PS-FL3C:

US Model

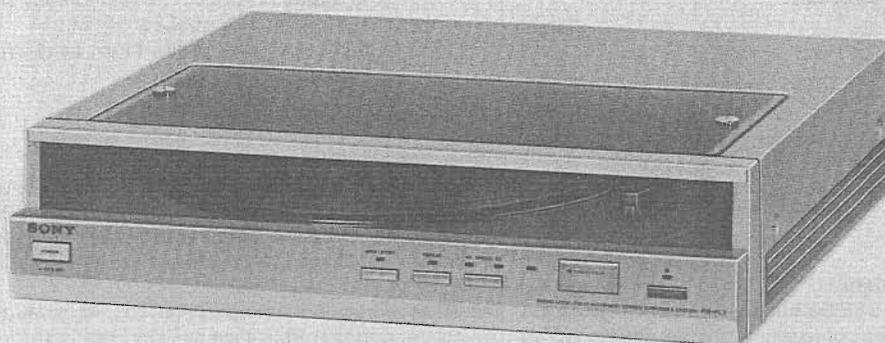

Photo: PS-FL3C

The PS-FL3 (US model) is not supplied with a cartridge, while the PS-FL3 (AEP, UK model) is supplied with a XL-20G cartridge and the PS-FL3C is supplied with a VL-5 cartridge.

STEREO TURNTABLE SYSTEM

SPECIFICATIONS

Turntable

Platter	30 cm (11 $\frac{7}{8}$ in.), aluminum-alloy diecast
Motor	Linear torque BSL (brushless and slotless) motor
Drive system	Direct drive
Control system	Magnedisc servo control system
Speed	33 $\frac{1}{3}$ rpm, 45 rpm
Starting characteristics	Comes to nominal speed within a half revolution (33 $\frac{1}{3}$ rpm)
Wow and flutter	0.02% (WRMS)*, 0.025% (WRMS) $\pm 0.04\%$ (DIN)
Signal-to-noise ratio	78 dB (DIN-B)
Automatic system	Lead-in, return, reject, repeat, record size selection

* This new measuring method concerns only the turntable assembly, including the platter. It excludes wow and flutter caused by the tonearm, the cartridge, or the record. Measured by obtaining signal from magnetic pickup head.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK  ON THE SCHEMATIC DIAGRAMS, EXPLODED VIEWS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

Tonearm

Type	Statically balanced
Pivot-to-stylus length	216.5 mm (8 $\frac{1}{2}$ in.)
Overall arm length	280 mm (11 $\frac{1}{8}$ in.)
Overhang	16.5 mm (2 $\frac{1}{32}$ in.)
Tracking error	+3°, -1°
Tracking force adjustment range	0-3.0 g
Cartridge shell weight	5 g
Cartridge weight range (including cartridge shell)	7.5-12.0 g

Cartridge VL-5 (supplied only with the PS-FL3C)

Type	Moving magnet type
Frequency response	10 Hz to 20 kHz
Channel separation	20 dB at 1 kHz
Output voltage	3.5 mV at 1 kHz, 5 cm/sec.
Load impedance	47 to 100 kilohms
Tracking force	1.5 to 2.5 g (2 g recommended)
Stylus	Sony ND-5G (conical 0.6 mil diamond)
Weight	5.0 g

— Continued on page 2 —

SONY®

SERVICE MANUAL

S-FL3/FL3C

Cartridge XL-20G (Supplied with AEP, UK model.)

Type	Moving magnet type
Frequency response	10 Hz to 30 kHz
Channel separation	25 dB at 1 kHz
Output voltage	3 mV at 1 kHz, 5 cm/sec.
Load impedance	50 to 100 kilohms
Tracking force	1.0 to 2.0 g (1.5 g recommended)
Stylus	Sony ND-200G
Weight	3.4 g

General

Power requirements	US model: 120 V ac, 60 Hz AEP model: 220 V ac, 50/60 Hz UK model: 240 V ac, 50/60 Hz
Power consumption	10 W
Dimensions	Approx. 430 × 110 × 390 mm (w/h/d) (17 × 4 ³ / ₈ × 15 ³ / ₈ in.) including projecting parts and controls
Weight	Approx. 10.2 kg (22 lbs 8 oz), net Approx. 12.1 kg (26 lbs 11 oz), in shipping carton

FEATURES

Unique modular turntable system

When you touch the OPEN/CLOSE button the turntable module will smoothly slide out. Other audio components can be positioned on top of the turntable cabinet.

A microprocessor controls three motors

The movement of the turntable, the tonearm and the turntable module is controlled by a microprocessor. When you press the START/STOP button, the module will close, the turntable will rotate and the tonearm will lower onto the record.

Fully automatic system

With the module closed, automatic record play, repeat and stylus up/down are operated by the "feather-touch" function button on the front panel. The record size is automatically set by a photo sensor system. If no record is on the turntable the tonearm will not descend but will automatically return to the arm rest. A muting system activates when the tonearm is lifted and deactivates after the tonearm lowers onto a record so there is no need to turn the amplifier volume down every time a stylus is placed on a record.

Linear torque BSL motor

Direct drive system with Sony's unique BSL (brushless and slotless) motor which has an extremely low noise level, and whose smoothness virtually eliminates wow and flutter. Its high torque assures a quick start to 33¹/₃ rpm after only a half revolution.

Wireless remote control operation (US, FL3C model)

Using the optional RM-44 system remote controller, various operations—power on/off, start/stop of record play and tonearm up/down—can be remotely controlled.

Tonearm return mechanism triggered by optical sensor

An optical sensor detects the record return point. No mechanical pressure is applied to the stylus so the tonearm can use a very light tracking force.

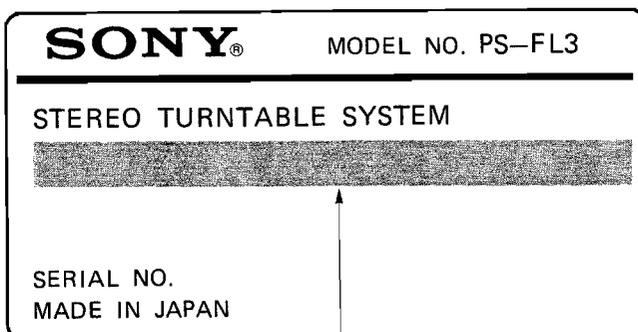

Synchronized operation with the Sony cassette decks

When the tonearm lowers to the lead-in groove of a record, the cassette deck stand-by mode is released and the record mode assumed.

When play finishes, the cassette deck is automatically set first in the record muting mode, then in the pause mode. This synchronized operation is possible with Sony cassette decks equipped with a four-pin remote control jack which is connected with a Sony RM-65 synchro remote control unit.

MODEL IDENTIFICATION

Specification Label

US model:	AC 120V	60Hz	10W
AEP model:	AC 220V	~ 50/60Hz	10W
UK model:	AC 240V	~ 50/60Hz	10W

LOCATION AND FUNCTION OF CONTROLS

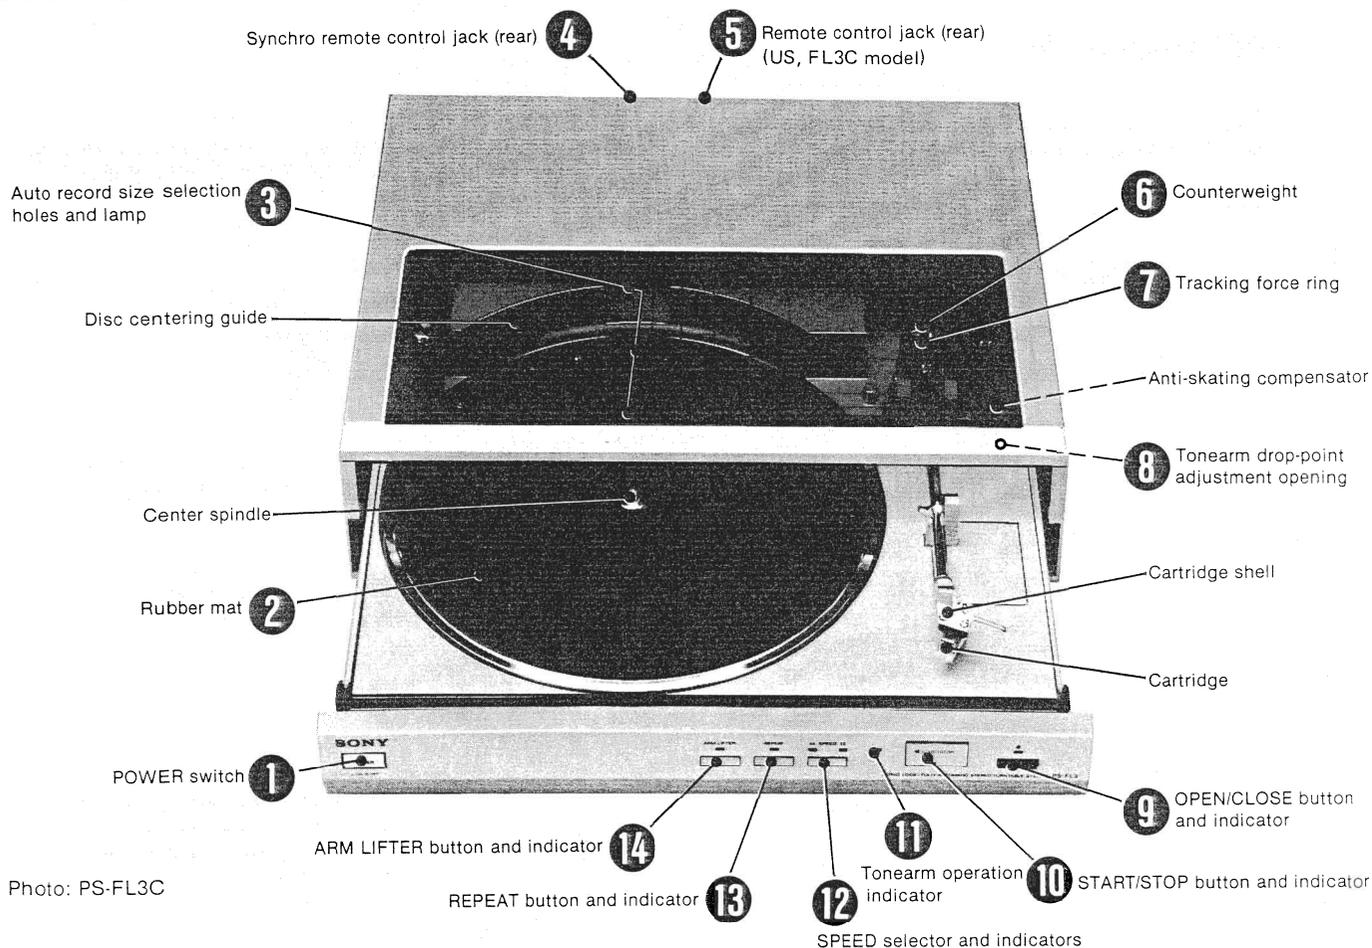

Photo: PS-FL3C

❶ POWER switch

Press to turn on the turntable. To turn the turntable off, press it again.

❷ Rubber mat

Place the rubber mat so that the holes for auto record size selection on the rubber mat and on the platter are matched correctly.

❸ Auto record size selection holes and lamp

Record size is automatically selected by a beam transmitted from a lamp through holes on the rubber mat and the platter to the photo detectors underneath the platter. When no record is on the platter, the tonearm will not lower onto the turntable.

❹ Synchro remote control jack (rear)

Connect the optional RM-65 synchro remote control unit to this jack. (See page 13.)

❺ Remote control jack (rear) . . . (US, FL3C model)

Connect the optional RM-44 system remote controller to this jack. (See page 14.)

❻ Counterweight

Balance the tonearm and apply the required tracking force by adjusting the counterweight. (See page 6.)

❼ Tracking force ring

The tracking force scale is engraved on this ring in 0.1 gram increments.

❽ Tonearm drop-point adjustment opening

Turn the screw in this opening to adjust the auto play tonearm drop-point. (See page 14.)

❾ OPEN/CLOSE button and indicator

With one touch of this button the turntable module automatically opens for loading a disc. With the another touch the module automatically closes.

❿ START/STOP button and indicator

Press to start the record playing. To stop during play, press it again.

⓫ Tonearm operation indicator

The indicator flickers indicating that the tonearm is moving for auto operation. The indicator goes out when the tonearm rests on a record or returns to the arm rest.

⓬ SPEED selector and indicators

Selects the record speed. The indicator of the selected speed illuminates. When the POWER switch is turned on, the speed is always 33 $\frac{1}{3}$ rpm unless the selector is pressed to select 45 rpm.

⓭ REPEAT button and indicator

Press this button to repeat play. The indicator illuminates and repeat play continues until this button is pressed again to stop it. If the START/STOP button is pressed during repeat play, the tonearm returns to the arm rest and the turntable stops rotating.

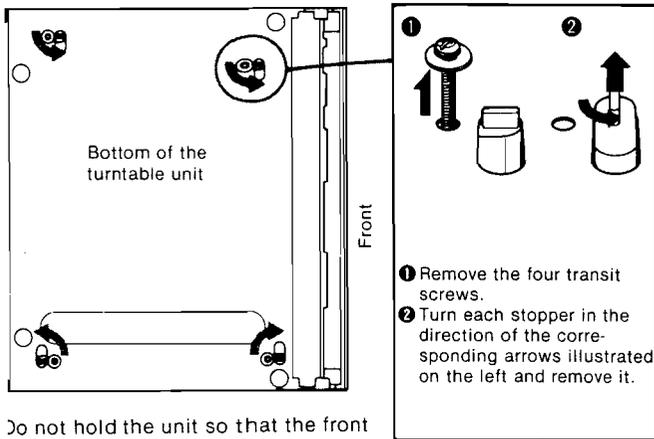

⓮ ARM LIFTER button and indicator

This button lifts and lowers the tonearm. When the tonearm is lowered, the turntable starts rotating. The indicator illuminates when the tonearm is in the up position.

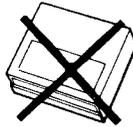

5-FL3/FL3C

TURNTABLE ASSEMBLY

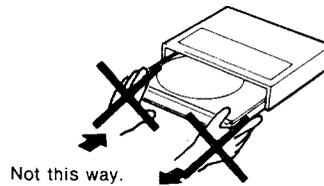

1 Remove the transit screws. Save these screws and stoppers, since they will be required when repacking.

Do not hold the unit so that the front panel faces down after you have removed the transit screws, since this may cause serious damage to the module.

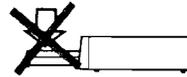

The OPEN/CLOSE button does not activate when the turntable is turned off. Never push or pull the module forcibly.

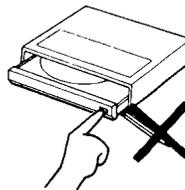

Do not push down on the module.

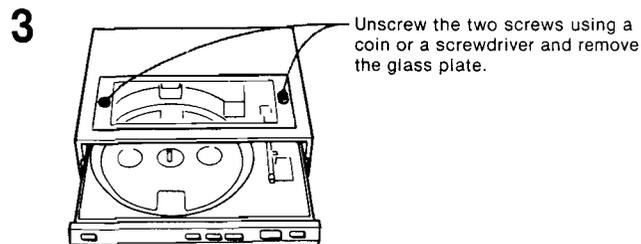

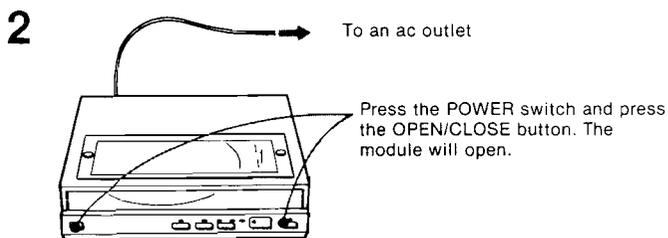

Do not stop the module when it is moving.

Be careful that no foreign object is caught between the module and the cabinet.

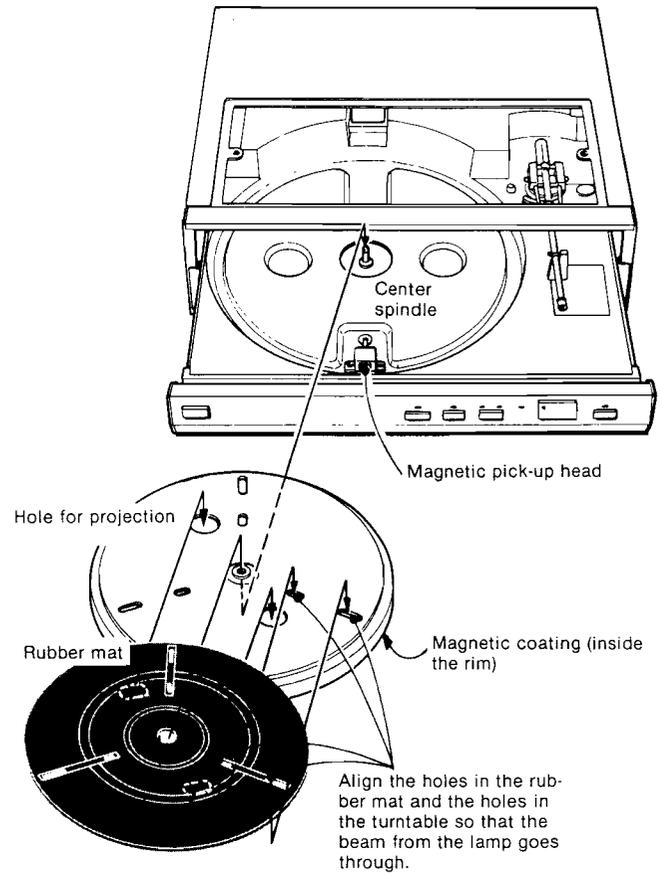

Remove all packing material and wipe off the cabinet. Save the packing box and materials for possible future use.

4 Carefully place the platter on the motor board by fitting the center hole over the center spindle. Be careful that no foreign objects lodge under the platter.
 ● Do not touch the magnetic coating or the magnetic pick-up head.

5 Place the rubber mat on the platter, by matching the projections on the back of the rubber mat to the holes on the platter, and also the holes for record size selection on the rubber mat to those on the platter.
 Do not use a rubber mat other than the one supplied.

CARTRIDGE INSTALLATION

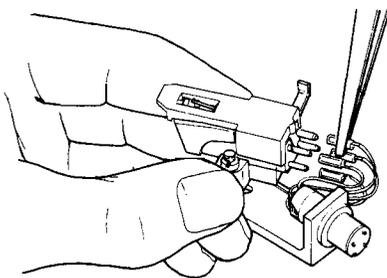

Notice on the PS-FL3C

The supplied cartridge has been installed correctly on the cartridge shell at the factory. So the following procedures should be skipped unless you replace the cartridge.

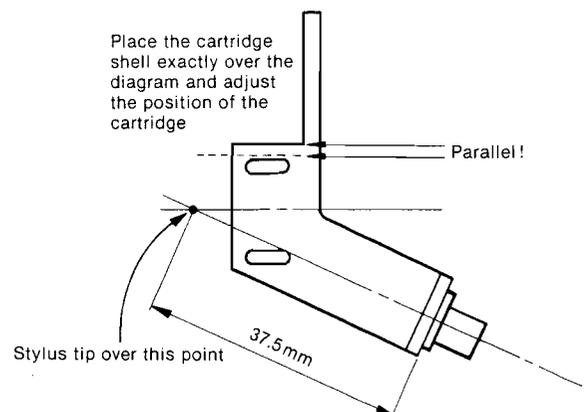

A cartridge weighing from 2.5 to 7 g can be mounted on the supplied cartridge shell (5 g).

1 Connect the lead wires of the shell to the corresponding pins on the cartridge.

Wires	Cartridge pins
White	White, L (Left channel signal)
Blue	Blue, LE or G (Left channel ground)
Red	Red, R (Right channel signal)
Green	Green, RE or G (Right channel ground)

2 Temporarily install the new cartridge into the shell with the mounting screws. Final adjustment should be made later during the overhang check.

