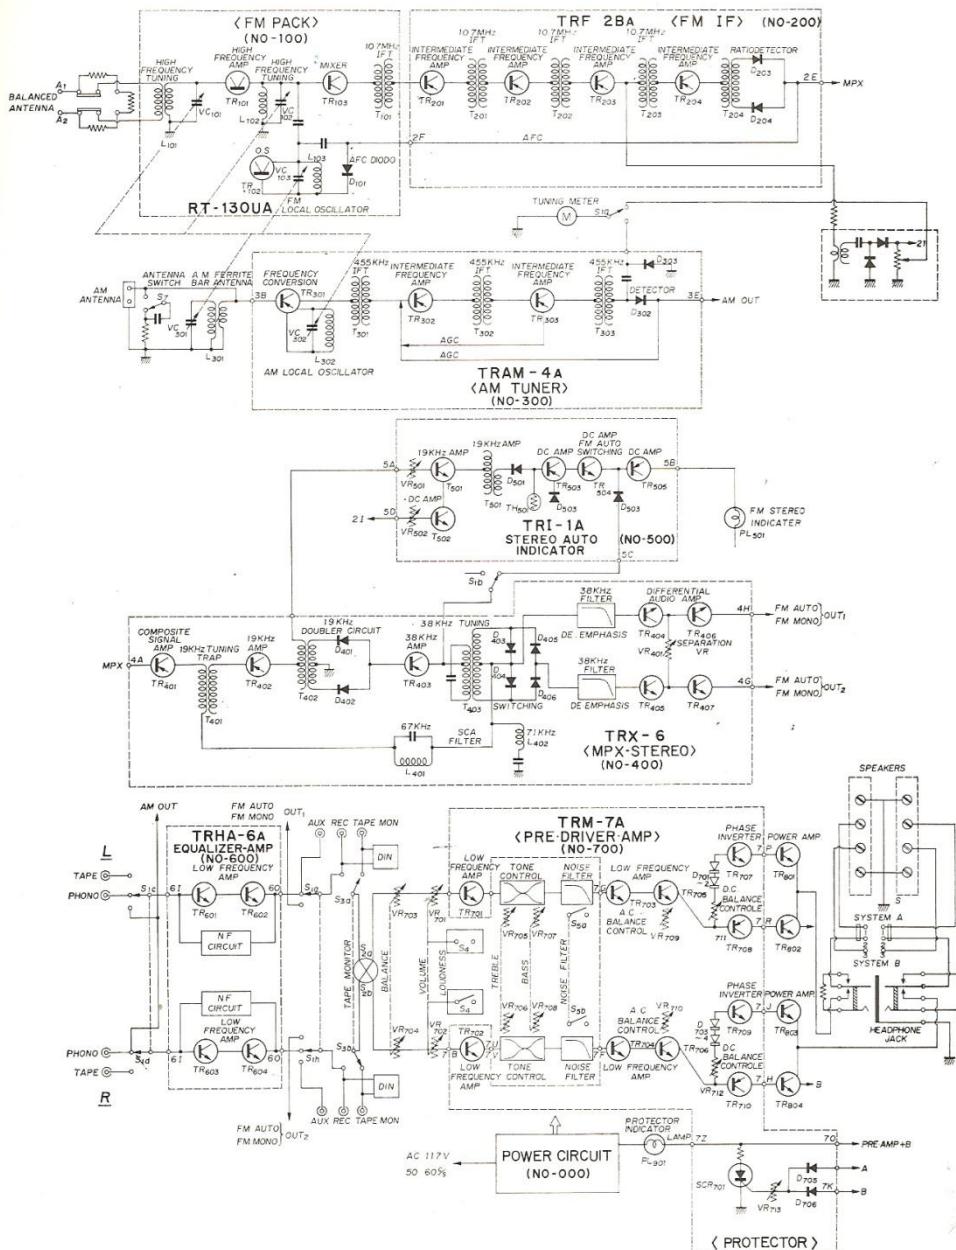

TOP VIEW OF LOWER CHASSIS

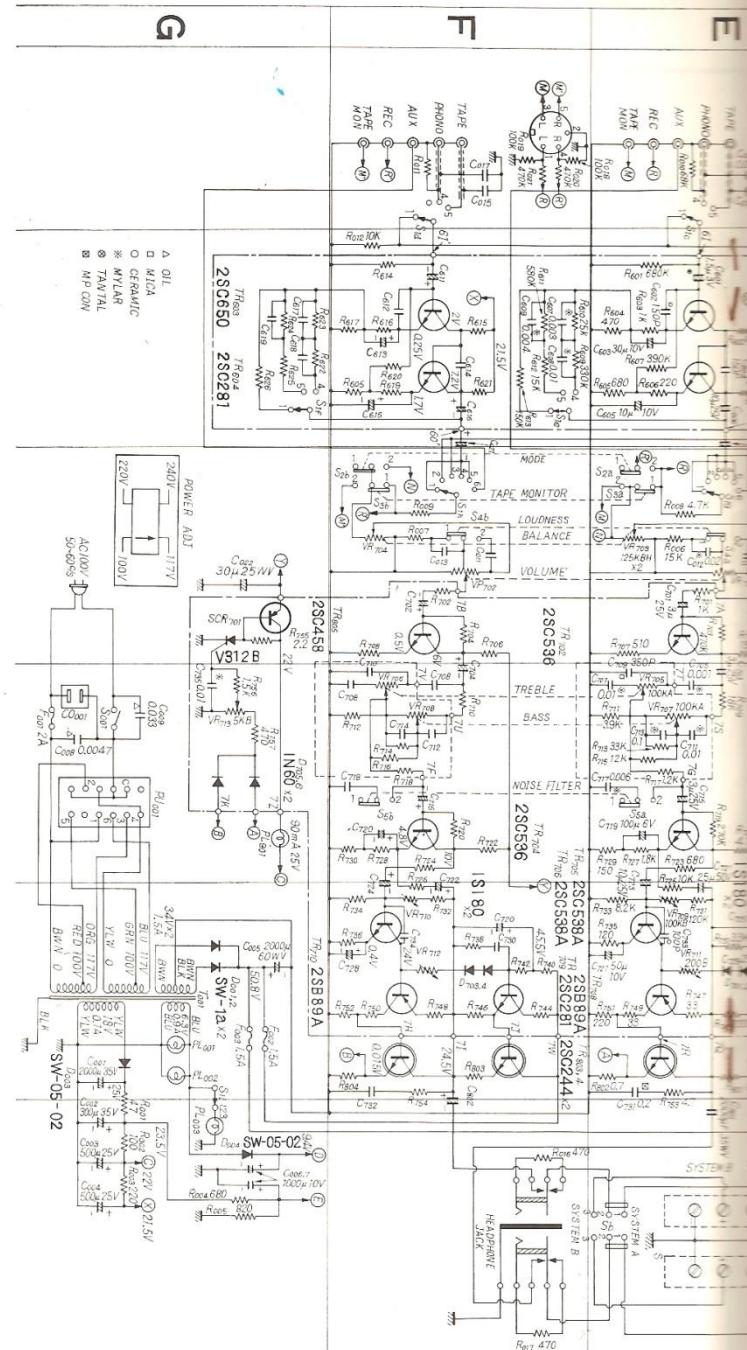

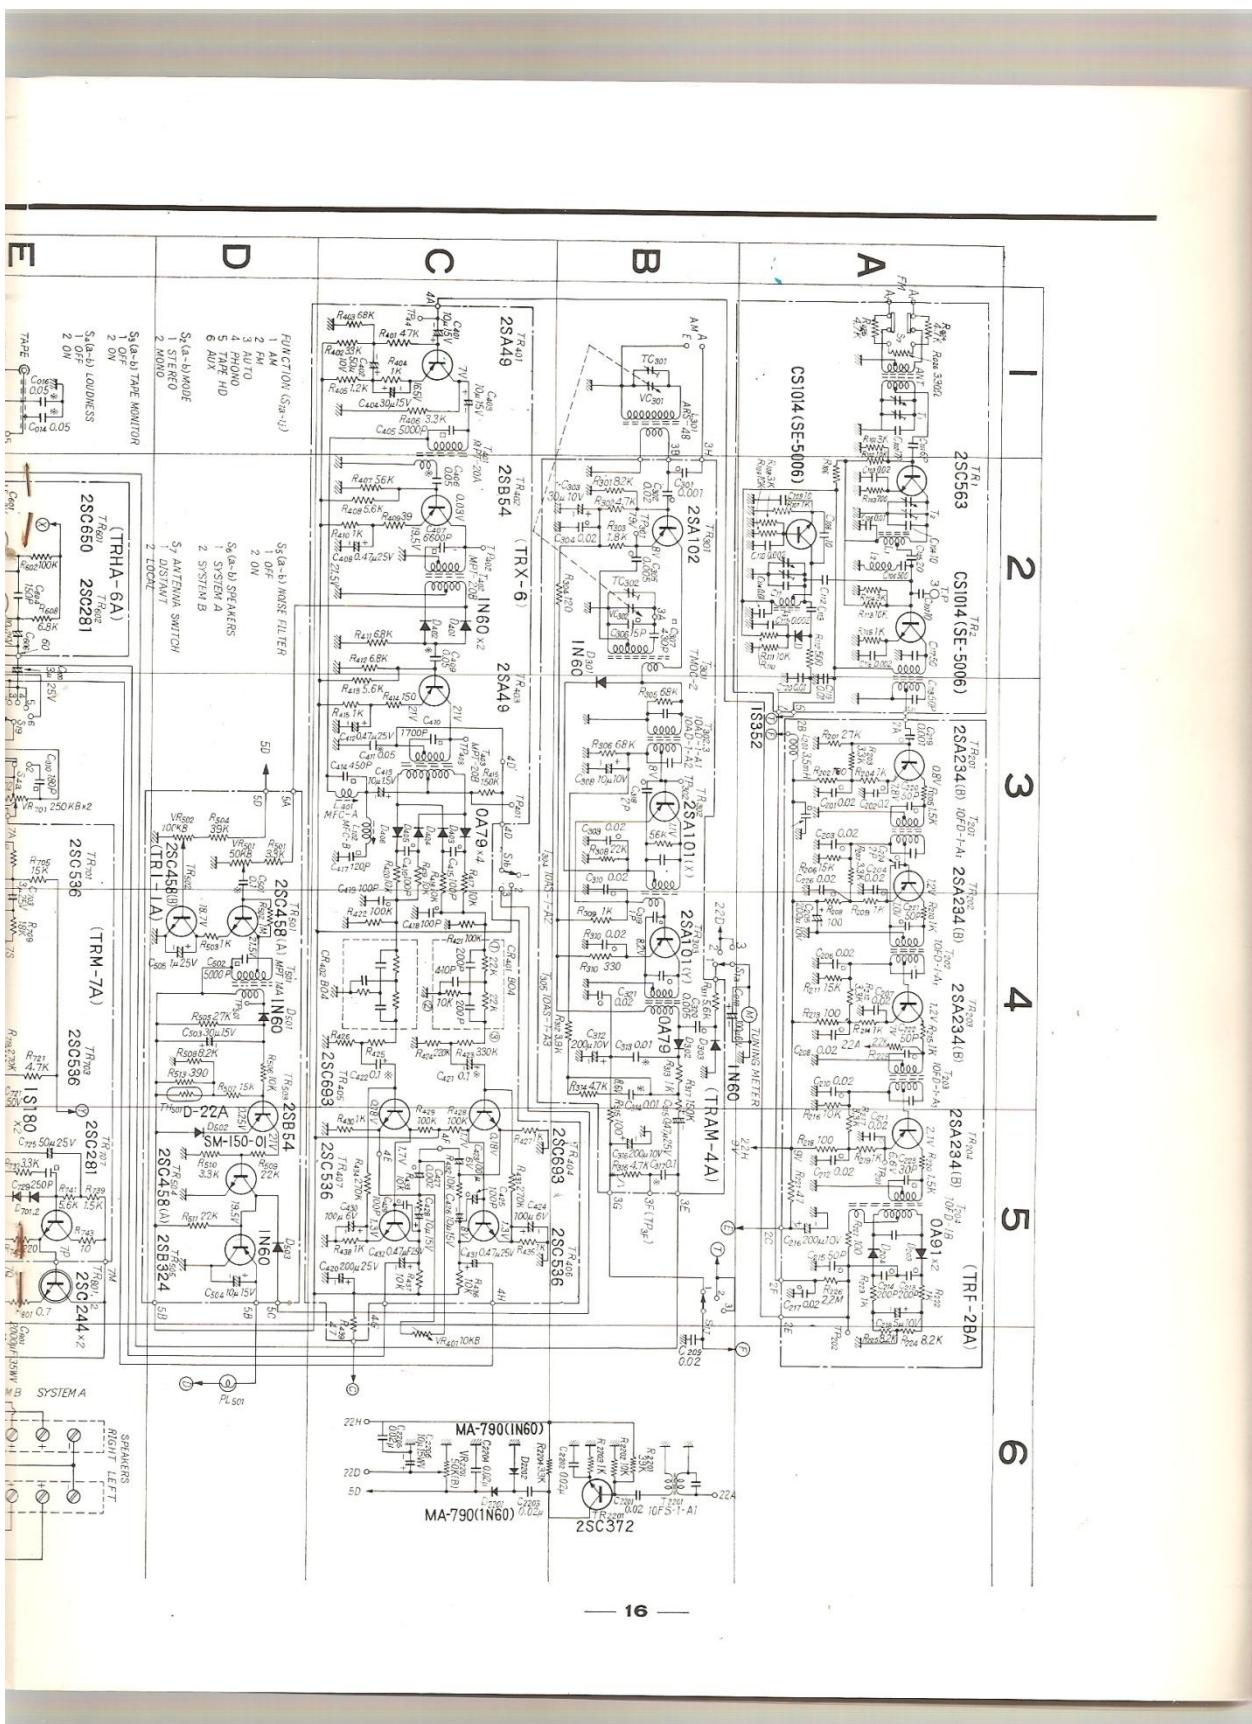

