

# SCD-C555ES

## SERVICE MANUAL

Ver 1.0 2001. 03

US Model  
Canadian Model

Model Name Using Similar Mechanism	NEW
CD Mechanism Type	CDM59A
Optical Pick-up Type	KHM-230AAA/J1NP

### SPECIFICATIONS

#### When a super audio CD is played

Playing frequency range	2 Hz to 100 kHz
Frequency response	2 Hz to 50 kHz (-3 dB)
Dynamic range	105 dB or more
Total harmonic distortion rate	0.0015 % or less
Wow and flutter	Value of measurable limit ( $\pm 0.001\%$ W. PEAK) or less

#### When a CD is played

Frequency response	2 Hz to 20 kHz
Dynamic range	99 dB or more
Total harmonic distortion rate	0.002 % or less
Wow and flutter	Value of measurable limit ( $\pm 0.001\%$ W. PEAK) or less

#### Output connector

	Jack type	Output level	Load impedance
ANALOG OUT	Phono jacks	2 Vrms (at 50 kilohms)	Over 10 kilohms
DIGITAL (CD) OUT OPTICAL*	Square optical output connector	-18 dBm	( Light emitting wave length: 660 nm )
DIGITAL (CD) OUT COAXIAL*	Coaxial output connector	0.5 Vp-p	75 ohms
PHONES	Stereo phone jack	10 mW	32 ohms

\*Output only the audio signals of the CD

#### General

Laser	Semiconductor laser ( $\lambda = 780$ nm) Emission duration: continuous
Laser radiant power:	5.47 uW at 650 nm
*These output is the value measured at a distance of about 200mm from the objective lens surface on the optical pick-up.	
Power requirements	120 V AC, 60 Hz
Power consumption	38 W
Dimensions (w/h/d)	430 × 138 × 409 mm (17 × 5 1/2 × 16 1/8 in.) incl. projecting parts
Mass (approx.)	11.0 kg (24 lbs 5 oz.)

#### Supplied accessories

- Audio connecting cord  
phono jack × 2 (Red and White) ↔ phono jack × 2 (Red and White) (2)
- phono jack × 1 (Black) ↔ phono jack × 1 (Black) (2)
- Monaural (2P) mini-plug cord (1) (Connecting cord for CONTROL A1 II) (supplied for Canadian models only)
- Remote commander (remote) RM-SC500 (1)
- R06 (size-AA) batteries (2)

Design and specifications are subject to change without notice.

## SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

## LEAKAGE

The AC leakage from any exposed metal part to earth Ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

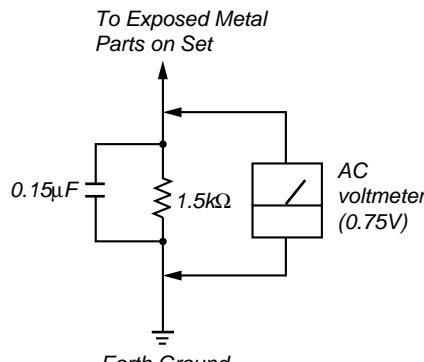

Fig. A. Using an AC voltmeter to check AC leakage.

## SAFETY-RELATED COMPONENT WARNING !!

COMPONENTS IDENTIFIED BY MARK  $\triangle$  OR DOTTED LINE WITH MARK  $\triangle$  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION AU COMPOSANT AYANT RAPPORT  
À LA SÉCURITÉ!!

LES COMPOSANTS IDENTIFIÉS PAR UNE MARQUE  $\triangle$  SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

## SECTION 1

### SERVICING NOTES (1)

#### **NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT**

The laser diode in the optical pick-up block may suffer electrostatic break-down because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body. During repair, pay attention to electrostatic break-down and also use the procedure in the printed matter which is included in the repain parts.

The flexible board is easily damaged and should be handled with care.

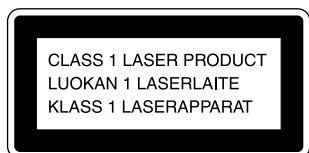

#### **NOTES ON LASER DIODE EMISSION CHECK**

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe from more than 30 cm away from the objective lens. The emission check enables continuous checking of the S curve.