S-FL3/FL3C

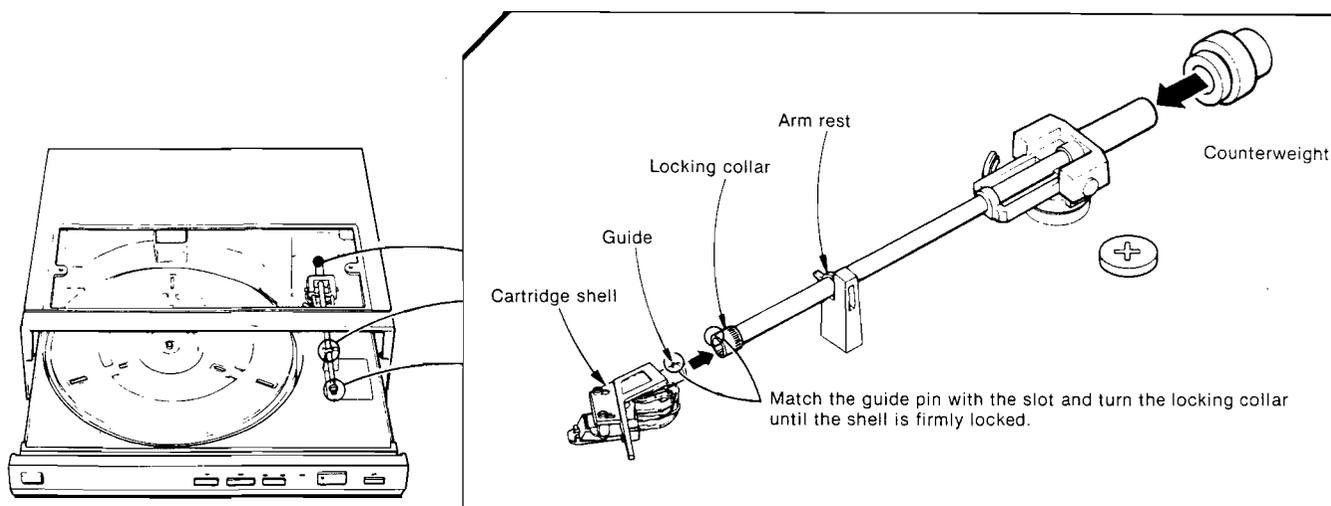

TONEARM ADJUSTMENT

The turntable must be on a level surface while the tonearm is being adjusted. Be careful not to damage the stylus tip while making adjustments.

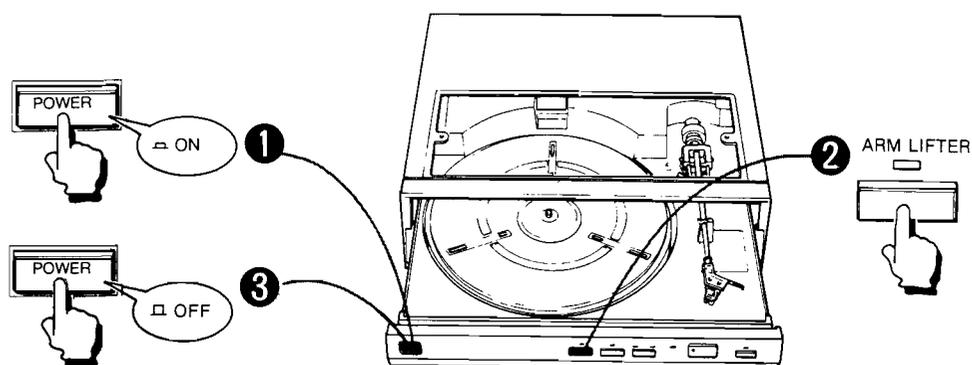

TONEARM BALANCE ADJUSTMENT

It is critically important for good sound reproduction that the stylus traces the record groove accurately and with the proper tracking force. To do this, the tonearm must first be balanced so that the proper tracking force can be applied. To balance the tonearm, proceed as follows:

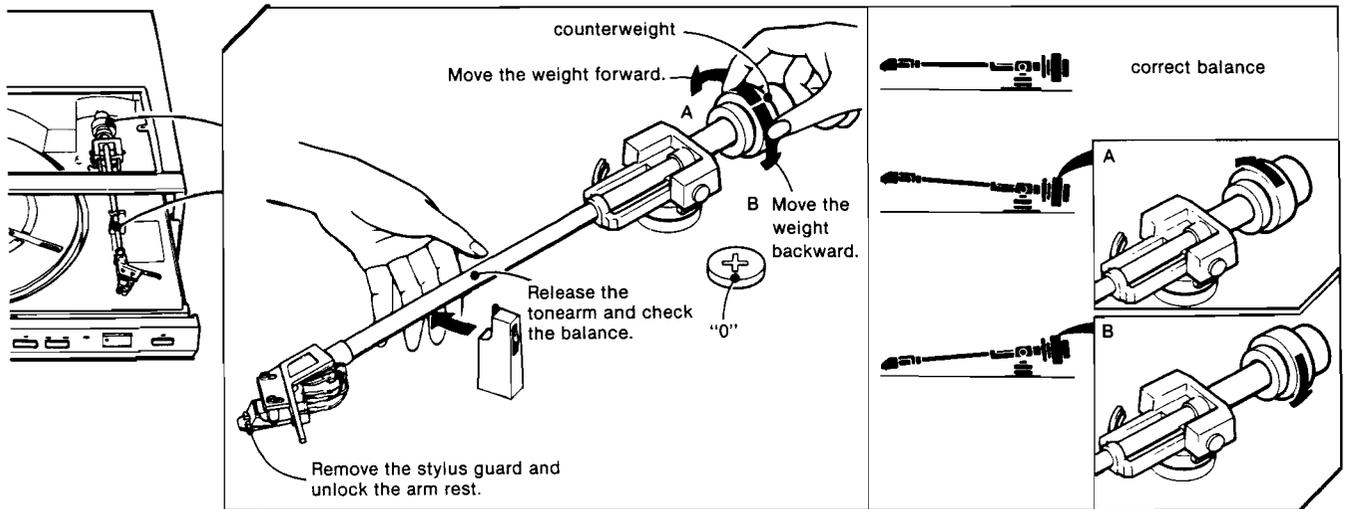

- 1 Secure the tonearm to the arm rest and insert the counterweight and the cartridge shell.

- 2 Press the POWER switch, then the ARM LIFTER button. This will cause the turntable to rotate and the cueing platform to lower. After the cueing platform has lowered, press the POWER switch again to turn the unit off, and stop the turntable by hand.

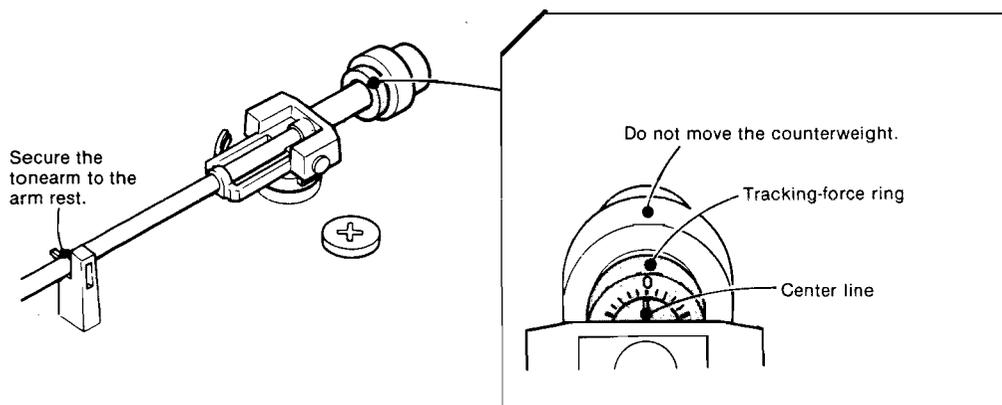

- 3** Set the anti-skating compensator to "0" and adjust the position of the counterweight by turning it.

Repeat this step until the arm balances.

- 4** After the tonearm has been balanced, replace the stylus guard and secure the tonearm to its rest.

- 5** While making sure that the counterweight remains in the balanced position, carefully turn the tracking force ring until the "0" indication is aligned with the center line on the tonearm.

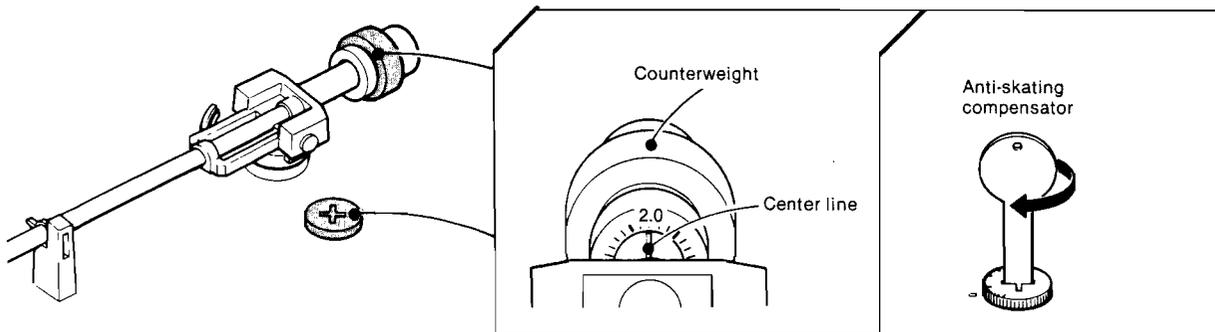

S-FL3/FL3C

TRACKING FORCE*1 ADJUSTMENT

Turn the counterweight as illustrated so that the recommended tracking force for your cartridge is aligned with the center line on the tonearm. The maximum tracking force available is 3.0 grams.

ANTI-SKATING*2 COMPENSATION

Turn the anti-skating compensator so that the guide mark is aligned with the selected tracking force value.

OVERHANG CHECK*3

Check that the cartridge is correctly installed, using the alignment gauge on the underside of the rubber mat. If the installation is incorrect, the tonearm drop-point during auto play will be incorrect.

- 1 Place the rubber mat upside down.
- 2 Turn the power on and press the ARM LIFTER button. After the loading platform has lowered, press the POWER button again to stop the turntable.
- 3 Bring the tonearm over the point where the two fine lines cross and carefully lower the stylus to this point.
- 4 Check to see that the head shell is parallel to the lines marked on the rubber mat. If it is not, loosen the cartridge mounting screws and slide the cartridge to the required position. Tighten the screws and recheck the balance and tracking-force.

After the tonearm adjustment

When the tonearm adjustment is completed, replace the glass plate and secure it with the screws.

*1 Tracking force

Tracking force is the vertical force applied to the stylus tip so that it can accurately trace a record groove.

The tracking force is applied after the tonearm is balanced.

Since the proper tracking force differs depending on which cartridge is installed, be sure to apply the tracking force recommended for your cartridge. If the tracking force is too light, the stylus will skip grooves. When it is too heavy, the stylus tip and the record will wear excessively. Note that if you play a record at a temperature below 10°C (50°F), or if the record to be played is badly warped, the tracking force should be increased by 20%.

*2 Anti-skating compensator

While the record is being played, friction between the record groove and the stylus produces a force that tends to drive the tonearm toward the center of the record.

The anti-skating compensator cancels this force. The anti-skating force should be the same value as the tracking force.

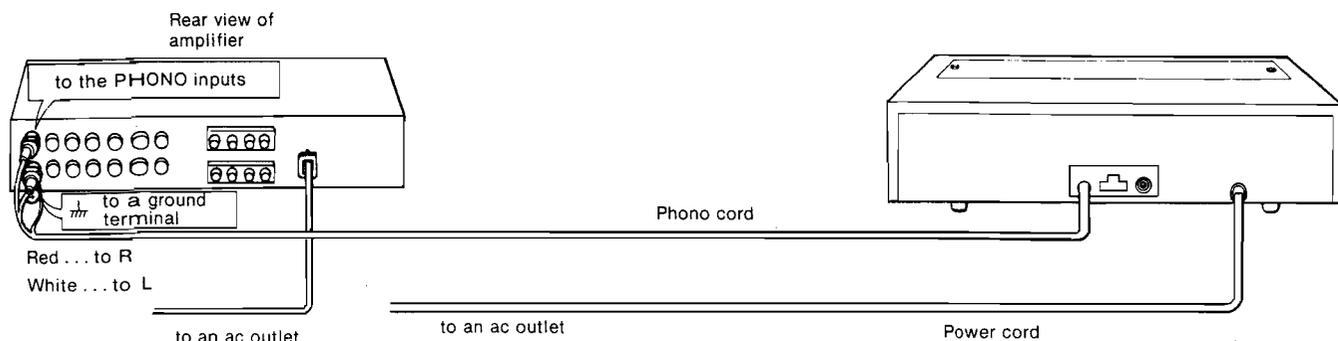

Incorrect adjustment of the anti-skating compensator results in sound distortion and uneven wear on both the stylus and the record.

*3 Overhang

While record grooves are cut by a head which tracks a record's radius in a line, a tonearm, because it is pivoted, traces an arc on a record. To compensate for this difference in movement, the head shell is angled and the cartridge is installed with a 16.5mm overhang. The correct overhang is obtained by installing the cartridge with a 37.5mm space between the stylus tip and the end of the cartridge shell and by checking the installation with the alignment gauge.

CONNECTIONS

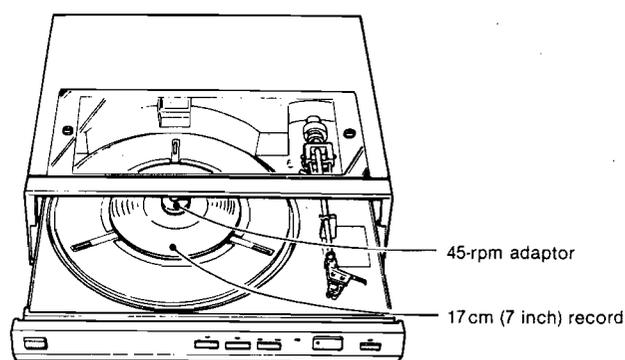

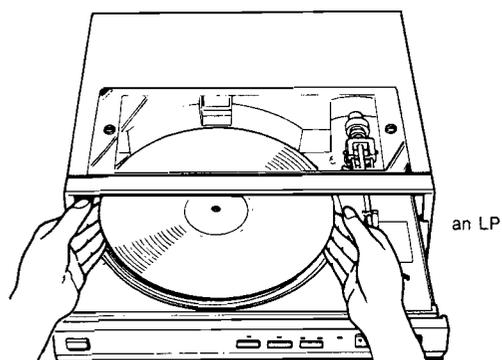

- Turn off the amplifier before making connections.
 - Be sure to insert the cable connectors firmly into the jacks.
- Loose connections may cause hum and noise.
- Leave a little slack in the connecting cord to allow for inadvertent shock or vibration.

RECORD PLAYING

PREPARATION

- Place a record on the platter. For 17 cm (7 inch) records, put the supplied 45-rpm adaptor over the center spindle.
- Unlock the arm rest latch during operation. After playing, secure the tonearm to the arm rest.

Record

With transparent or badly warped records, the auto record size selection does not operate. In this case, play a record in the following way:

- For 30 cm (12 inch) records, cover the holes for auto record size selection by turning the rubber mat half a circle and play a record.
- For 17 cm (7 inch) records, place the supplied sheet underneath a record to cover the holes and play a record.

-FL3/FL3C

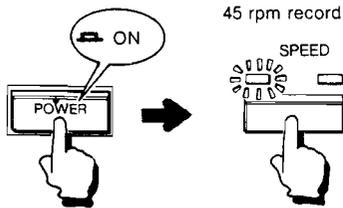

HOW TO PLAY

Note

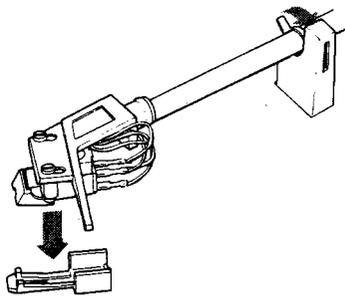

- 25 cm (10 inch) records can't be played automatically. To play these records, bring the tonearm onto a record and then start the playing, following the instructions in "Manual play" on the next page.

- ① Press the POWER switch (ON).

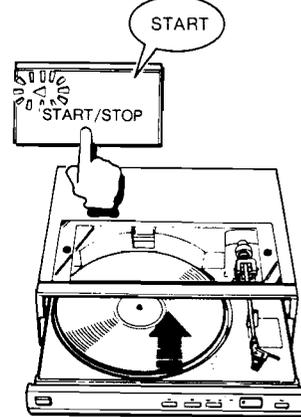

Select the correct record speed. The record speed will always be 33 $\frac{1}{3}$ rpm unless the SPEED selector is pressed to select 45 rpm.

- ② Remove the stylus guard and unlock the arm rest.

- ③ Press the START/STOP button. Play will begin.

When the tonearm reaches the end of the record, it will automatically return to the arm rest and the turntable will stop.

Notes

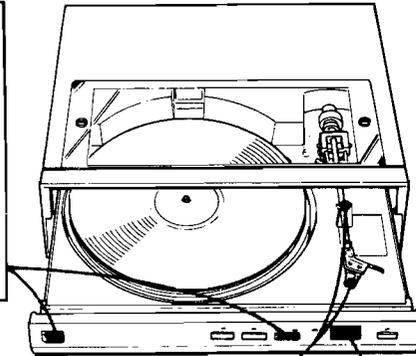

Turn off the turntable after the tonearm returns to the arm rest. If the turntable is turned off while the tonearm is returning to the arm rest, when you press the START/STOP button the next time the tonearm will return to the arm rest and the record will not be played. If this happens, press the START/STOP button again. If the turntable rotates at an abnormal speed for some time, such as might happen if you slow it by hand or apply a record cleaner, the safety mechanism may activate to return the tonearm to the arm rest.

MANUAL PLAY—for playing records at any point

1 Press the POWER switch (ON).
45 rpm record

The diagram shows a hand pressing a switch labeled 'POWER' with a speech bubble saying 'ON'. An arrow points to a hand pressing a selector labeled 'SPEED' with a speech bubble saying '45 rpm record'.

The record speed will always be 33 $\frac{1}{3}$ rpm unless the SPEED selector is pressed to select 45 rpm.

2 Bring the tonearm to the desired position over the record.
Remove the stylus guard and unlock the arm rest.

The diagram shows the tonearm being moved over the record. Below it, the stylus guard is shown being removed from the tonearm. A hand is shown unlocking the arm rest on the turntable.

3 Press the START/STOP button.

The diagram shows a hand pressing a button labeled 'START/STOP' with a speech bubble saying 'START'.

The module will close, the tonearm will lower to the record and play will begin.
When the tonearm reaches the end of the record, it will automatically return to the arm rest and the turntable will stop.

3 To play with the module opened, press the ARM LIFTER button.

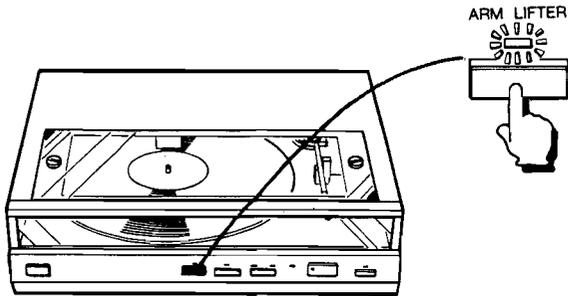

The diagram shows a hand pressing a button labeled 'ARM LIFTER'.

In this case, auto return and repeat may not activate at the end of the groove. Press the START/STOP button to return the tonearm to the arm rest.

Note
If you lower the tonearm too near the record label, the auto return mechanism may not activate at the end of the groove. This is because the tonearm reaches the end of the record before the auto return detector can activate.

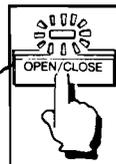

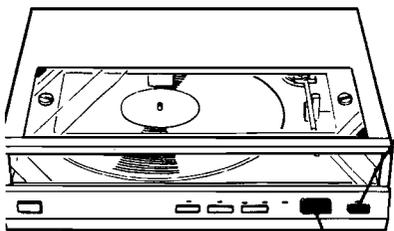

S-FL3/FL3C

0 LIFT UP THE STYLUS DURING PLAY

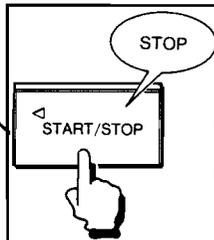

To lift the stylus from a record for a moment and then start playing from the same point, press the ARM LIFTER button. To lower the tonearm onto the record, press the button again.