# BLOCK DIAGRAM OF PRINTED CIRCUIT

(See "PRINTED CIRCUIT SHEETS"—P. 22)

# SCHEMATIC DIAGRAM OF CIRCUITS

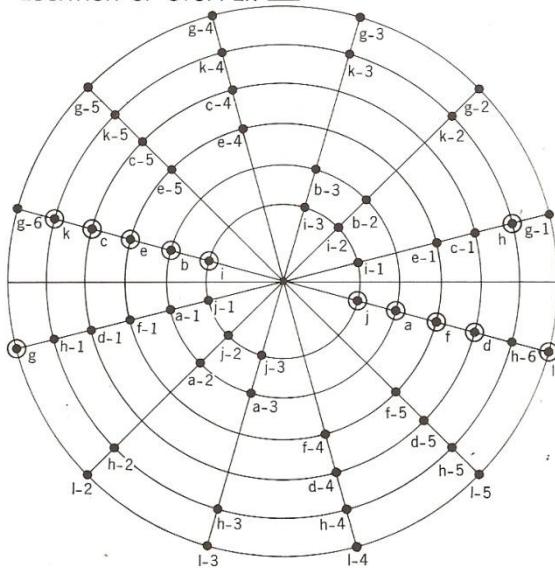

# SELECTOR SWITCH CHART

Remove the bonnet and look at the switch from the back side of the amplifier. This chart tells you the location of their contact and supporting points. The smaller the circle, the nearer the points are located to the back of the amplifier.

- indicates a contact point of the selector switch.
- indicates a supporting point of the selector switch.