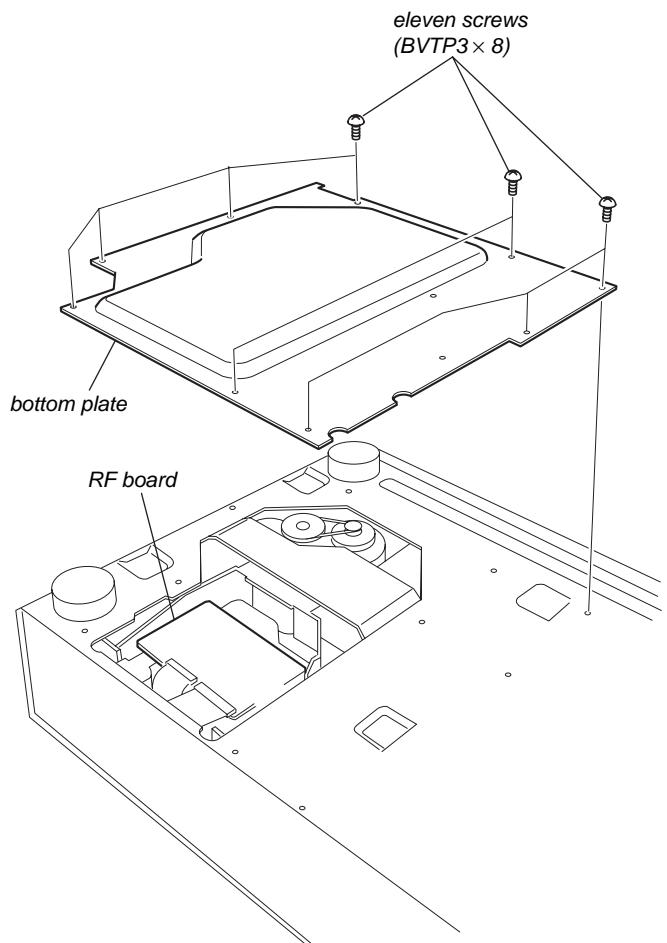

#### **CAUTION**

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

This appliance is classified as a CLASS 1 LASER product. The CLASS 1 LASER PRODUCT MARKING is located on the rear exterior.

When the bottom plate is removed, the RF board can be checked.

#### **LASER DIODE AND FOCUS SEARCH OPERATION CHECK**

Carry out the "S curve check" in "CD section adjustment" and check that the S curve waveform is output three times.