1 STOP DURING PLAY

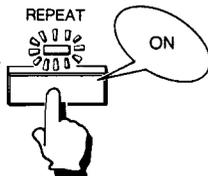

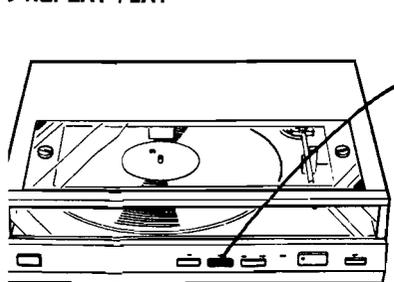

Press the OPEN/CLOSE button. The tonearm will return to the arm rest, the turntable will stop rotating and the module will open. (When the module has opened, a touch of this button will close the module.)

or

Press the START/STOP button. The tonearm will lift up and automatically return to the arm rest. The cueing platform will lower when the tonearm reaches the arm rest and the unit will be turned off.

2 REPEAT PLAY

Press the REPEAT button after starting play. The tonearm continues repeat play unless the button is pressed again to turn off the repeat function. To stop during repeat play, press the START/STOP button.

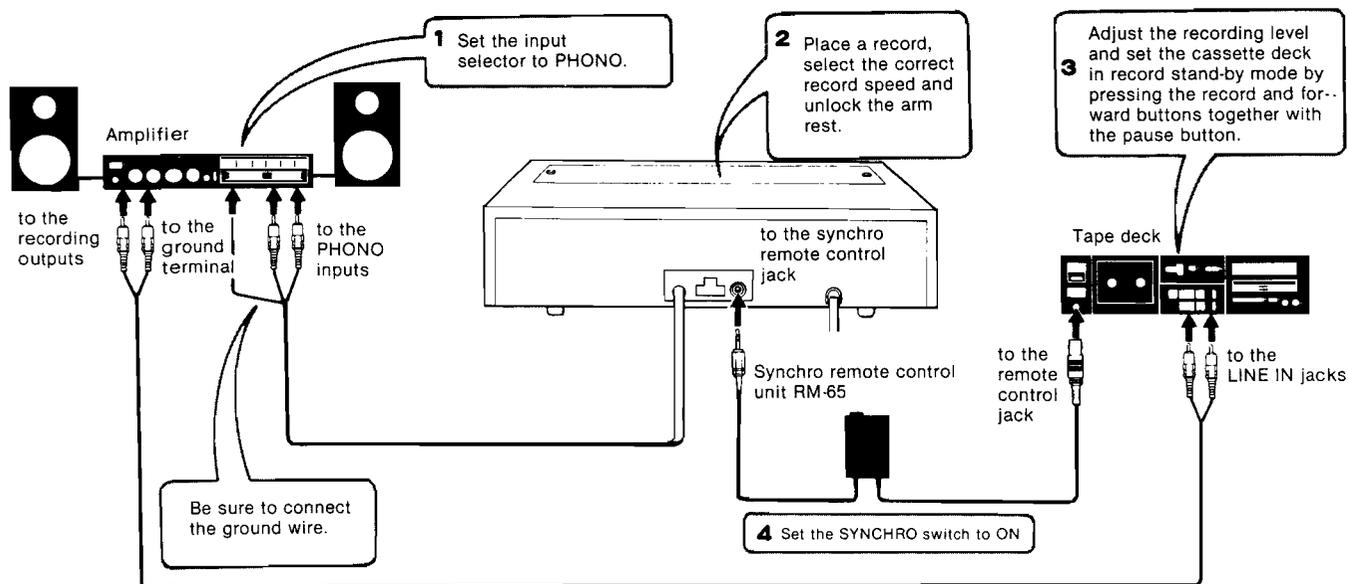

SYNCHRONIZED PLAY OF THE TURNTABLE AND A CASSETTE DECK

Record recording starts only when the START/STOP button is pressed. When the tonearm lowers onto the record, the tape deck goes into the record mode and, when the tonearm is lifted up, the deck goes into auto record muting mode for four seconds, then into the pause mode.

Connection and operation are as follows:

Cassette decks which can be used with your turntable for this special synchronized operation are those Sony models which are equipped with a 4-pin remote control jack. An RM-65 synchro remote control unit (optional) is required to connect the turntable and the cassette deck.

Connection and preparation

After turning the power of the turntable system on, set the SYNCHRO switch to ON and before turning the power of the turntable system off, set the SYNCHRO switch to OFF.

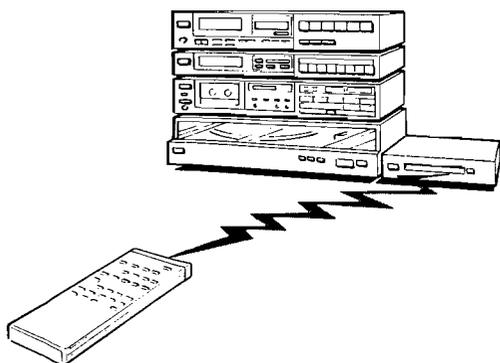

RECORDING

Desired action	Turntable operation	Synchronized operation of the cassette deck
To record from the beginning of a record...	Press the START/STOP button.	When the tonearm lowers onto the record, the pause mode is released and recording begins.
To record from a point some way into the record...	Bring the tonearm over the desired point and press the START/STOP button.	When the tonearm lowers onto the record, the pause mode is released and recording begins.
To stop recording during record play...	Press the START/STOP button.	When the tonearm is lifted up, auto record muting activates for four seconds, then the pause mode is assumed.
When record play ends...	The tonearm returns automatically to the arm rest.	When the tonearm is lifted up, auto record muting activates for four seconds, then the pause mode is assumed.

S-FL3/FL3C

REMOTE CONTROL OPERATION WITH AN OPTIONAL REMOTE CONTROLLER (US, FL3C MODEL)

The optional RM-44 system remote controller controls the following functions of the turntable; power on/off, start/stop of record play, tonearm up/down, and synchronized operation with Sony cassette decks using the optional RM-65 synchro remote control unit. This remote controller, with its infrared ray sensor, can control connected components by a infrared ray transmitted from the RM-44C remote commander supplied with the system remote controller. For connections and operations, refer to the system remote controller's instruction manual.

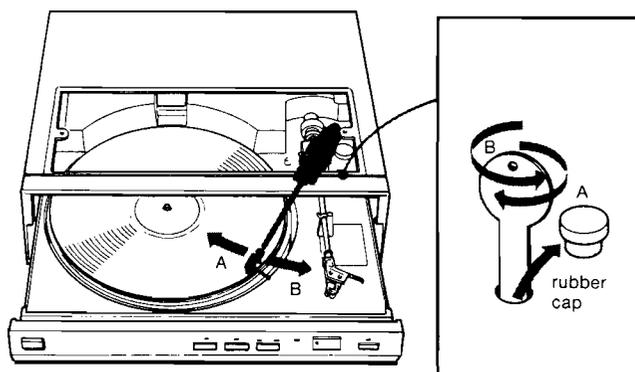

TIPS ON RECORD HANDLING

- Before playing, clean the record with a record cleaner or soft cloth. If a spray cleaner is used, make sure that it has dried completely before playing the record. Playing the record before the cleaner has dried may damage the record.
- It is a good idea to clean the record again before putting it away.
- Handle a record by its edges and do not touch the grooves. Fingerprints on the record surface may encourage an accumulation of dust, resulting in impaired tone.
- Use a commercially available anti-static spray to neutralize the static electricity on a record.
- Avoid exposing a record to direct sunlight or sources of heat, such as a hot-air duct.
- Store your records vertically. They should not be compressed.

TO NEARM DROP-POINT ADJUSTMENT

The tonearm's drop-point during auto play has been adjusted at the factory. If this needs to be readjusted, proceed as follows.

- ① Press the OPEN/CLOSE button to open the module. Then unscrew the two screws and remove the glass plate.
- ② Remove the rubber cap over the tonearm drop-point adjustment opening located at the right side of the arm base.
- ③ Insert the supplied drop-point adjustment key into the opening. To move the drop-point inward . . . turn the screw in direction A. To move the drop-point outward . . . turn the screw in direction B.
- Be sure not to turn the screw in direction B so far that the stylus tip cannot make contact with the record.
- ④ Start auto play and check that the stylus lowers at the correct drop-point.
- If the drop-point is correct for 30 cm (12 inch) records, it will also be correct for 17 cm (7 inch) records.
- You can keep the adjustment key in your key holder if you like. It may come in handy for a variety of jobs.

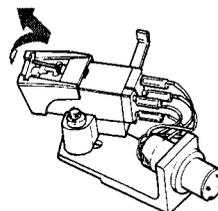

REPLACING THE STYLUS

The stylus will lose its effectiveness and begin to damage records after about 400 hours of use.

For the VL-5 cartridge (supplied with the PS-FL3C), an ND-5G replacement stylus is available at your Sony dealer. Handle the stylus carefully as it is very delicate.

Install the replacement stylus as follows.

- ① Secure the tonearm to the arm rest and separate the shell from the tonearm by turning the locking collar.
- ② Detach the stylus assembly by grasping it between the thumb and forefinger and pulling gently in the direction of the arrow.

- ③ Insert the new stylus into the cartridge.
- ④ Plug the cartridge shell into the tonearm and turn the locking collar counterclockwise until the shell is locked.

TROUBLE CHECKS

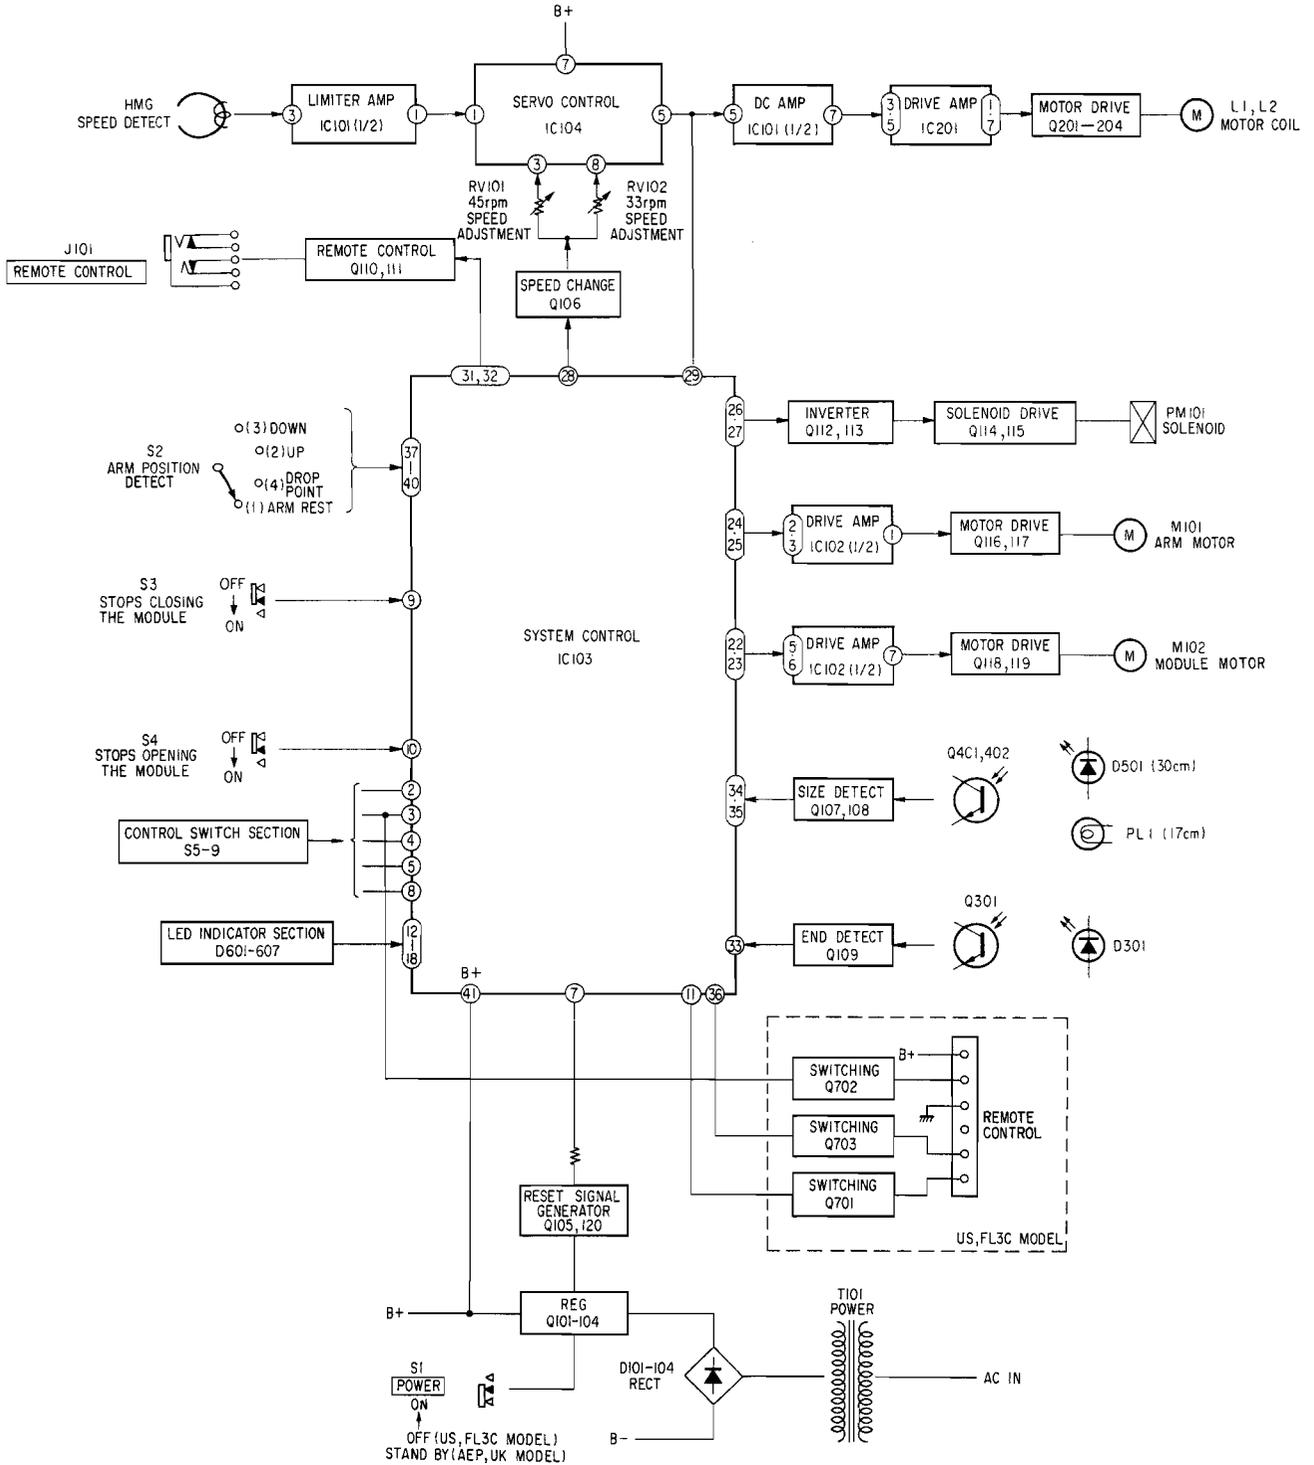

The following trouble checks will help you correct most common problems encountered with a turntable system. Should any problem persist after you have made these checks, consult your nearest Sony service facility.

Before proceeding with these trouble checks, first refer to the connections and the operating procedures on page 9.

TROUBLES	CAUSES	WHAT TO DO
The tonearm does not lower on the record but returns to the arm rest.	Transparent record	For 30 cm (12 in) records, reposition the rubber mat by turning half a circle. For 17 cm (7 in) records, place the supplied sheet underneath a record.
The play does not start when the START/STOP button is depressed.	Arm rest is locked.	Unlock the arm rest latch.
The tonearm always lowers on the point for 30 cm records.	A rubber mat other than the one supplied being used.	Use the supplied rubber mat.
	Incorrect placement of the supplied rubber mat	Align the holes in the rubber mat with the holes of the platter.
Impaired tone quality	Improper tonearm balance or tracking-force	Adjust the tonearm, referring to page 6.
	Dusty stylus	Clean the stylus with a soft brush from back to front.
	Worn stylus	The stylus life is approx. 400 hours. Replace with a new stylus.
Auto return does not operate at the end of play.	A record with shallow return grooves being played by a cartridge with low tracking force	Apply more tracking-force.
No audio from one channel	Loose connection of phono cord	Connect the cord firmly.
Steady low-pitched humming sound	Loose attachment of the cartridge shell to the tonearm	Fix the shell to the tonearm firmly.
	Ground wire is not connected to the amplifier.	Connect the ground wire to the amplifier.
Groove skipping ; tonearm skating ; tonearm not advancing.	Improper tracking force	Apply proper tracking-force. (See page 8.)
	Turntable not level	Place the turntable on a level surface.
	Defective record	
Loud rumble or low-frequency howl*	The turntable is subjected to external vibration.	Place the turntable on a solid surface free from external vibration.
	The turntable is placed too near the speaker.	Locate the turntable as far away from the speaker as possible.

* This is called "acoustic feedback" and is caused when vibrations from the speakers are transmitted through the air or via solid objects (such as the shelves, the cabinet, the floor, etc.) to the turntable, where they are picked up by the stylus, amplified and reproduced through the speakers once again.

**SECTION 1
BLOCK DIAGRAM**

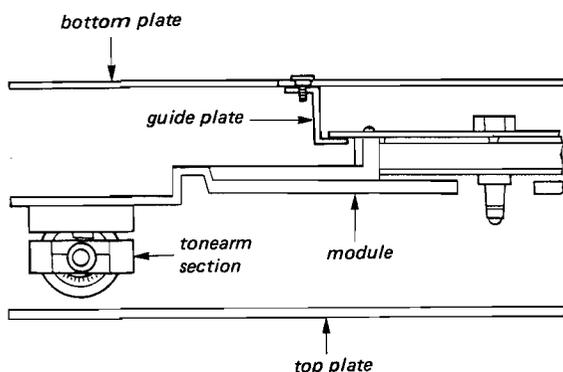

SECTION 2 DISASSEMBLY

Note: Follow the disassembly procedure in the numerical order given.

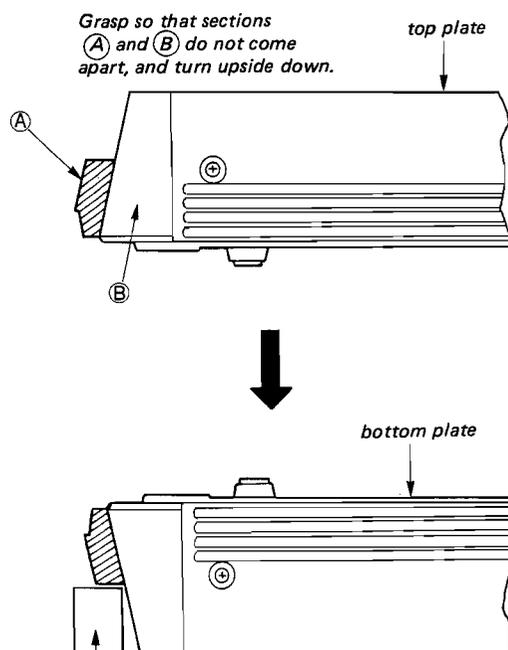

2-1. NOTE ON TURNING SET UPSIDE DOWN

1. Remove the turntable.
2. Lock the arm in the arm rest.
3. If the set is turned over carelessly, the tonearm may bend. Proceed as follows:
 - 1) With the bottom plate attached, the module is supported by the guide plate, as shown in the figure below.

- 2) If the bottom plate is removed at this point, the module will drop. So, the weight of the front of the module will fall on the tonearm cartridge section and bend the tonearm.