LOCATION OF STOPPER 

## SELECTOR SWITCH

## ALIGNMENT PROCEDURE FOR FM TUNER

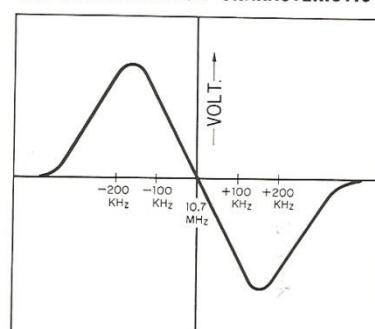

Note: To align, set the FM Signal Generator level to minimum

| STEP | ALIGN                       | SIGNAL GENERATOR                                   | FEED SIGNAL      | DETECTOR OUTPUT   | DIAL SETTING | ADJUST   | ADJUST FOR   |
|------|-----------------------------|--|------------------|---|--------------|--|--|
| 1.   | IF transformer              | 10.7MHz ±200KHz sweep generator                    | Antenna terminal | Connect oscilloscope to Test Point TP <sub>201</sub> through 0.02μF ceramic capacitor |              | Primary and secondary of IF transformer (T <sub>101</sub> , T <sub>201</sub> , T <sub>202</sub> , T <sub>203</sub> ) | Best wave form   |
| 2.   | Discriminator               | 10.7MHz ±200KHz sweep generator                    | Antenna terminal | Connect oscilloscope to TP <sub>202</sub> through CR circuit as shown right           |              | Primary and secondary of discriminator transformer (T <sub>204</sub> )   | S curve<br> |
| 3.   | Local oscillator            | FM signal generator 88MHz, 400Hz, 100% modulation  | Antenna terminal | Connect oscilloscope and V.T.V.M. to load terminal (8 ohms)                           | 88MHz        | Local oscillator coil (L <sub>103</sub> )  | Maximum wave form  |
| 4.   | Local oscillator            | FM signal generator 108MHz, 400Hz, 100% modulation | Antenna terminal | Connect oscilloscope and V.T.V.M. to load terminal (8 ohms)                           | 108MHz       | Local oscillator trimmer capacitor (TC <sub>103</sub> )  | Maximum wave form  |
| 5.   | Same as steps 3 and 4       |  |                  |   |              |  |  |
| 6.   | High-frequency amp. circuit | FM signal generator 88MHz, 400Hz, 100% modulation  | Antenna terminal | Connect oscilloscope and V.T.V.M. to load terminal (8 ohms)                           | 88MHz        | Antenna coil (L <sub>102</sub> and L <sub>104</sub> )  | Maximum wave form  |
| 7.   | High-frequency amp. circuit | FM signal generator 108MHz, 400Hz, 100% modulation | Antenna terminal | Connect oscilloscope and V.T.V.M. to load terminal (8 ohms)                           | 108MHz       | Trimmer capacitor (TC <sub>101</sub> and TC <sub>102</sub> )   | Maximum wave form  |
| 8.   | Same as steps 6 and 7       |  |                  |   |              |  |  |
| 9.   | Antenna                     | FM signal generator 98MHz, 400Hz, 100% modulation  | Antenna terminal | Connect oscilloscope and V.T.V.M. to load terminal (8 ohms)                           | 98MHz        | Antenna coil (L <sub>101</sub> )   | Maximum wave form  |

FM IF CHARACTERISTIC

FM DISCRIMINATOR CHARACTERISTIC

## ALIGNMENT PROCEDURE FOR FM MPX AND INDICATOR

1. Do not attempt to align the Multiplex Circuit unless the following equipment is available:

a. Multiplex Stereo Generator b. Oscilloscope c. V.T.V.M. d. Audio Generator e. FM Signal Generator

| STEP | ALIGN                           | SIGNAL GENERATOR   | FEED SIGNAL      | DETECTOR OUTPUT   | ADJUST  | ADJUST FOR   |
|------|---------------------------------|--|------------------|---|---|--|
| 1.   | 67KHz trap                      | Audio signal generator, 67KHz  | TP <sub>4A</sub> | Connect V.T.V.M. to TP <sub>401</sub>   | L <sub>401</sub> (MFC-A)                        | Minimum wave form  |
| 2.   | 71KHz trap                      | Audio signal generator, 71KHz  | TP <sub>4A</sub> | Connect V.T.V.M. to TP <sub>401</sub>   | L <sub>402</sub> (MFC-B)                        | Minimum wave form  |
| 3.   | 19KHz tuning coil               | 1) FM signal generator, 98MHz, 60dB<br>2) Stereo signal generator, 100% modulation of composite signal (L or R) including pilot signal | Antenna terminal | Connect oscilloscope and V.T.V.M. to TP <sub>402</sub>  | T <sub>401</sub> (MPT-20A)                      | Maximum wave form  |
| 4.   | 19KHz tuning coil               | 1) FM signal generator, 98MHz, 60dB<br>2) Stereo signal generator, 100% modulation of composite signal (L or R) including pilot signal | Antenna terminal | Connect oscilloscope and V.T.V.M. to:<br>1) TP <sub>402</sub> or<br>2) Lead on coil side of D <sub>401</sub> and D <sub>402</sub> | T <sub>402</sub> (MPT-20B)                      | 1) Maximum point of upper and lower cores connected<br>2) Maximum wave form  |
| 5.   | 19KHz tuning coil               | 1) FM signal generator, 98MHz, 60dB<br>2) Stereo signal generator, 100% modulation of composite signal (L or R) including pilot signal | Antenna terminal | Connect V.T.V.M. to TP <sub>501</sub>   | T <sub>501</sub> (MPT-14A)                      | 1) Maximum wave form<br>2) In this case, VR <sub>501</sub> and VR <sub>502</sub> should be at central point of the operation of the indicator  |
| 6.   | 38KHz tuning coil               | 1) FM signal generator, 98MHz, 60dB<br>2) Stereo signal generator, 100% modulation of composite signal (L or R) including pilot signal | Antenna terminal | Connect oscilloscope and V.T.V.M. to:<br>1) TP <sub>403</sub> or<br>2) Lead on coil side of D <sub>403</sub> ~D <sub>406</sub>    | T <sub>403</sub> (MPT-20B)                      | 1) Maximum point of upper and lower cores connected<br>2) Maximum wave form  |
| 7.   | 38KHz tuning coil Separation VR | 1) FM signal generator, 98MHz, 60dB<br>2) Stereo signal generator, 100% modulation of composite signal (L or R) including pilot signal | Antenna terminal | Connect oscilloscope and V.T.V.M. to load terminal  | T <sub>403</sub> (MPT-20B)<br>VR <sub>401</sub> | 1) Observe the wave form of the L channel output and adjust it to maximum within $\frac{1}{4}$ turn of T <sub>403</sub><br>2) Adjust the separation VR (VR <sub>401</sub> ) for optimum separation |