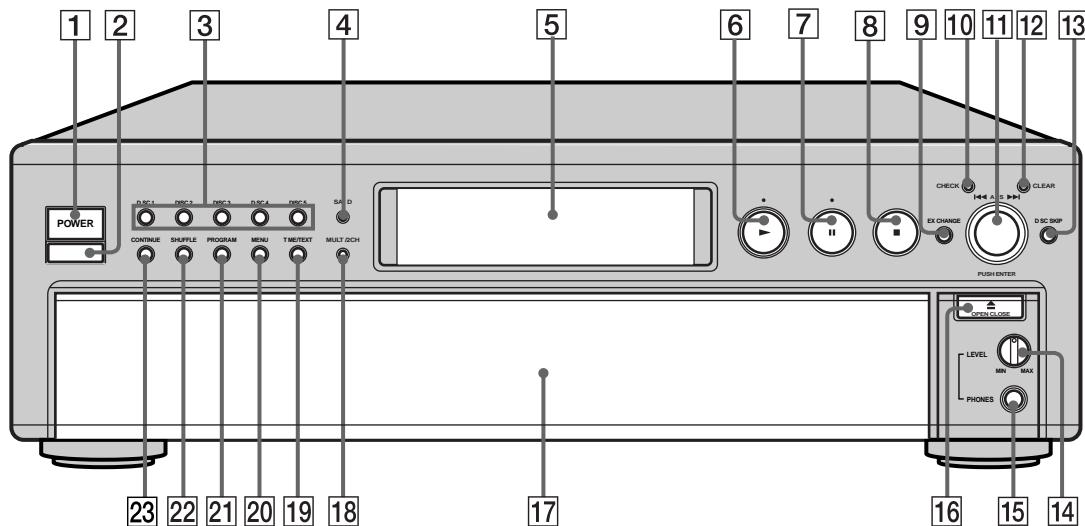

#### **Notes on chip component replacement**

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

#### **Flexible Circuit Board Repairing**

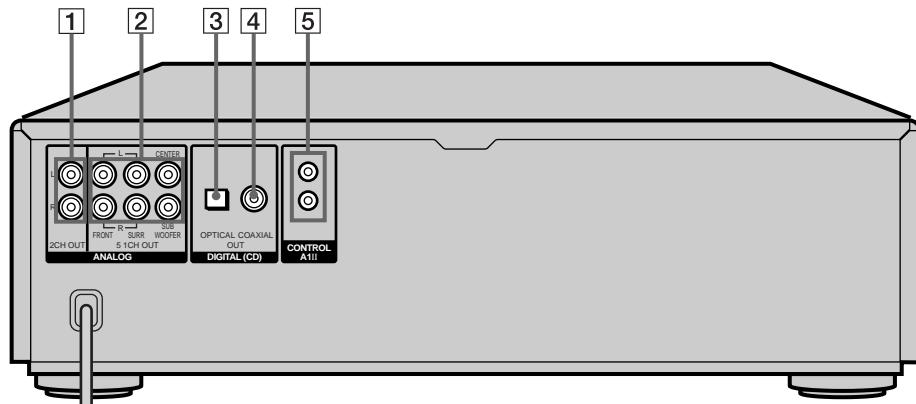

- Keep the temperature of soldering iron around 270°C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

## Front Panel Parts Descriptions

- 1** **POWER switch (14)**  
Press to turn on/off the player.
- 2** **Remote sensor (4)**
- 3** **DISC 1-5 button (14)**  
Press to select the disc.
- 4** **SACD/CD button (with an LED) (14)**  
Each time you press the button while the Hybrid disc (page 13) is loaded, the layer changes between an HD (SACD) layer (the LED turns on) and CD layer (the LED turns off).
- 5** **Display window (15)**  
Shows various information.
- 6** **▶ button (14)**  
Press to start play.  
**▶ indicator**  
Lights up during playback.
- 7** **II button (14)**  
Press to pause play.  
**II indicator**  
Lights up during pause.
- 8** **■ button (14)**  
Press to stop play.
- 9** **EX-CHANGE button (18)**  
Press to replace discs while playing a disc.
- 10** **CHECK button (23)**  
Press to check the programmed order.
- 11** **▲AMS▼ dial (AMS: Automatic Music Sensor) (7, 14)**  
When you turn the ▲AMS▼ dial counterclockwise by one click, you go back to the preceding track; when you turn the ▲AMS▼ dial clockwise by one click, you go to the succeeding track.
- 12** **CLEAR button (23)**  
Press to delete a programmed track number.
- 13** **DISC SKIP button (14)**  
Press to select the disc.
- 14** **PHONES LEVEL control**  
Adjust the headphones volume.
- 15** **PHONES jack**  
Connect the headphones.  
During playback of a Multi-channel Super Audio CD, the same signal that is output from the ANALOG 5.1CH FRONT L/R jacks is output from the PHONES jack.
- 16** **▲ OPEN/CLOSE button (14)**  
Press to open/close the disc tray.
- 17** **Disc tray (14)**  
Press ▲ OPEN/CLOSE to open/close the disc tray.
- 18** **MULTI/2CH button (with an LED) (14)**  
Press to select the playback area when the 2 channel + Multi-channel Super Audio CD is loaded. When you select the Multi-channel playback area (page 13), the LED turns on.
- 19** **TIME/TEXT button (16)**  
Each time you press the button, the playing time of the track, the total remaining time on the disc, or TEXT information appears in the display.
- 20** **MENU button (7)**  
Press to enter the menu.
- 21** **PROGRAM button (23)**  
Press to select Program Play.
- 22** **SHUFFLE button (22)**  
Press to select Shuffle Play.
- 23** **CONTINUE button (14)**  
Press to resume normal play from Shuffle Play or Program Play.