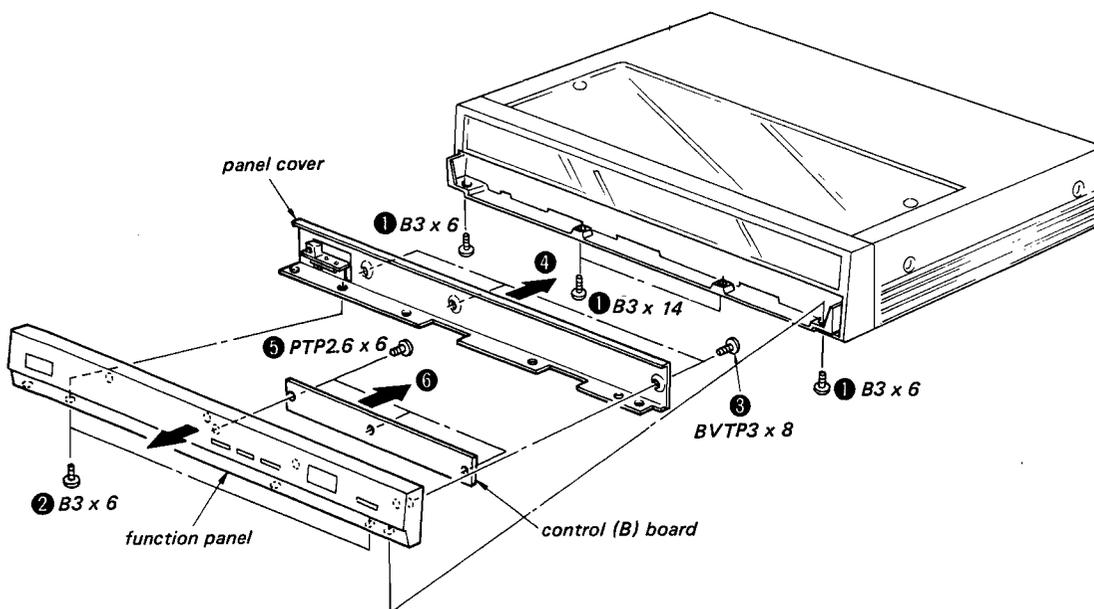

- 3) In order to prevent this, proceed as shown below.

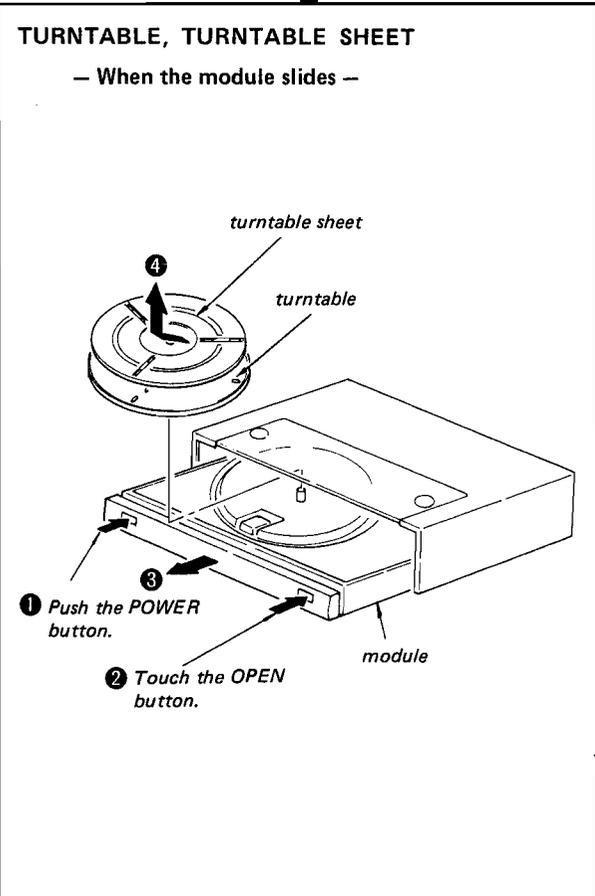

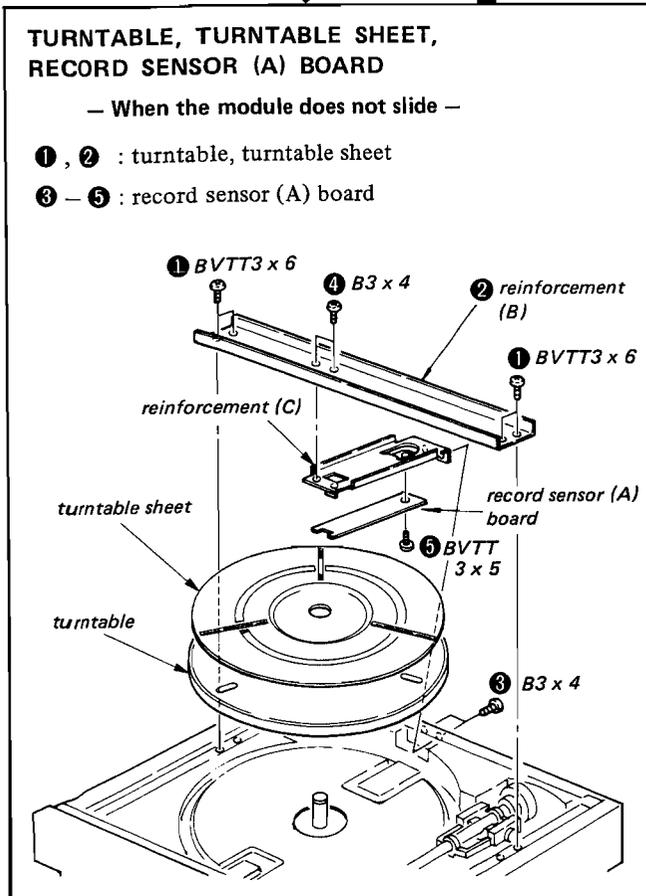

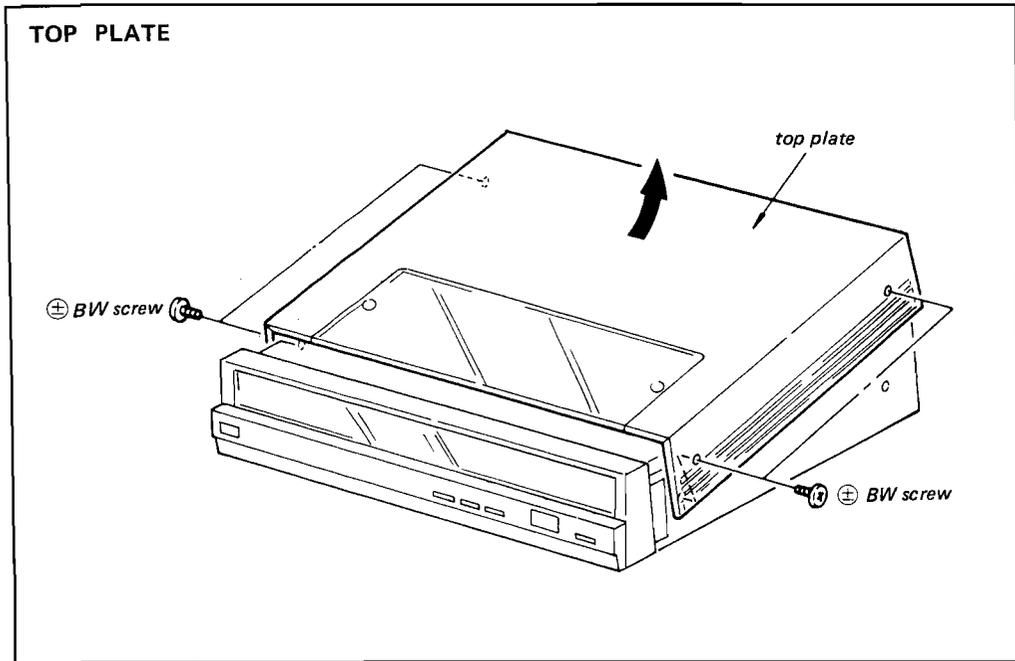

Position a support to prevent the set from falling over.

2-2. REMOVAL

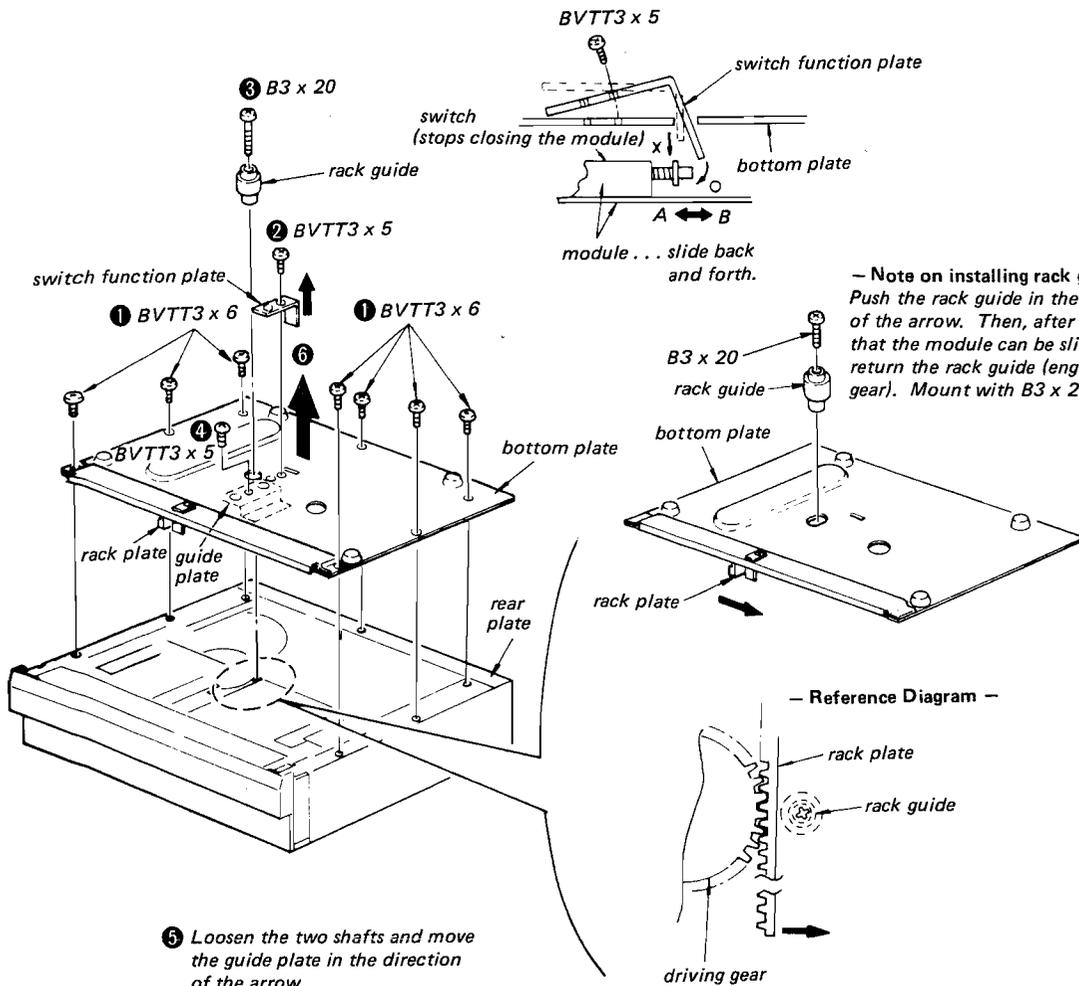

FUNCTION PANEL, CONTROL (B) BOARD

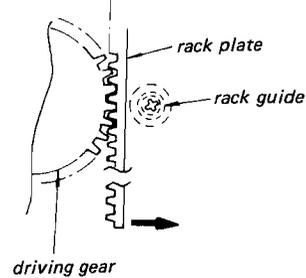

BOTTOM PLATE

— Note on installing switch function plate —
Install so that the switch on the module moves in the direction of arrow B and touches the switch function plate.

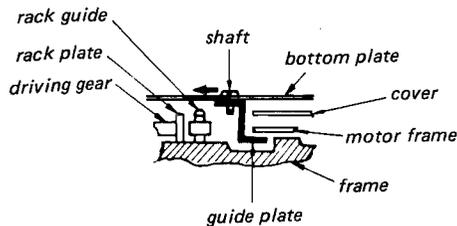

— Note on installing rack guide —
Push the rack guide in the direction of the arrow. Then, after confirming that the module can be slide by hand, return the rack guide (engage with gear). Mount with B3 x 20 screw.

— Reference Diagram —

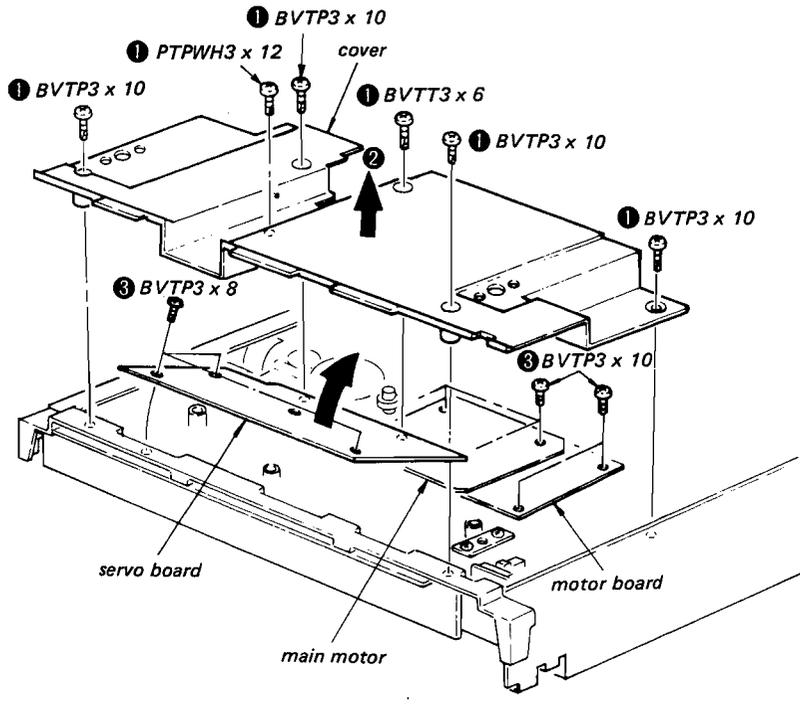

5 Loosen the two shafts and move the guide plate in the direction of the arrow. (When mounting, return the guide plate to the position shown and tighten the shafts.)

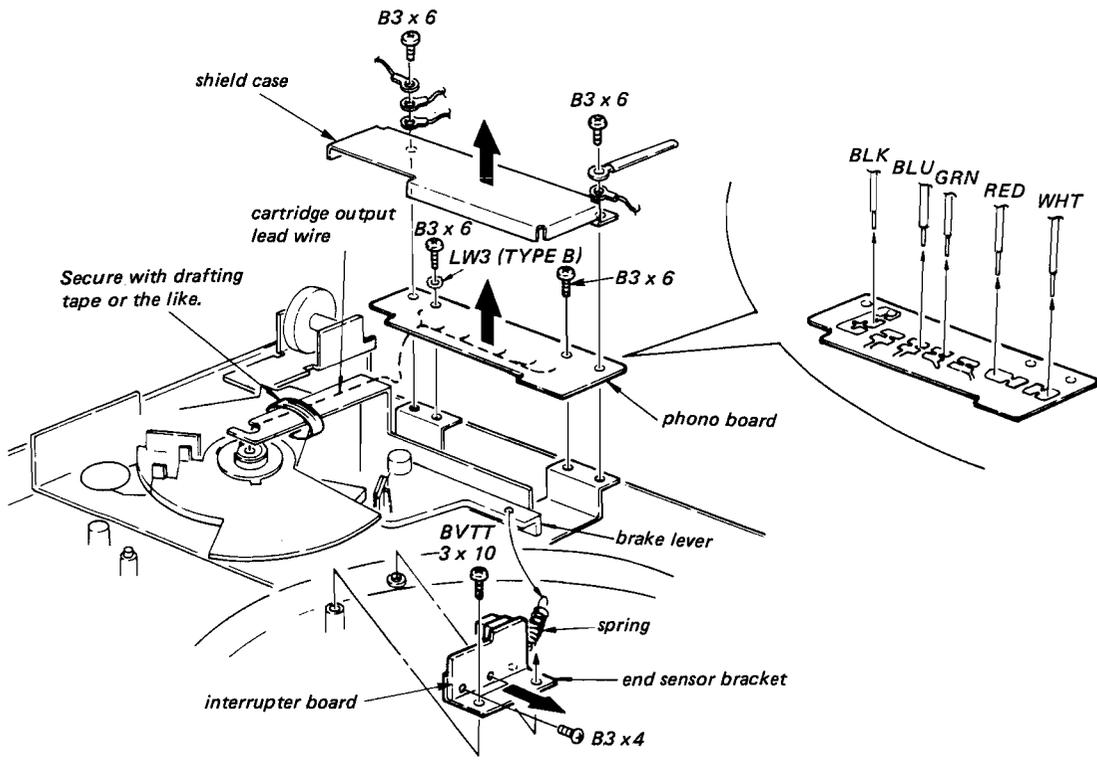

Notes on Installing Bottom Plate

When the module is pushed in and out by hand, confirm that the leads near the power transformer on the rear plate do not touch the module, then mount the bottom plate. If the bottom plate is mounted when the leads are touching the module, they may be damaged, causing AC power voltage to flow in the chassis. This may result in electrical shock, so be very careful.

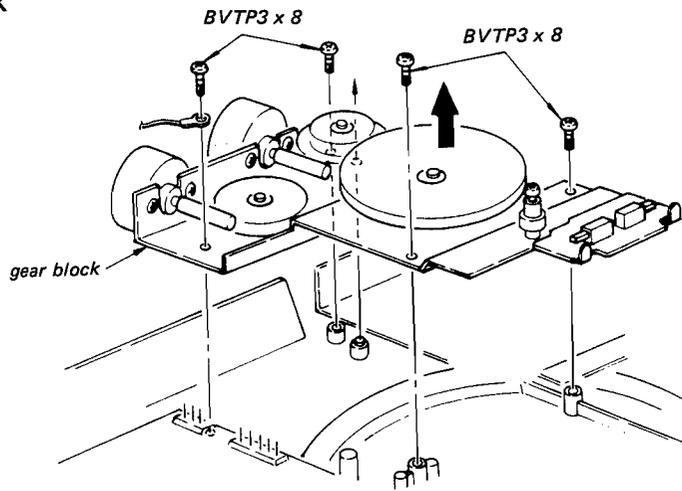

MAIN MOTOR, MOTOR BOARD, SERVO BOARD

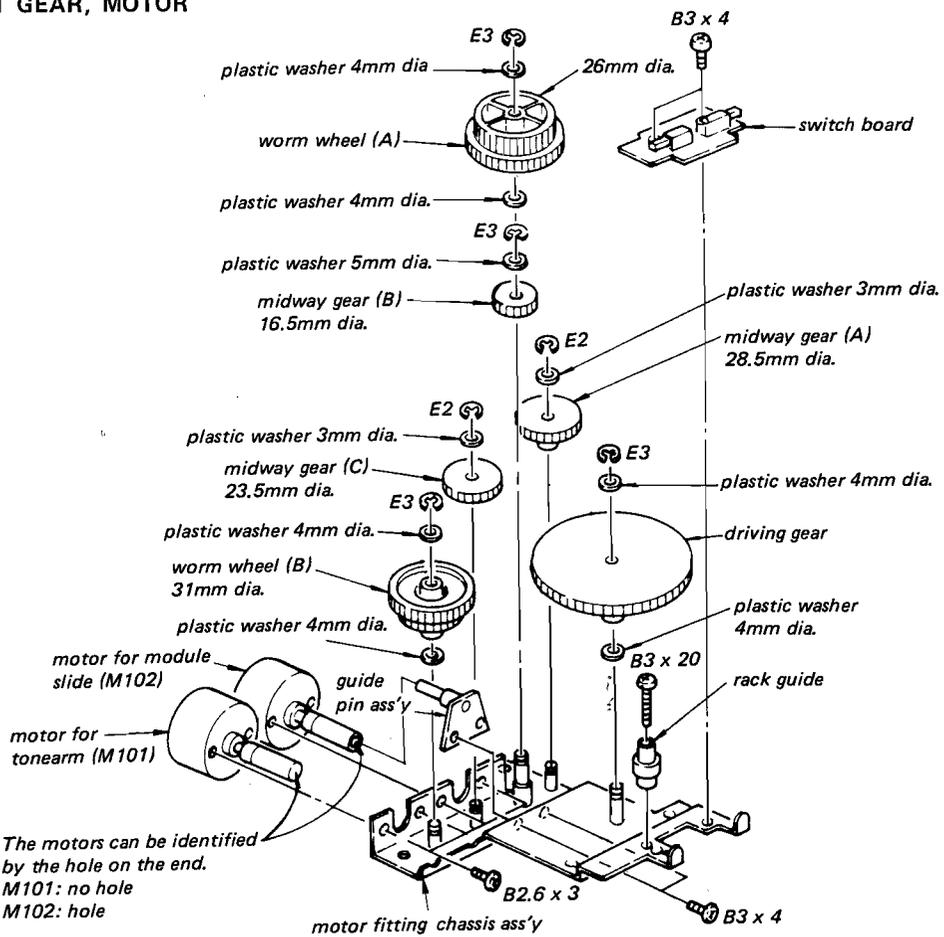

PHONO BOARD, INTERRUPTER BOARD

GEAR BLOCK

EACH GEAR, MOTOR

Note: Refer to the maximum diameter for each gear when mounting.