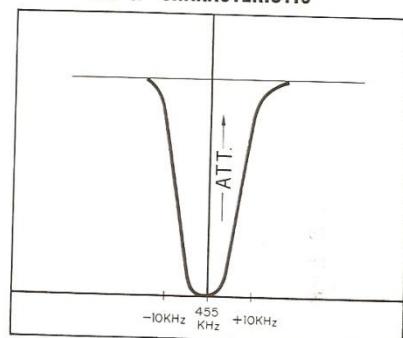

# ALIGNMENT

## ALIGNMENT FOR AM TUNER

Note: To align, set the AM Signal Generator level to minimum

| STEP | ALIGN  | SIGNAL GENERATOR                                    | FEED SIGNAL      | DETECTOR OUTPUT                                    | DIAL SETTING  | ADJUST  | ADJUST FOR        |
|------|--|---|------------------|--|---|---|-------------------|
| 1.   | IF transformer   | Sweep generator, 455KHz $\pm$ 30KHz                 | Antenna terminal | Connect oscilloscope to TP <sub>3F</sub>           | Set to the position in which the generator is not affected during the broadcast | Primary and secondary of IF transformer (T <sub>302</sub> ~T <sub>303</sub> ) | Best wave form    |
| 2.   | Local oscillator   | AM signal generator, 535KHz, 400Hz, 30% modulation  | Antenna terminal | Connect oscilloscope and V.T.V.M. to load terminal | 535KHz  | Local oscillator coil (T <sub>301</sub> )                                     | Maximum wave form |
| 3.   | Local oscillator   | AM signal generator, 1605KHz, 400Hz, 30% modulation | Antenna terminal | Connect oscilloscope and V.T.V.M. to load terminal | 1605KHz   | Local oscillator trimmer capacitor (TC <sub>302</sub> )                       | Maximum wave form |
| 4.   | Same as steps 2 and 3  |   |                  |  |   |   |                   |
| 5.   | High-frequency amp   | AM signal generator, 600KHz, 400Hz, 30% modulation  | Antenna terminal | Connect oscilloscope and V.T.V.M. to load terminal | 600KHz  | Ferrite bar antenna coil (L <sub>301</sub> )                                  | Maximum wave form |
| 6.   | High-frequency amp   | AM signal generator, 1400KHz, 400Hz, 30% modulation | Antenna terminal | Connect oscilloscope and V.T.V.M. to load terminal | 1400KHz   | Trimmer capacitor (TC <sub>301</sub> )  | Maximum wave form |
| 7.   | Same as steps 5 and 6<br>Check 1,000 KHz as well and adjust so that there is not a remarkable difference in sensitivity between them |   |                  |  |   |   |                   |

# COLOR CODE

The color code indicates 10 different colors by the help of the figures of 1 to 9. This code agrees with IEC and JIS.

| Common to All Parts |            |            |            | Fixed Resistor | Mica Capacitor   |               |                    | Paper Capacitor   |                    | Ceramic Capacitor    |   |               |                    |  |  |  |