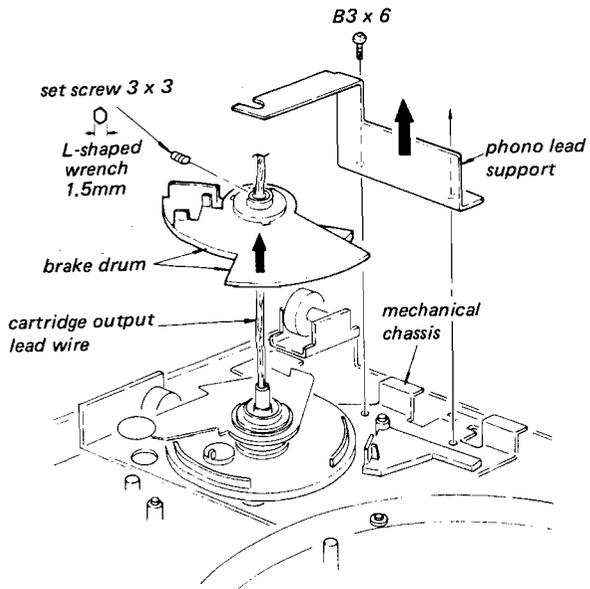

Module slide system: M102 → worm wheel (A) → driving gear

Tonearm system: M101 → worm wheel (B) → midway gear (C) →
midway gear (B) → midway gear (A) → tonearm

The gear angles do not need to be aligned, but the gears must engage.

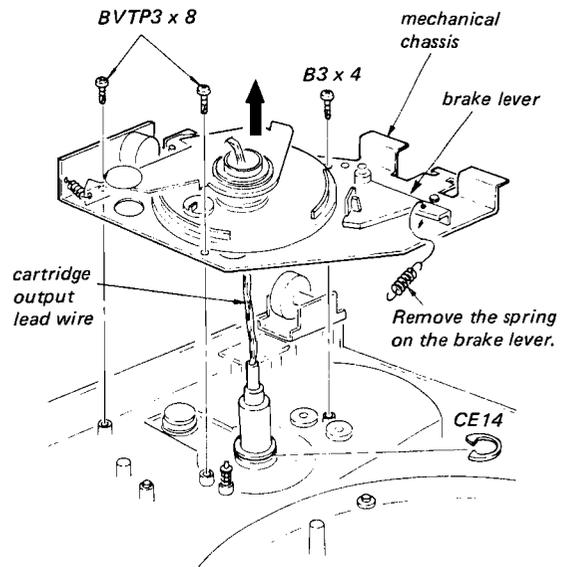

S-FL3/FL3C

BRAKE DRUM

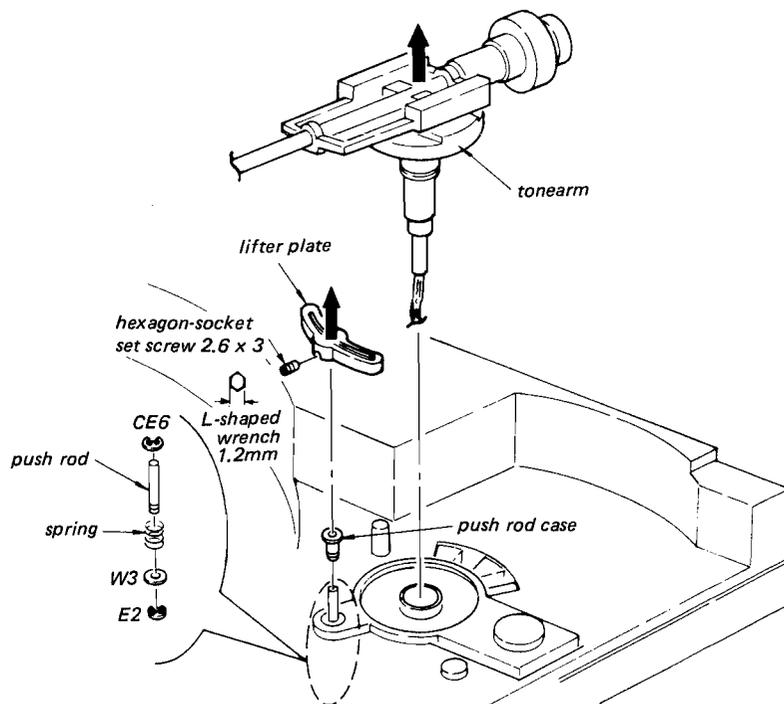

Note: After mounting, perform the brake drum position adjustment on page 25.

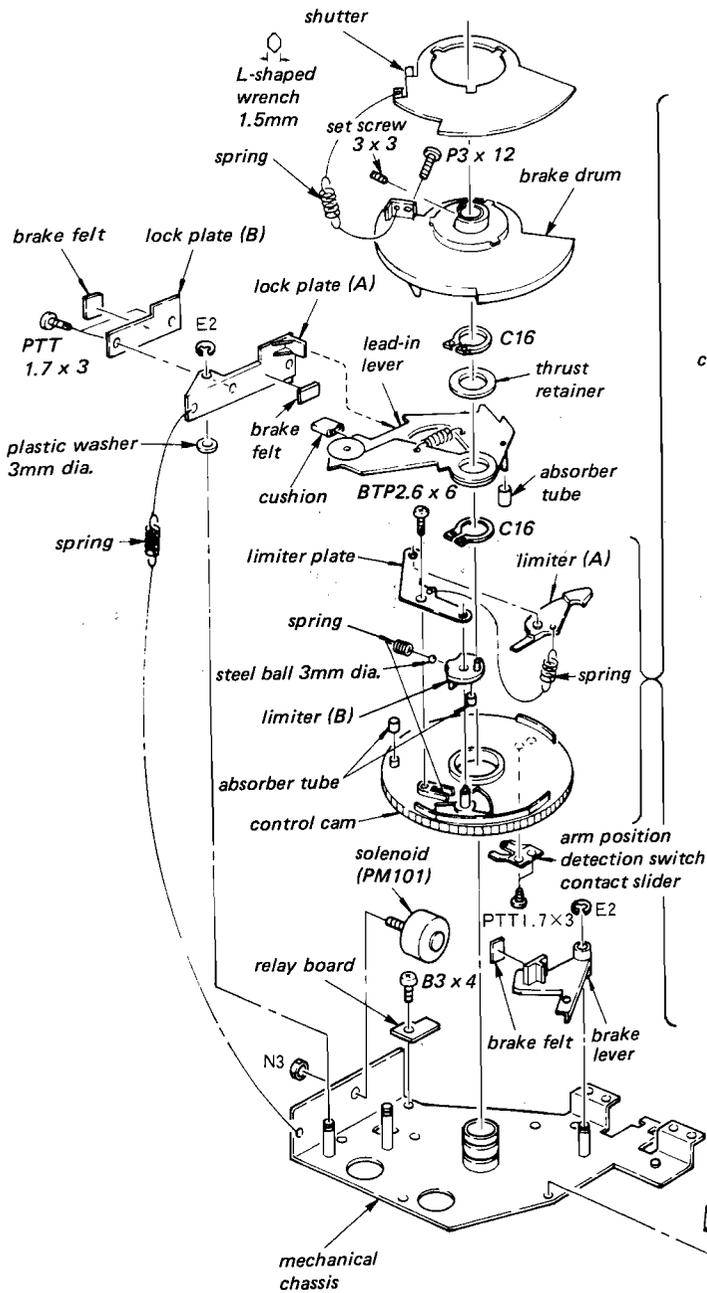

MECHANICAL CHASSIS

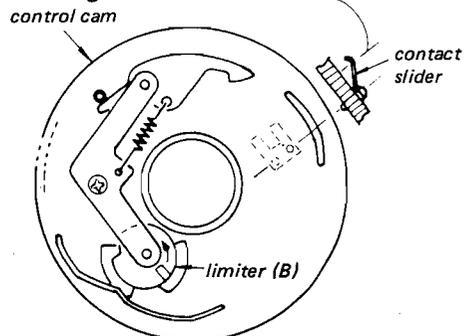

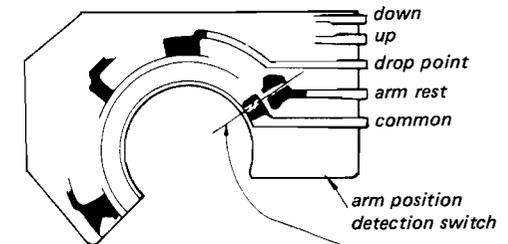

TONEARM, LIFTER PLATE

CONTROL CAM

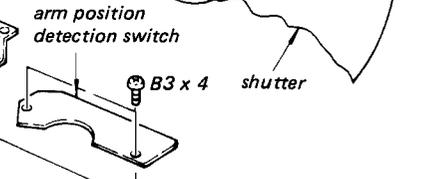

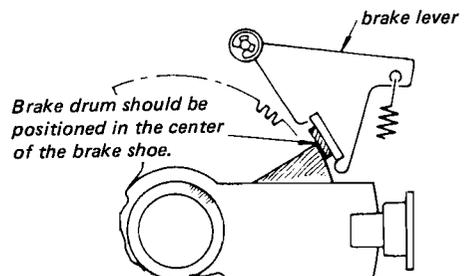

— Contact slider position when the tonearm is on the arm rest —

Turn limiter (B) in the direction of the arrow.

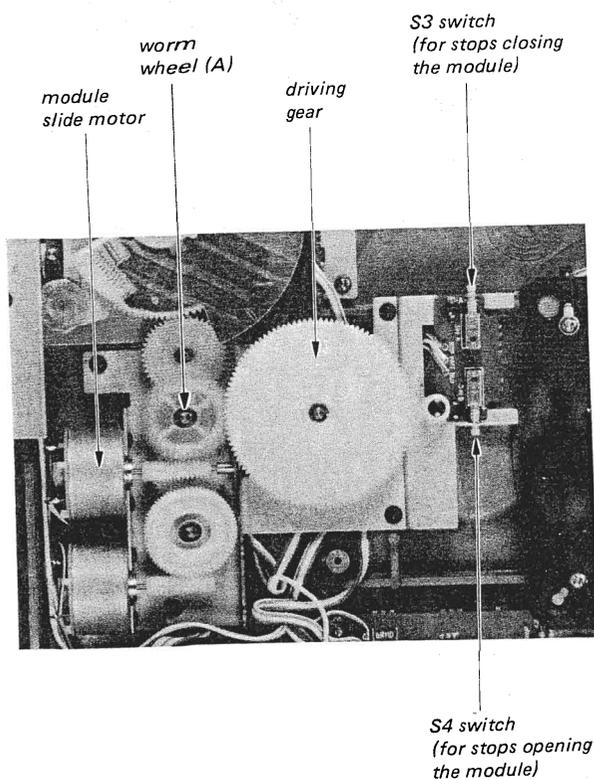

— Brake shoe position when tonearm is on the arm rest —
(Return position adjustment required.)

SECTION 3 ADJUSTMENTS

3-1. NOTES ON ADJUSTMENT

- When performing adjustments which require turntable rotation, place a record on the turntable. If this is not done, the turntable will not rotate when the START/STOP switch is pressed.
- When the POWER switch is turned ON with the bottom plate removed, the module slide motor and gears do not stop rotating, but this is normal. They can be stopped by pushing S3 or S4, shown below.

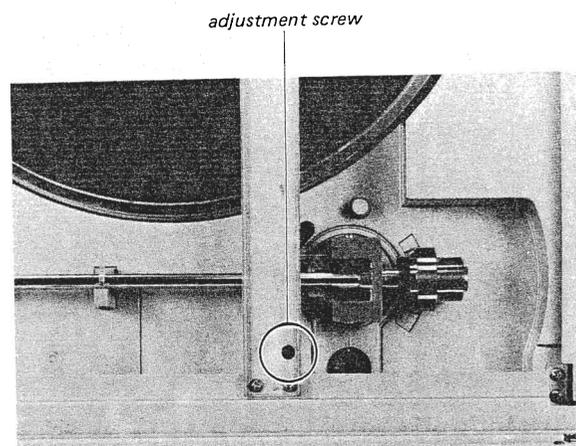

3-2. MECHANICAL ADJUSTMENT

Stylus Drop-point Adjustment

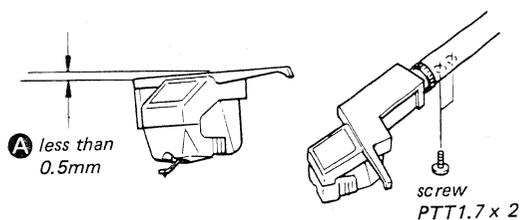

1. Remove the adjustment hole cap.
2. Set stylus force, IFC scale.
(for VC-41G cartridge, stylus force 1.5g; IFC scale 1.5)
3. SPEED switch: 33 rpm
4. Use test record YFSC-16. Press START/STOP switch.
5. Turn the adjustment screw so that the stylus tip drops on the record at the 7-15 count position.
clockwise: drop-point moves inward (larger count)
counterclockwise: drop-point moves outward (lower count)

Note: The proper adjustment for a 30cm record is also correct for a 17cm record.

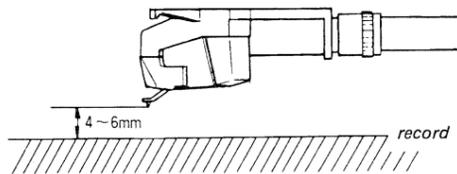

Shell's Horizontal Balance Adjustment

Loosen the neck cylinder screw and adjust so that section A (shell slant) is less than 0.5mm.

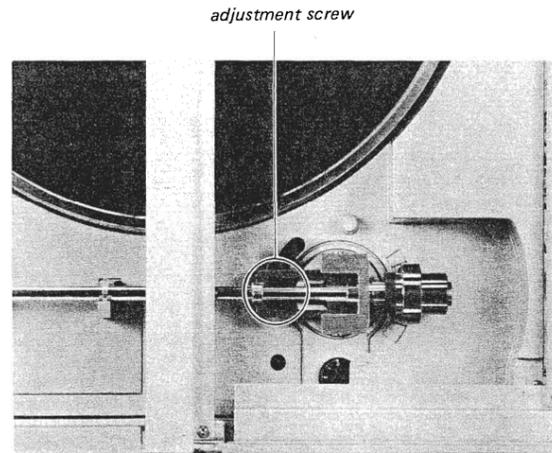

Stylus Height Adjustment

1. Obtain zero balance and apply appropriate stylus force with counterweight. (1.5g for VC-41G cartridge)
2. POWER switch: ON
3. Put a record on and press START/STOP switch.
4. Turn the POWER switch OFF when the tonearm reaches the end of the record, and the arm lifter rises to perform auto return.
5. At this time, the distance between the record and the stylus tip is 4 – 6mm.

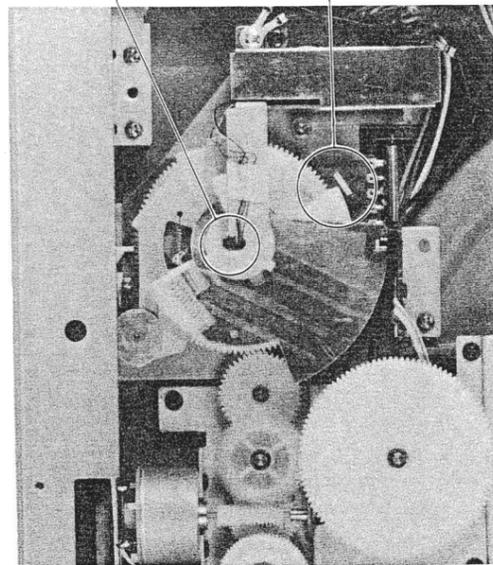

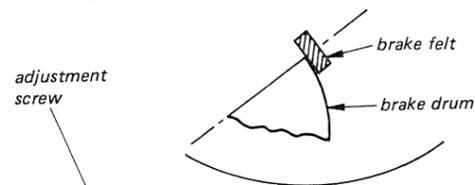

6. Confirm that the cartridge does not touch the top plate when the module is pulled out.

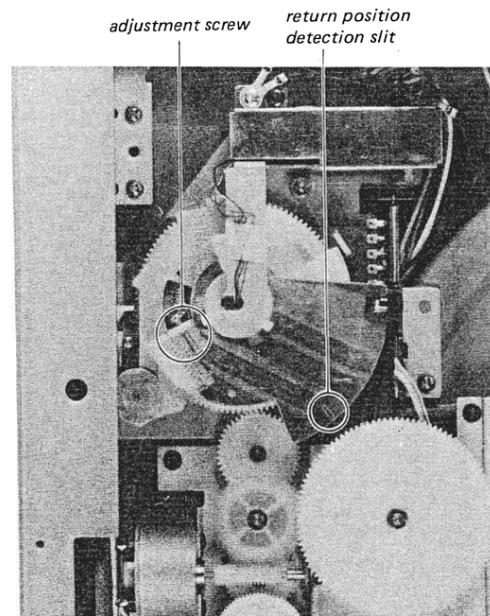

Brake Drum Position Adjustment

1. Lock the tonearm on the arm rest.
2. Adjust the brake drum position so that the brake drum edge comes to the center of the brake felt.

Return Position Adjustment

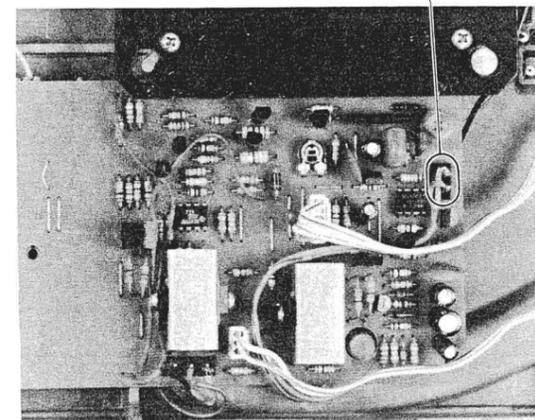

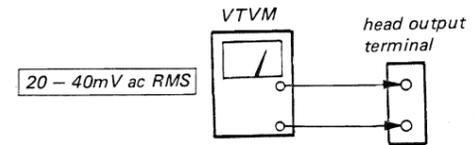

1. SPEED switch: 33 rpm
2. Put on a test record. (YFSC-16)
Move the tonearm by hand and place in the return check groove.
3. Press the START/STOP switch and turn the adjustment screw so that it returns at count of 10 – 12.
Clockwise: to the groove
Counterclockwise: to the end of the record

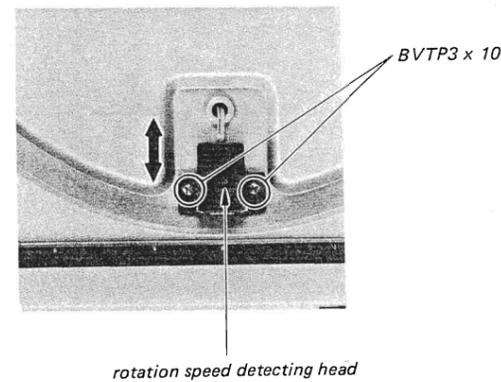

3-3. ELECTRICAL ADJUSTMENTS

Rotation Speed Detecting Head Output Adjustment

1. POWER switch: ON
START switch: ON
SPEED switch: 33 rpm
2. Loosen the adjustment screw (BVTP3 x 10) and move the head back and forth so that the head output terminal is 20 – 40mV ac RMS.

– With turntable removed –

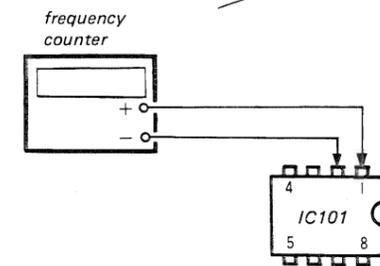

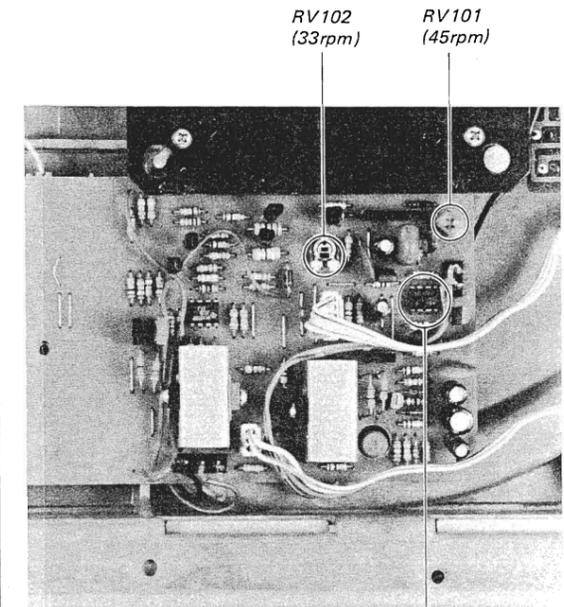

3. After adjusting, rotate the turntable slowly by hand, and confirm that the head and magnetic surface of the turntable do not touch.

Note: The turntable magnetic surface and head surface should not be less than 0.3mm apart (thickness of a business card). Improper adjustment causes wow and flutter.

Rotation Speed Adjustment

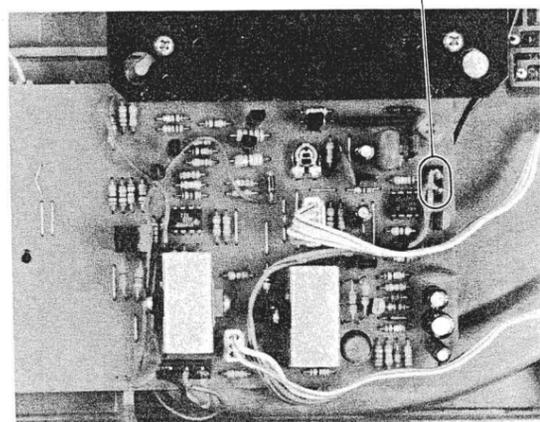

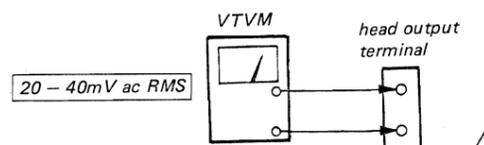

1. Connect frequency counter to IC101 pin ①.
2. POWER switch: ON
START switch: ON
SPEED switch: 45 rpm
3. Adjust RV101 so that the frequency counter reading is 384Hz.
4. SPEED switch: 33 rpm
5. Adjust RV102 so that the frequency counter reading is 284Hz.

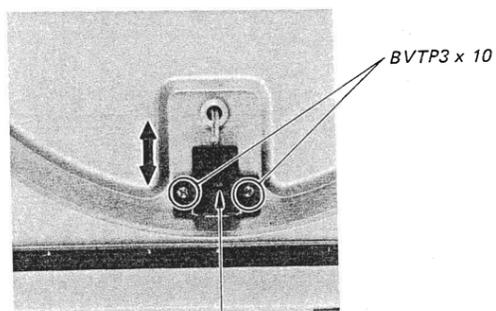

3-3. ELECTRICAL ADJUSTMENTS

Rotation Speed Detecting Head Output Adjustment

1. POWER switch: ON
START switch: ON
SPEED switch: 33 rpm
2. Loosen the adjustment screw (BVTP3 x 10) and move the head back and forth so that the head output terminal is 20 – 40mV ac RMS.

— With turntable removed —

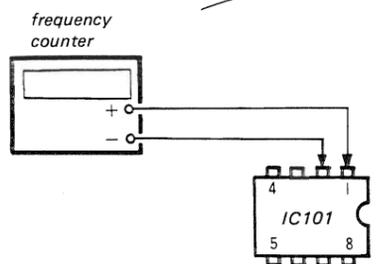

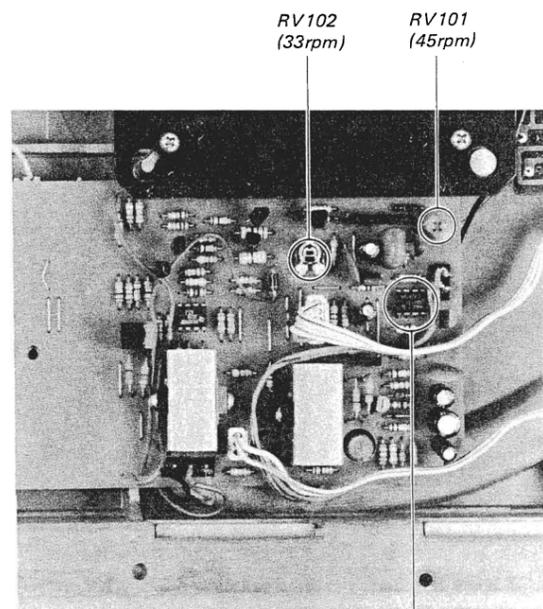

rotation speed detecting head

3. After adjusting, rotate the turntable slowly by hand, and confirm that the head and magnetic surface of the turntable do not touch.

Note:The turntable magnetic surface and head surface should note be less than 0.3mm apart (thickness of a business card). Improper adjustment causes wow and flutter.

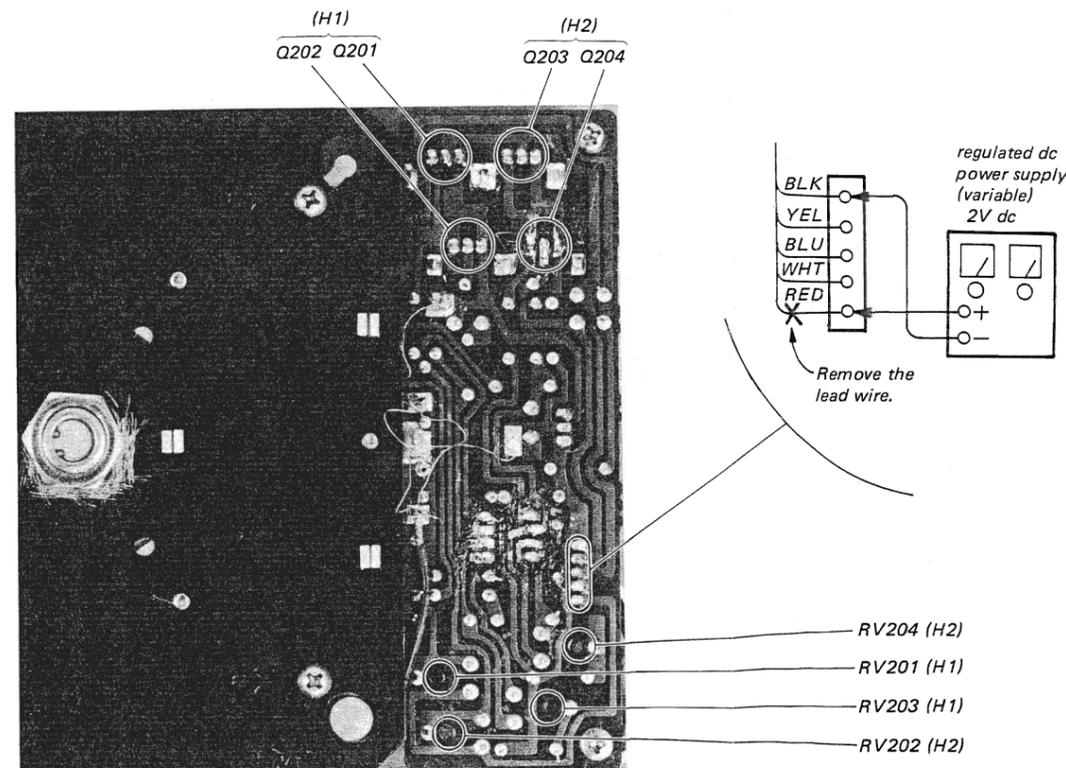

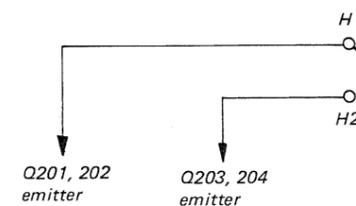

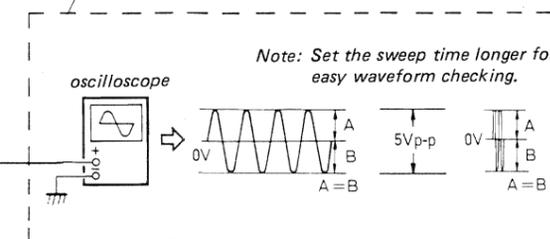

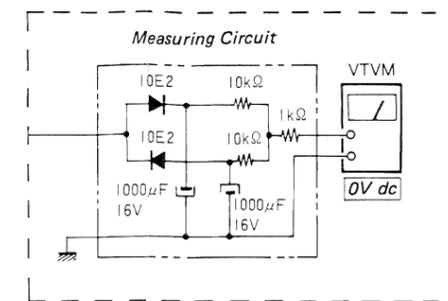

Rotation Speed Adjustment

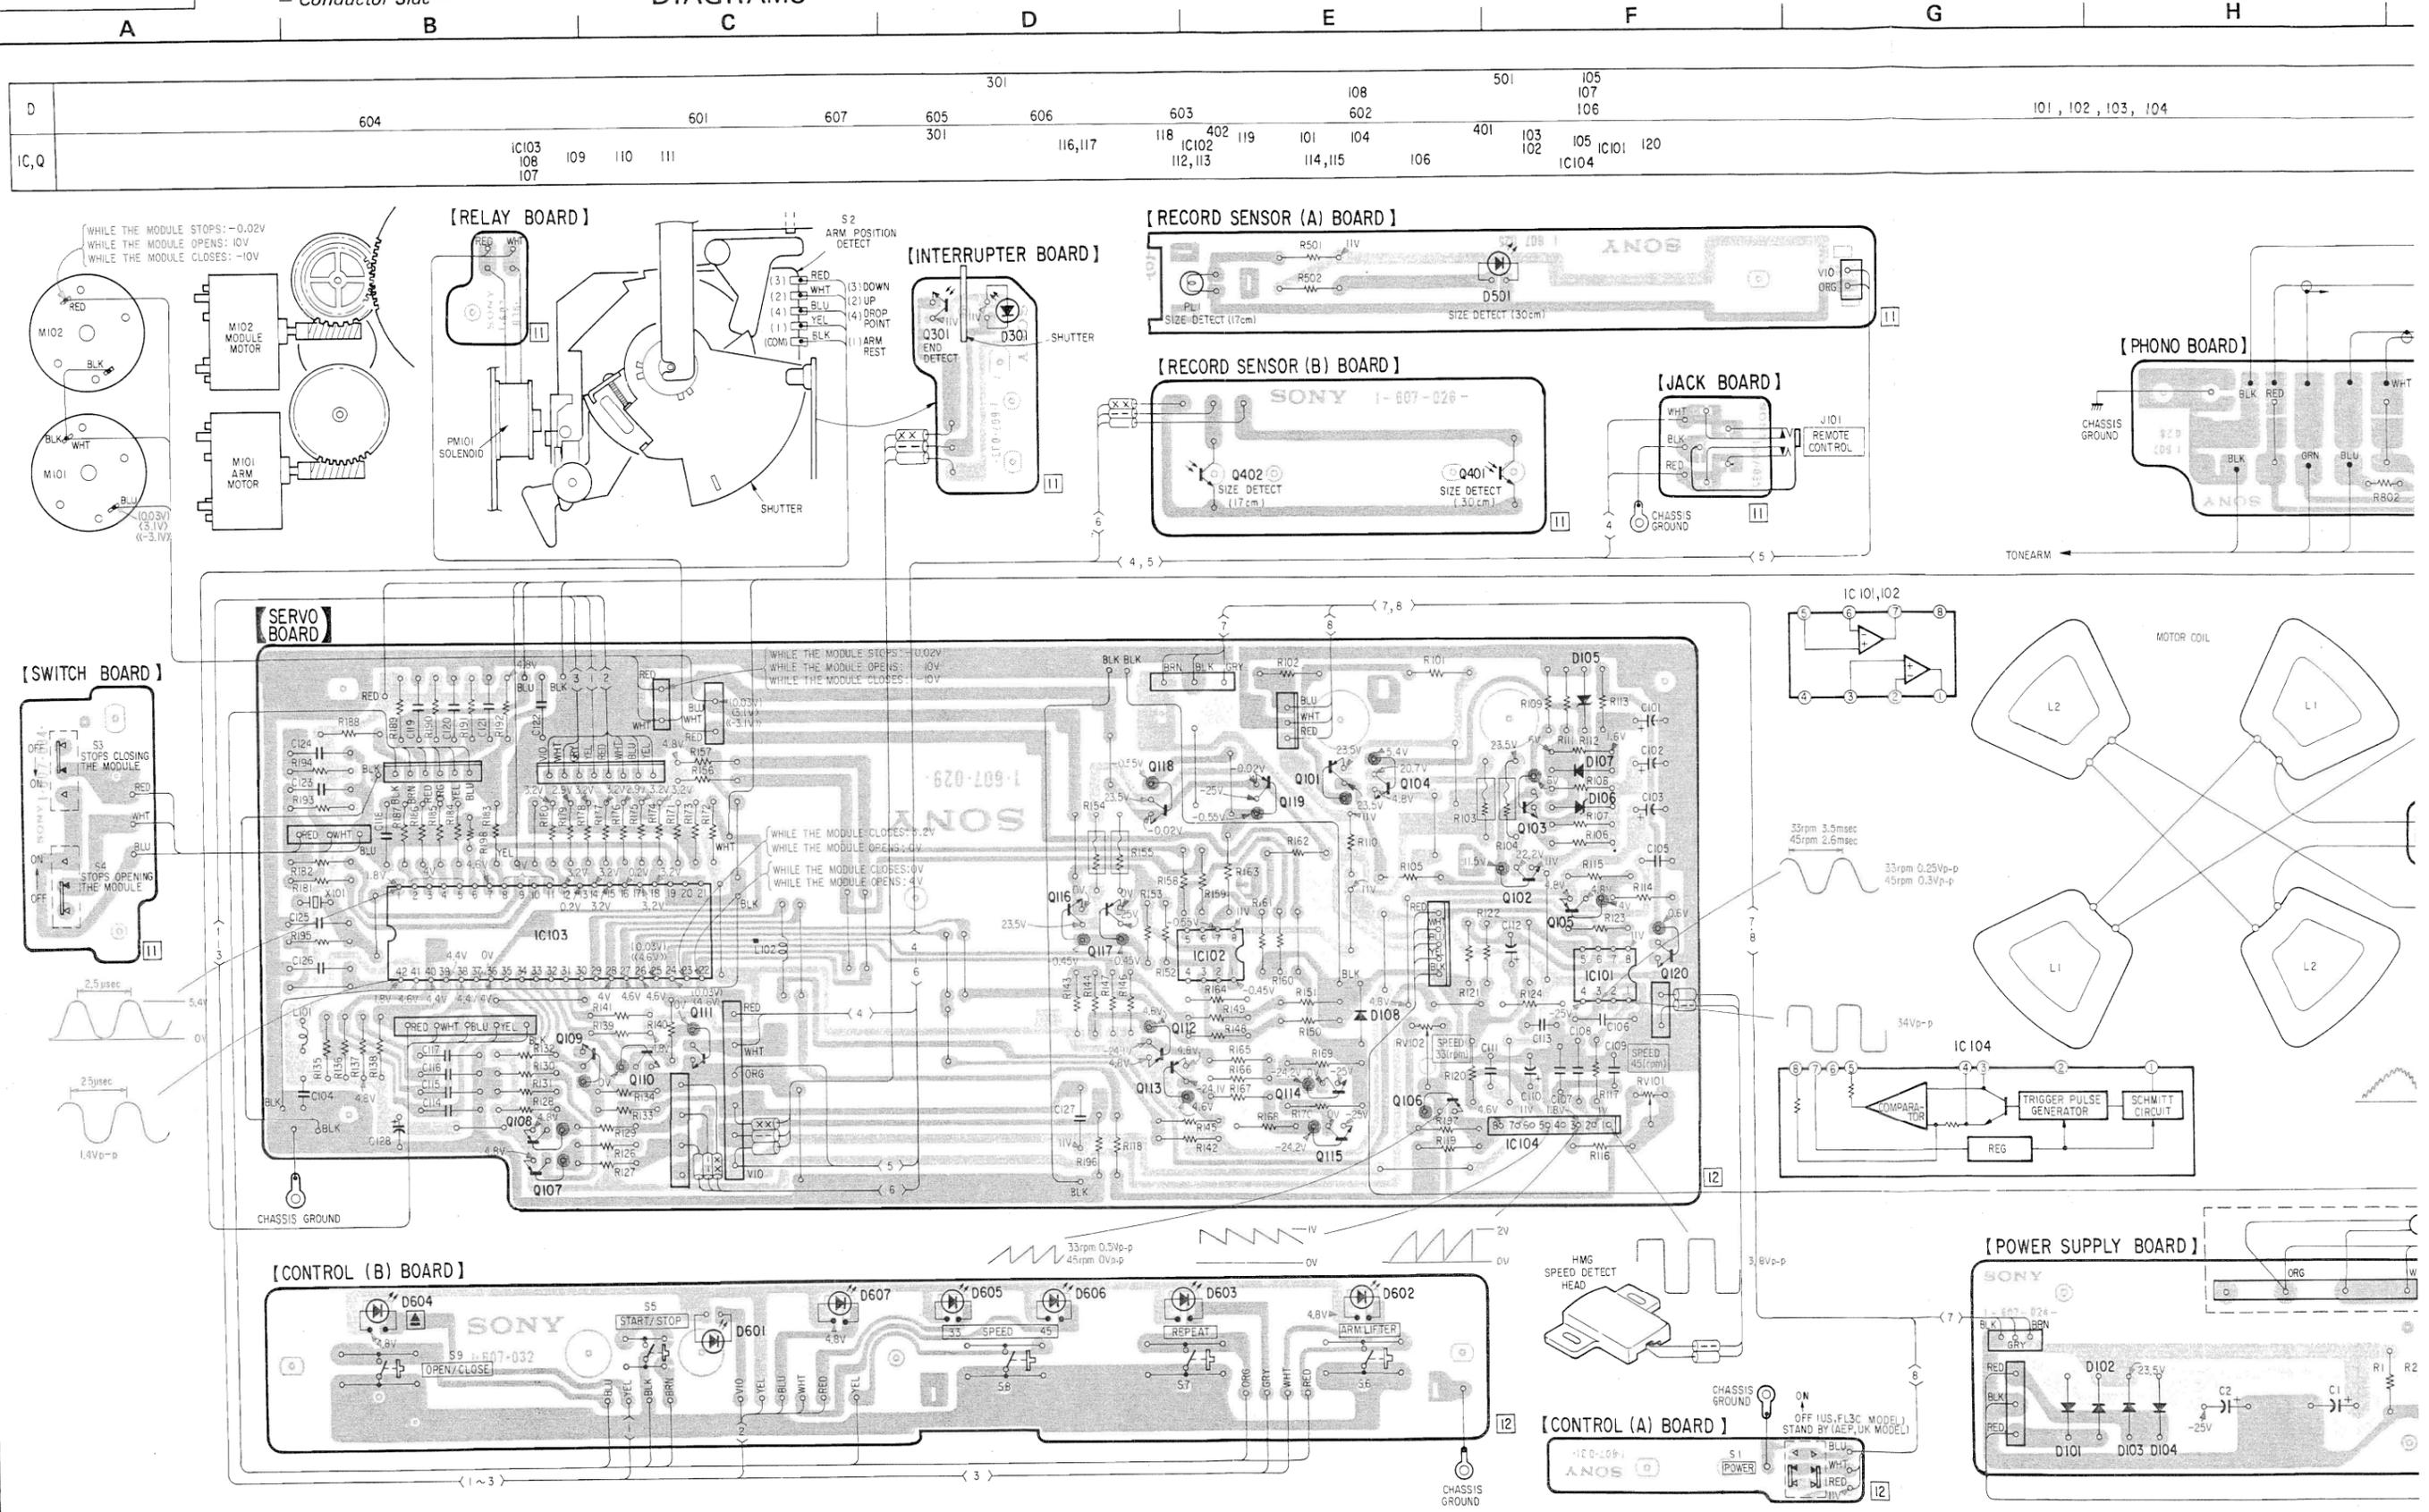

1. Connect frequency counter to IC101 pin ①.
2. POWER switch: ON
START switch: ON
SPEED switch: 45 rpm
3. Adjust RV101 so that the frequency counter reading is 384Hz.
4. SPEED switch: 33 rpm
5. Adjust RV102 so that the frequency counter reading is 284Hz.

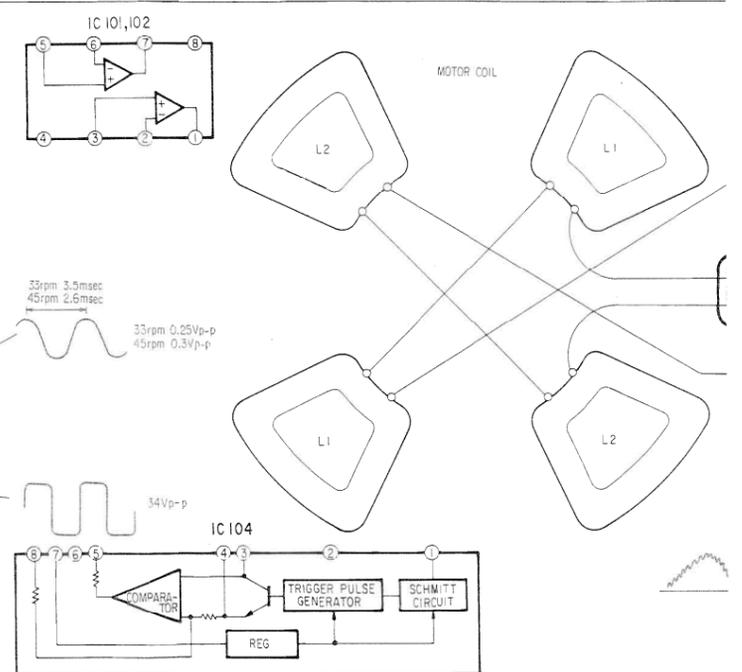

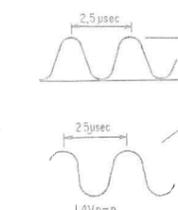

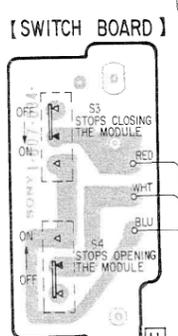

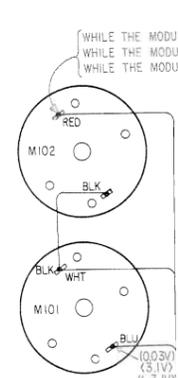

Gain/Offset Adjustment

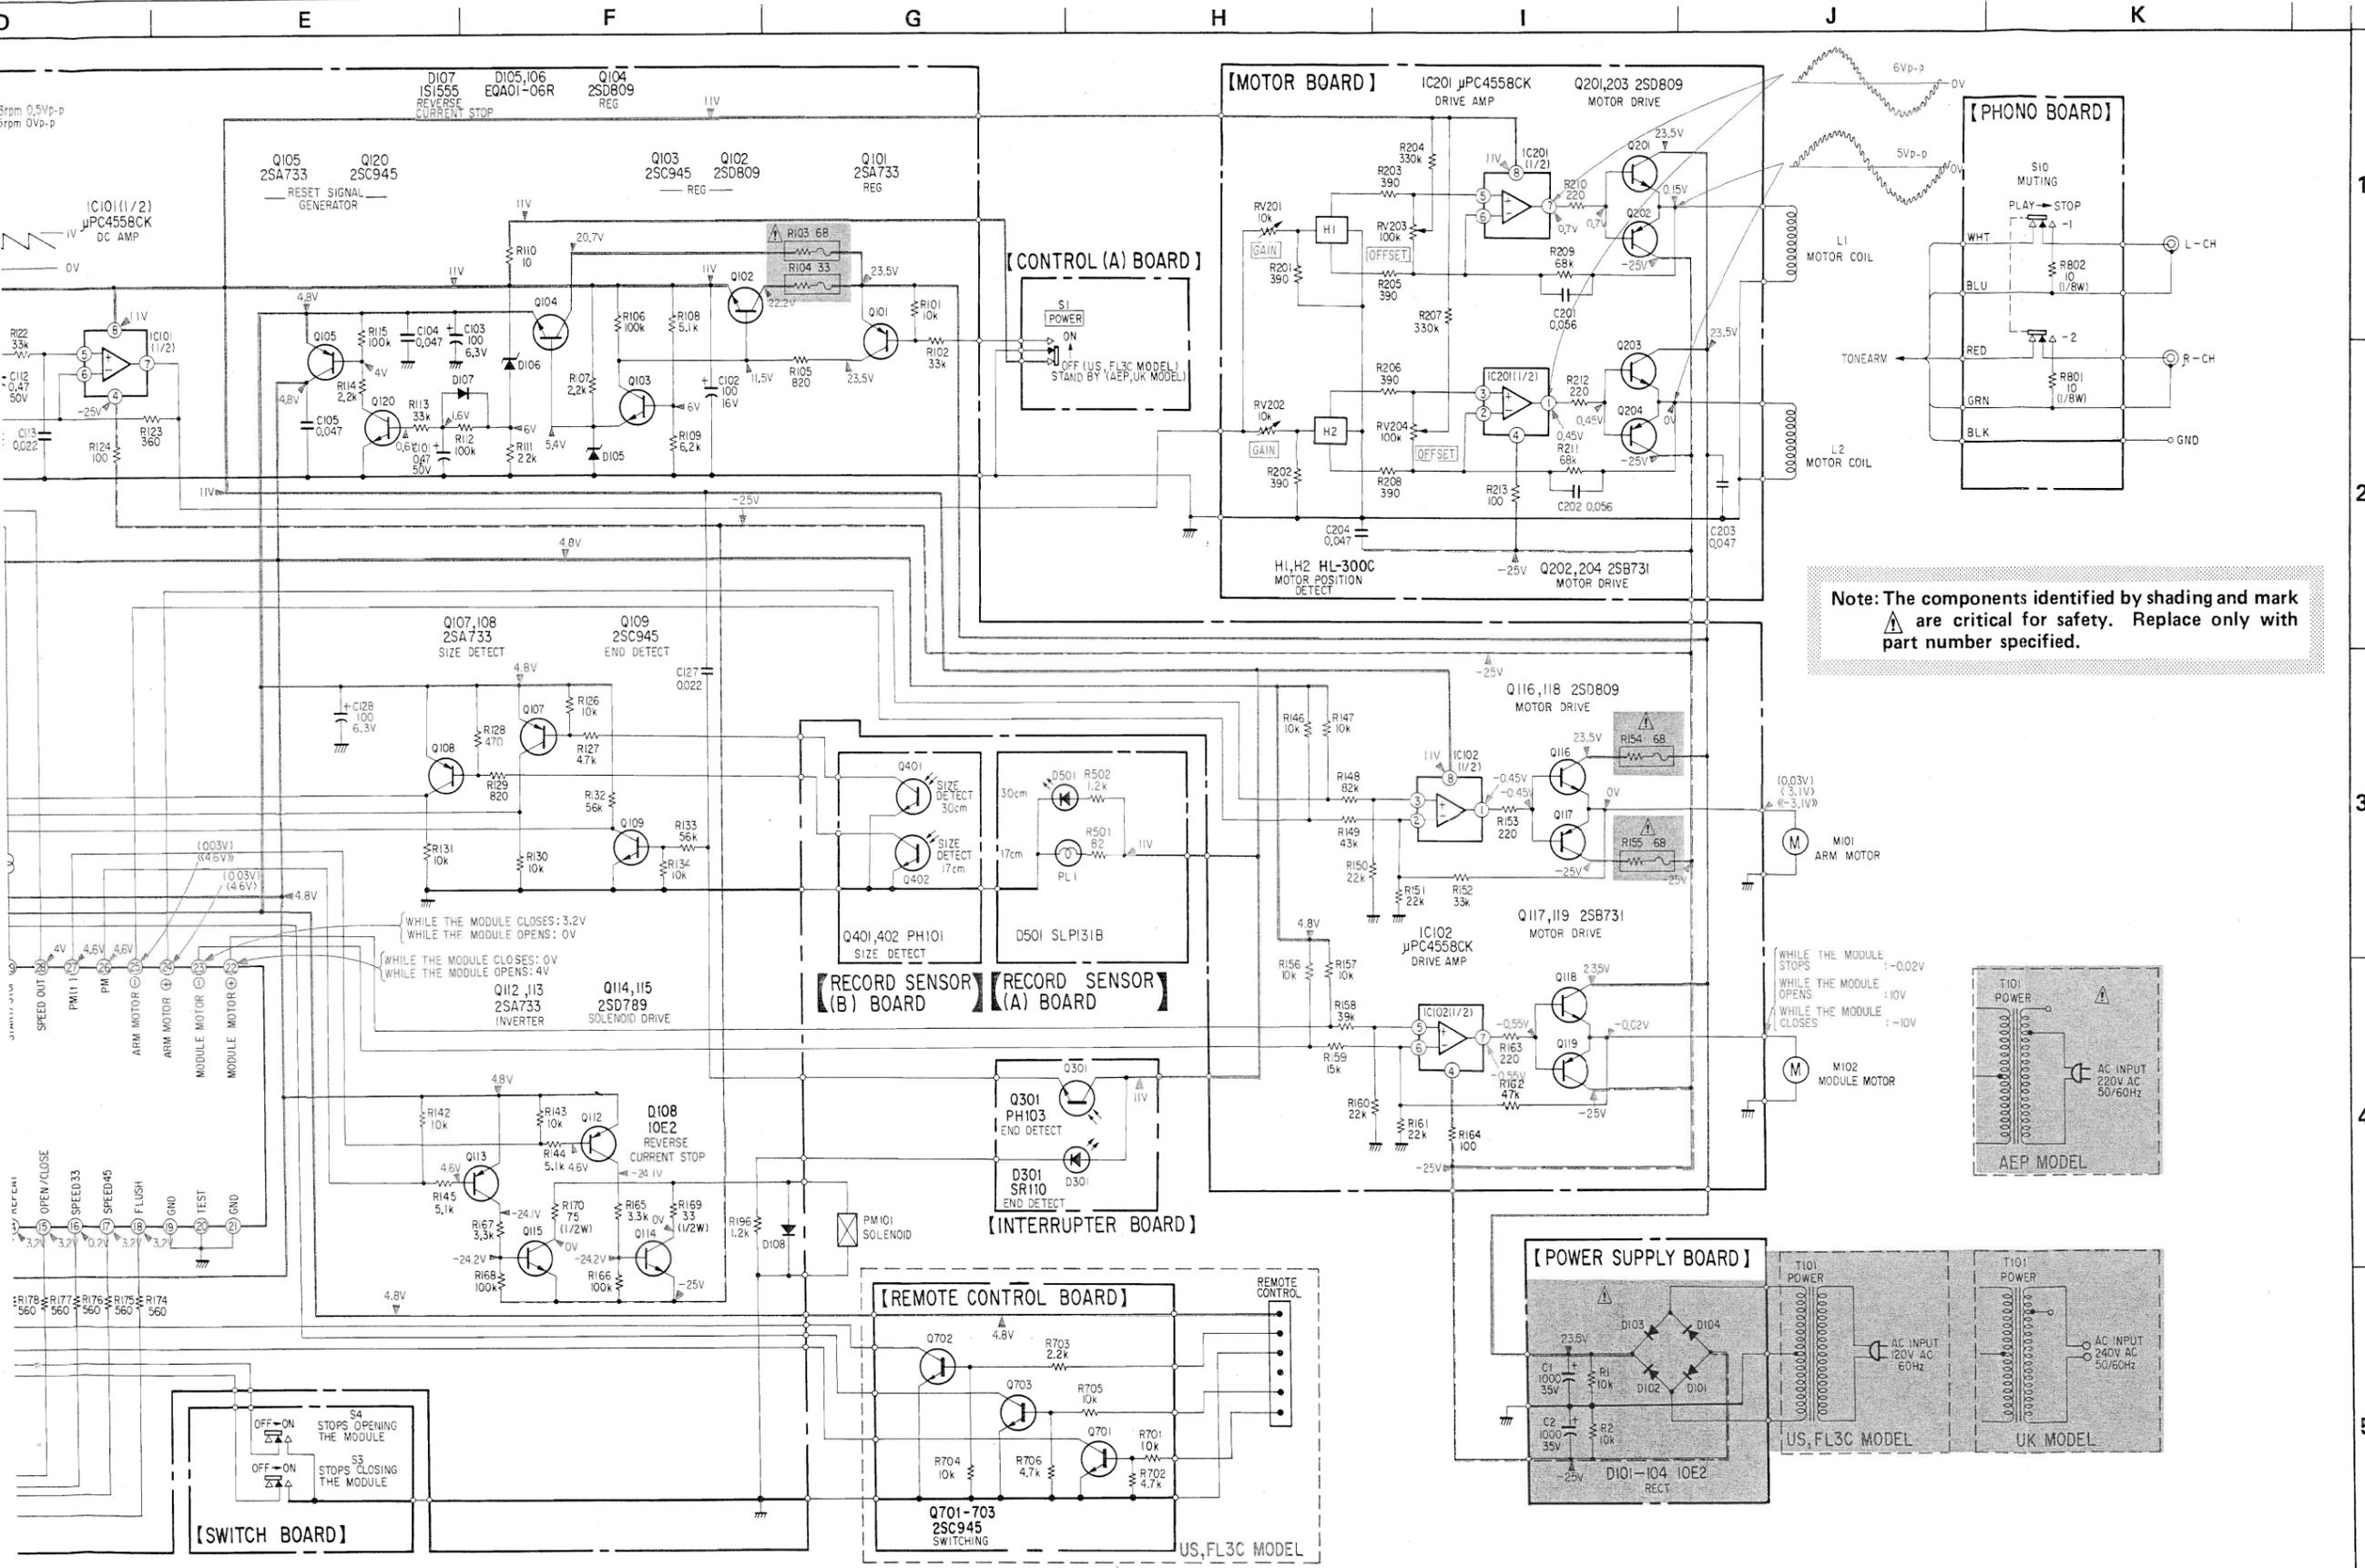

1. Disconnect the lead wire (red) in the figure shown below and apply DC 2V.
2. SPEED switch: 33 rpm
POWER switch: ON, motor rotating
3. Gain Adjustment:
Adjust RV201 (H1) and RV202 (H2) so that the emitter voltage of Q201, 202 (H1) and Q203, 204 (H2) is 5Vp-p.
4. Offset Adjustment:
Next, adjust RV203 (H1) and RV204 (H2) so that the emitter waveforms of Q201, 202 (H1) and Q203, 204 (H2) are as shown at the right (or so that DC potential is 0V).

— For schematic diagram —

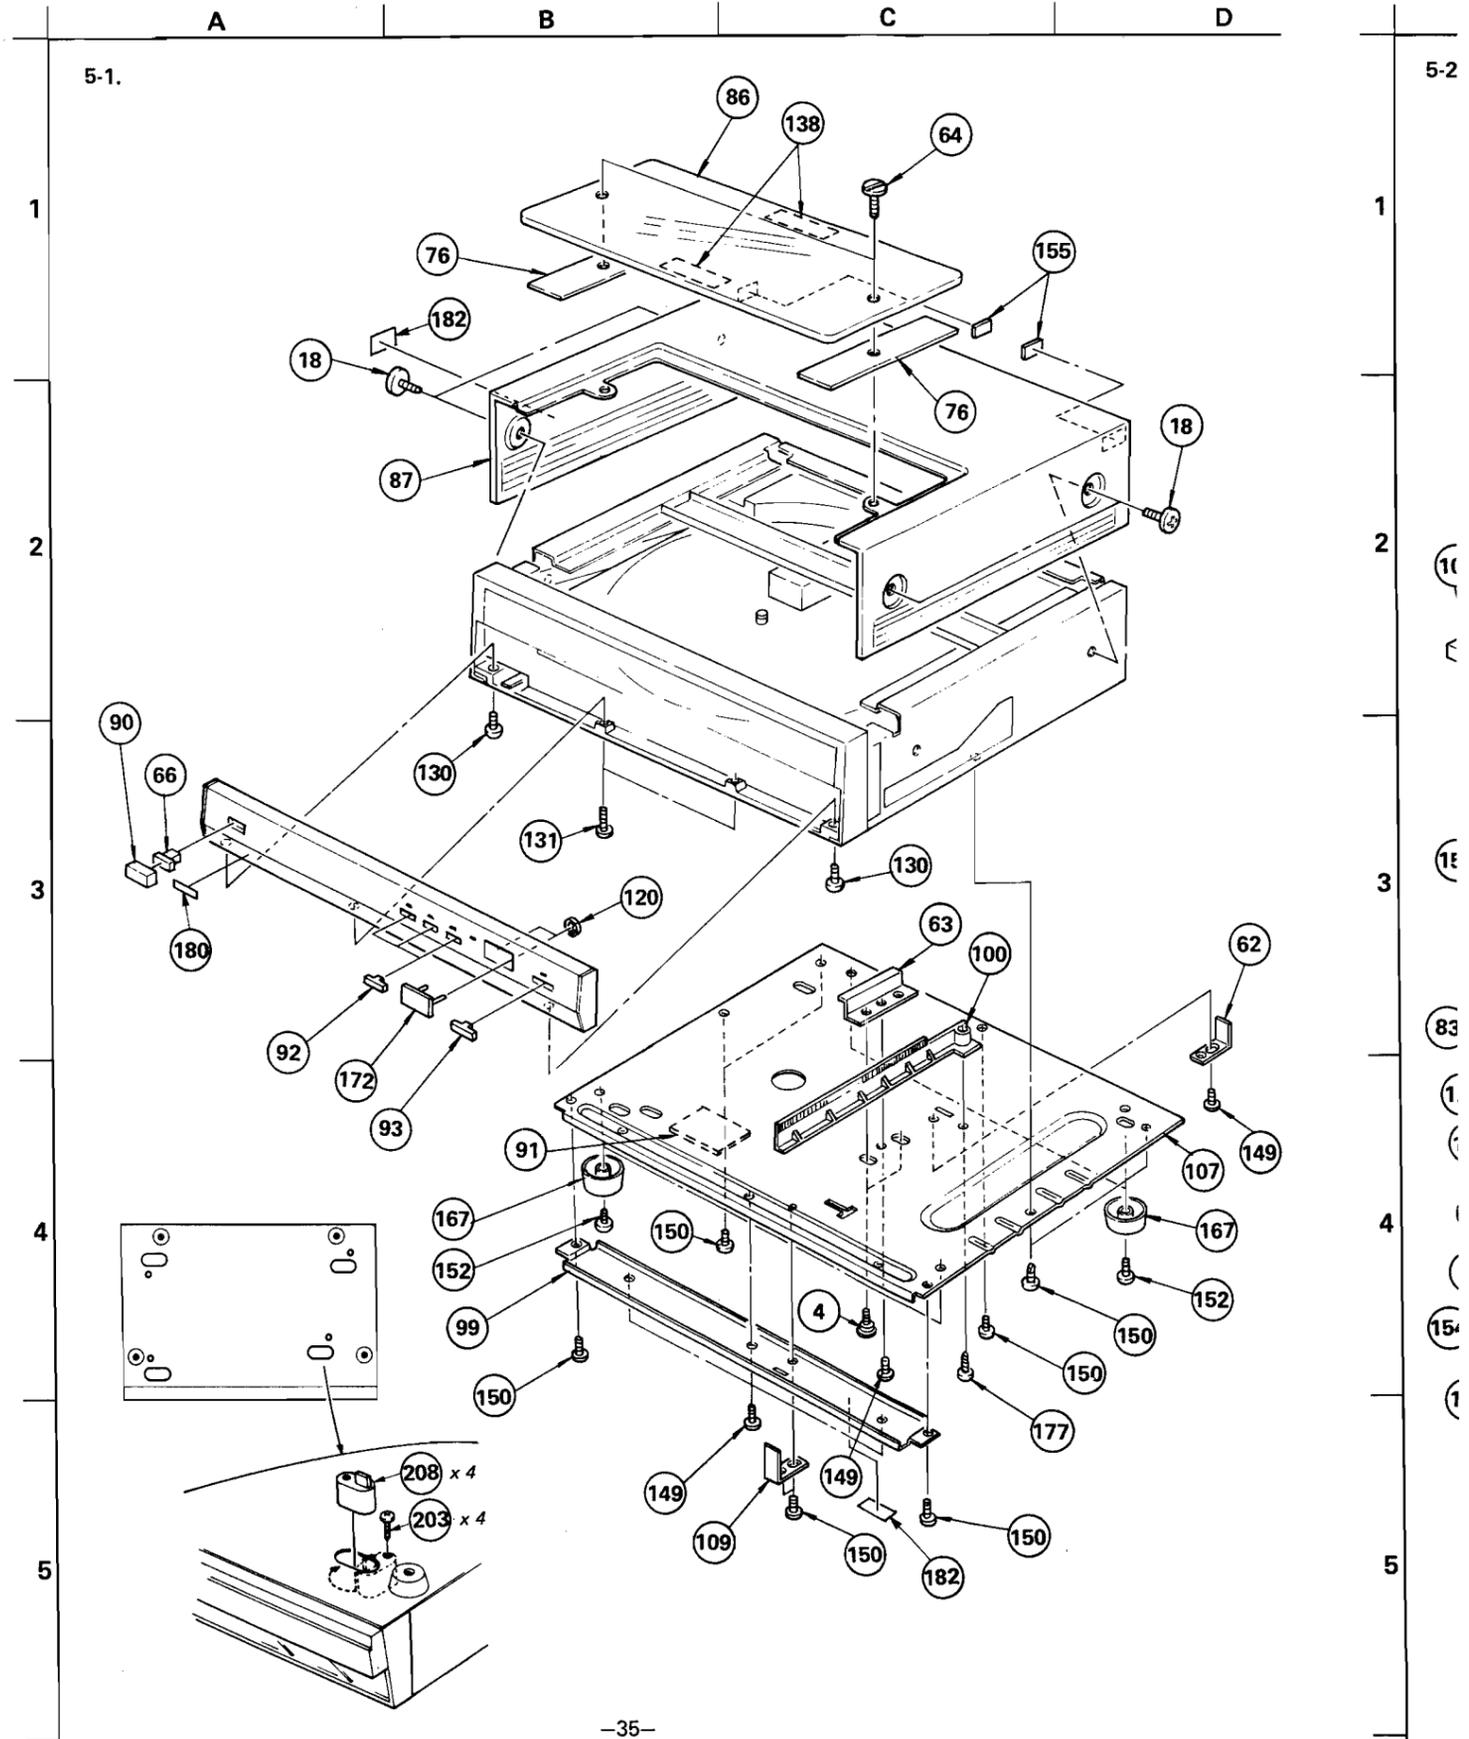

- Note:**
- All capacitors are in μF unless otherwise noted. pF : μF 50WV or less are not indicated except for electrolytics and tantalums.
 - All resistors are in ohms, $\frac{1}{4}W$ unless otherwise noted. $\text{k}\Omega$: 1000 Ω , $\text{M}\Omega$: 1000 $\text{k}\Omega$
 - : fusible resistor.
 - : adjustment for repair.
 - : B+ bus.
 - : B- bus.
 - Voltages are dc with respect to ground unless otherwise noted.
 - Readings are taken under no-signal conditions.
 - No mark : POWER switch ON with tonearm set on arm rest.
 - () : When playing or tonearm set on arm rest at 33rpm.
 - < > : Until tonearm lowers onto record after pushing START switch at 33rpm.
 - << >> : Until tonearm returns to arm rest after pushing STOP switch at 33rpm.
 - Voltage variations may be noted due to normal production tolerances.
 - Waveforms are taken with respect to ground at 33rpm with tonearm set on arm rest.

Note: Voltages are measured with a VOM (50k Ω /V).

— For mounting diagram —

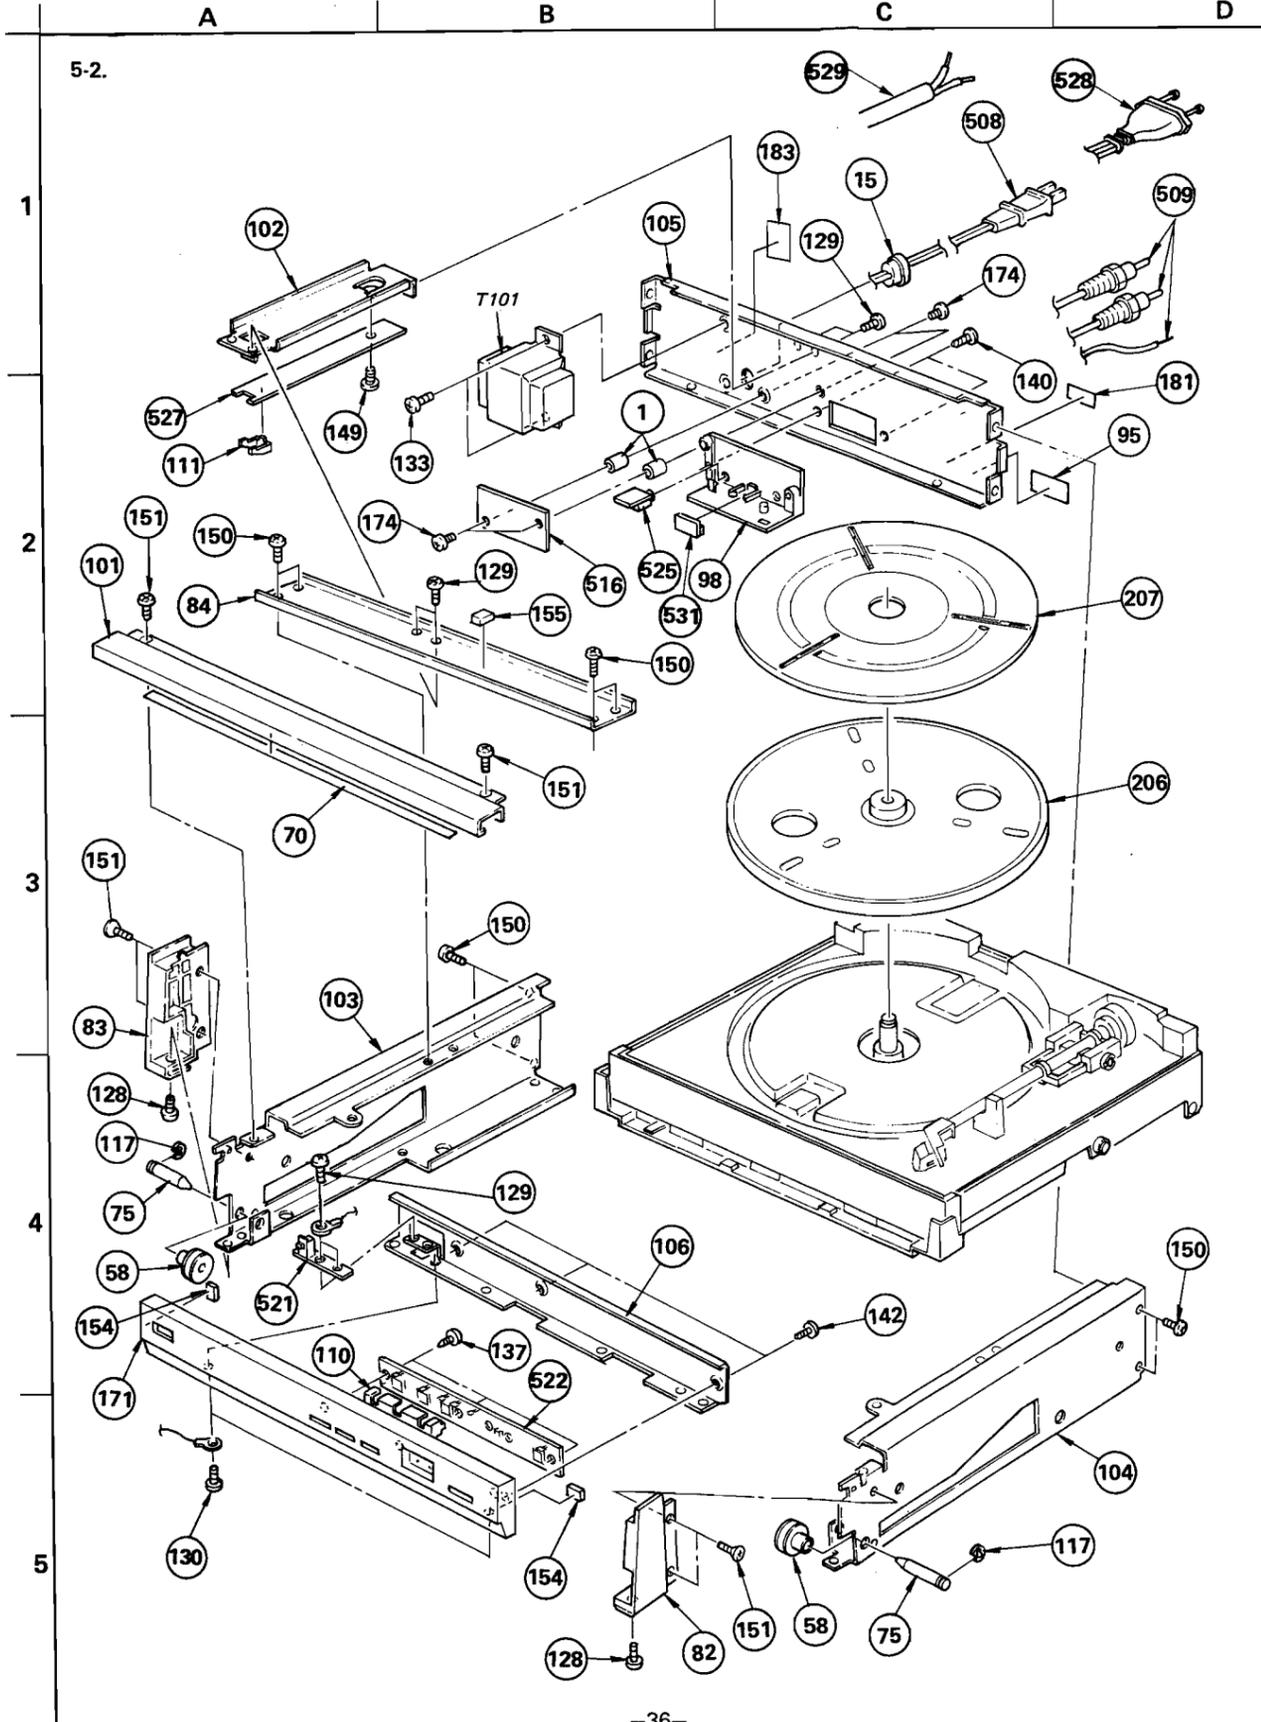

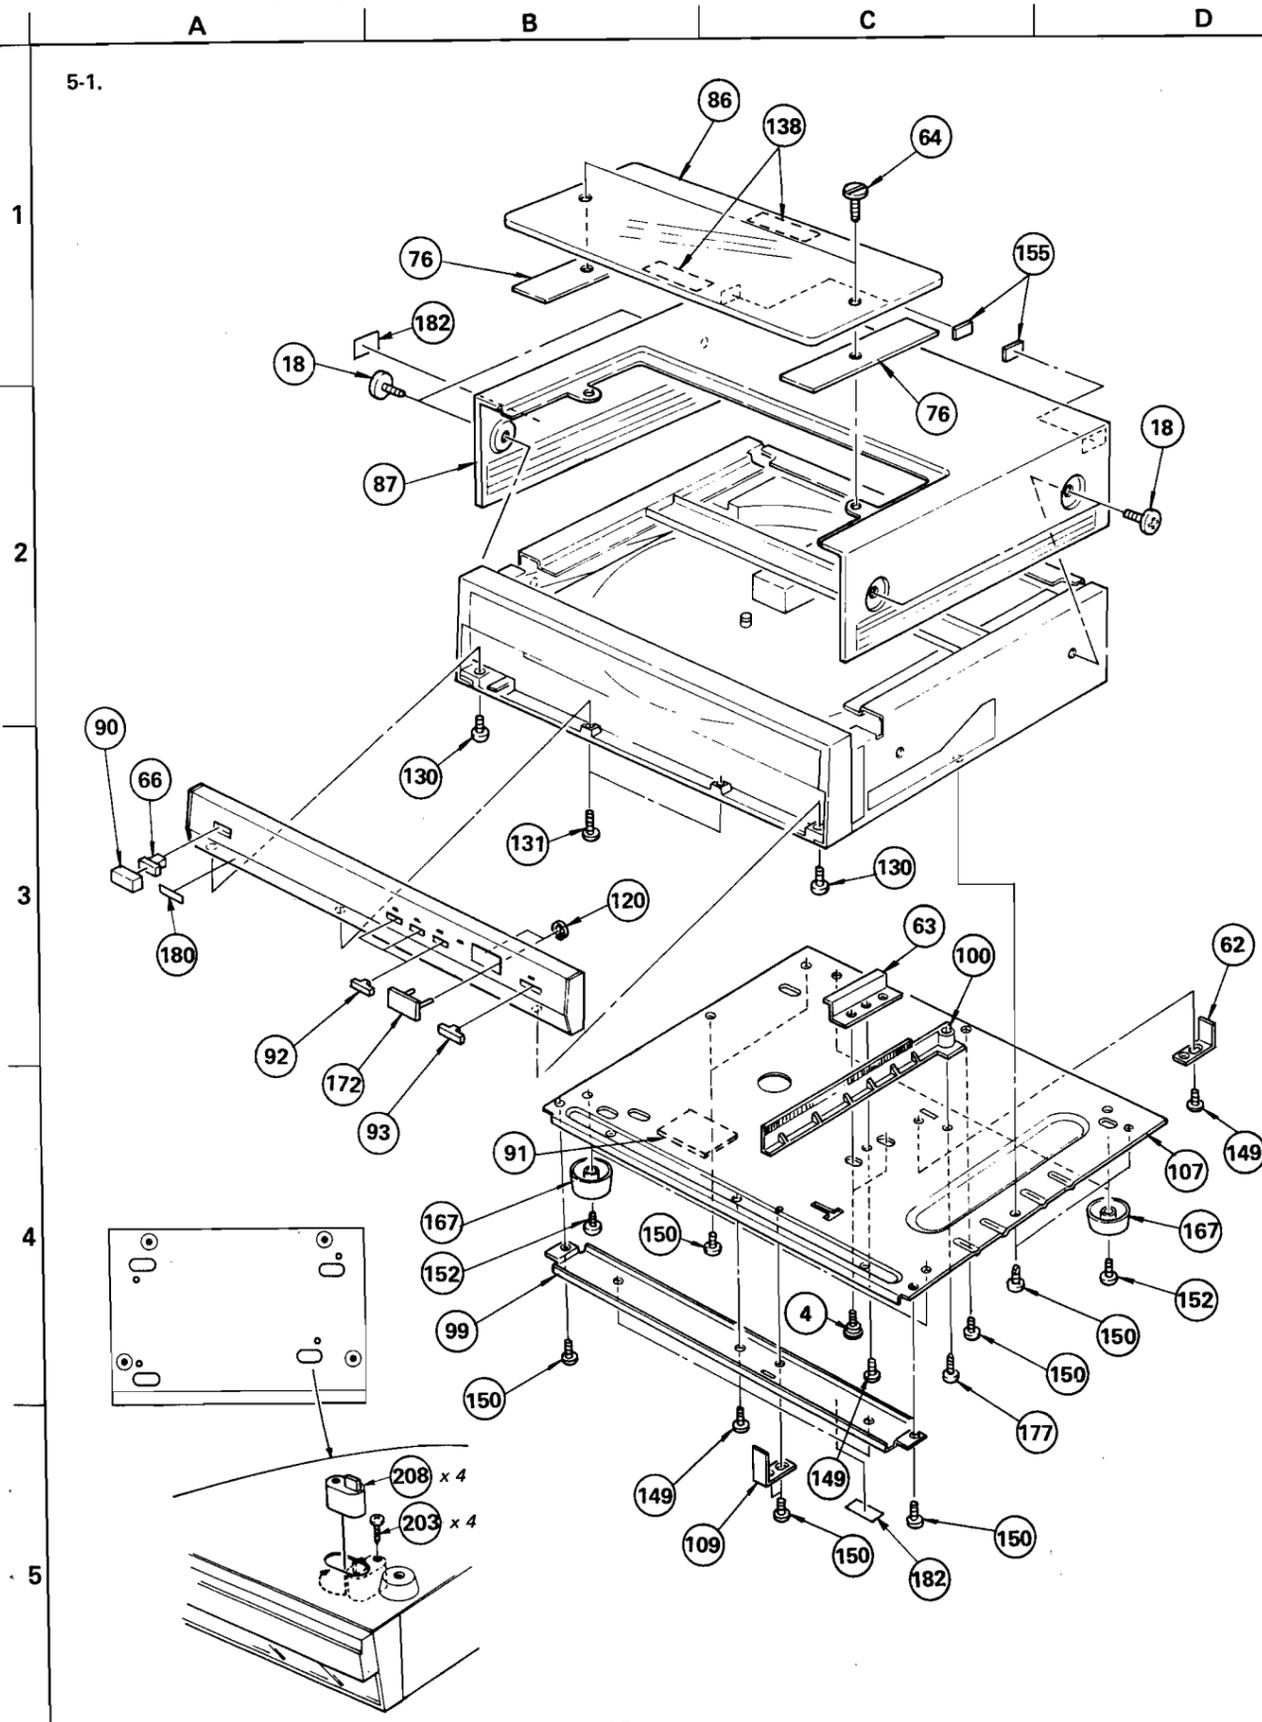

- Note:**
- Color code of sleeving over the end of the jacket.
-
- : parts extracted from the component side.
 - : parts extracted from the conductor side.
 - : part mounted on the conductor side.
 - : B+ pattern

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "♣" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers.
MF:μF, PF:μμF.

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

- F : nonflammable

COILS

- MMH : mH, UH : μH

The components identified by shading and mark **♣** are critical for safety. Replace only with part number specified.

SEMICONDUCTORS

- In each case, U : μ, for example:
 UA...: μA...; UPA...: μPA...; UPC...: μPC,
 UPD...: μPD...

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "♣" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF. Common capacitors are omitted. Refer to the following lists for their part numbers. MF:μF, PF:μμF.

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

- F : nonflammable

COILS

- MMH : mH, UH : μH

The components identified by shading and mark  are critical for safety. Replace only with part number specified.

SEMICONDUCTORS

- In each case, U : μ, for example:
 UA...: μA..., UPA...: μPA..., UPC...: μPC,
 UPD...: μPD...

HARDWARE NOMENCLATURE

Screw:

Nut, Washer, Retaining ring:

Reference Designation	Shape	Description	Remarks
SCREWS			
P		pan-head screw	binding-head (B) screw for replacement
PWH		pan-head screw with washer face	binding-head (B) screw and flat washer for replacement
PS PSP		pan-head screw with spring washer	binding-head (B) screw and spring washer for replacement
PSW PSPW		pan-head screw with spring and flat washers	binding-head (B) screw and spring and flat washers for replacement
R		round-head screw	binding-head (B) screw for replacement
K		flat-countersunk-head screw	
RK		oval-countersunk-head screw	
B		binding-head screw	
T		truss-head screw	binding-head (B) screw for replacement
F		flat-fillister-head screw	
RF		fillister-head screw	
BV		brazier-head screw	

Reference Designation	Shape	Description	Remarks
SELF-TAPPING SCREWS			
TA		self-tapping screw	ex: TA, P 3 x 10
PTP		pan-head self-tapping screw	binding-head self-tapping (TA, B) screw for replacement
PTPWH		pan-head self-tapping screw with washer face	binding-head self-tapping (TA, B) screw and flat washer for replacement
PTTWH		pan-head thread-rolling screw with washer face	binding-head (B) screw and flat washer for replacement
SET SCREWS			
SC		set screw	
SC		hexagon-socket set screw	ex: SC 2.6 x 4, hexagon socket
NUT			
N		nut	
WASHERS			
W		flat washer	
SW		spring washer	
LW		internal-tooth lock washer	ex: LW3, internal
LW		external-tooth lock washer	ex: LW3, external
RETAINING RINGS			
E		retaining ring	
G		grip-type retaining ring