## Rear Panel Parts Descriptions

**[1] ANALOG 2CH OUT L/R jacks (6)**

Connect to an audio component (stereo/2 channel) using the audio connecting cord.

**[2] ANALOG 5.1CH OUT jacks (5)**

Connect to an amplifier equipped with the 5.1CH input jacks (Multi-channel amplifier, AV amplifier, etc.) using the audio connecting cords.

**[3] DIGITAL (CD) OUT OPTICAL connector (7)**

Connect to an audio component using an optical digital cable.

**[4] DIGITAL (CD) OUT COAXIAL connector (7)**

Connect to an audio component using the coaxial digital cable.

**[5] CONTROL A1 II jacks (7, 31)**

Connect to a Sony audio component using the monaural (2P) mini-plug cord.

**Note**

Only the audio signals of the CD can be output from the DIGITAL (CD) OUT connectors shown in [3] and [4]. Those of the Super Audio CD cannot be output through DIGITAL (CD) OUT.

## Remote Parts Descriptions

**[1] CONTINUE button (14)**

Press to resume normal play from Shuffle Play or Program Play.

**SHUFFLE button (22)**

Press to select Shuffle Play.

**PROGRAM button (23)**

Press to select Program Play.

**[2] NAME INPUT button (29)**

Press to enter the name input mode.

**[3] DISC/CAPS button (19, 29)**

Press to select the disc.

Press to select the capital letter in name input mode.

**[4] Number buttons (19)**

Press to enter the track numbers.

**[5] >10 button (19)**

Press to locate a track numbered over 10.

**[6] REPEAT button (21)**

Press repeatedly to play all tracks or only one track on the disc.

**[7] CHECK button (23)**

Press to check the programmed order.

**[8] ▶ button (14)**

Press to start play.

**▶ button (14)**

Press to pause play.

**■ button (14)**

Press to stop play.

**[9] AMS ▲▼/▶◀ (AMS: Automatic Music Sensor) buttons (19)**

Press to locate a specific track.

**[10] ▲▼/▶◀ buttons (20)**

Press to locate a portion you want to play within a track.

**[11] DISC SKIP +/- buttons (14)**

Press to select the disc.

**[12] CD1/2 (COMMAND MODE) switch (7)**

Select the command mode.

**[13] DISPLAY MODE button (16)**

Press to turn off the information.

**[14] SACD/CD button (14)**

Each time you press the button while the Hybrid disc (page 13) is loaded, the layer changes between an HD layer (the SACD/CD LED turns on) and CD layer (the SACD/CD LED turns off).

**[15] MULTI/2CH button (14)**

Press to select the playback area when the 2 channel + Multi-channel Super Audio CD is loaded. When you select the Multi-channel playback area (page 13), the MULTI/2CH LED turns on.

**[16] TIME/TEXT/SPACE button (16, 30)**

Each time you press the button, the playing time of the track, the total remaining time on the disc, or TEXT information appears in the display.  
Press to insert a space in name input mode.

**[17] ENTER button (29)**

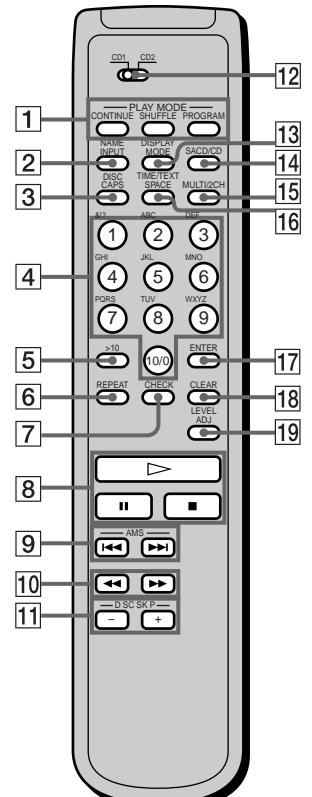

Press to decide the selection.

**[18] CLEAR button (23)**

Press to delete a programmed track number.

**[19] LEVEL ADJ button (26)**

Press to adjust the output level balance for the Multi-channel management function (page 24).

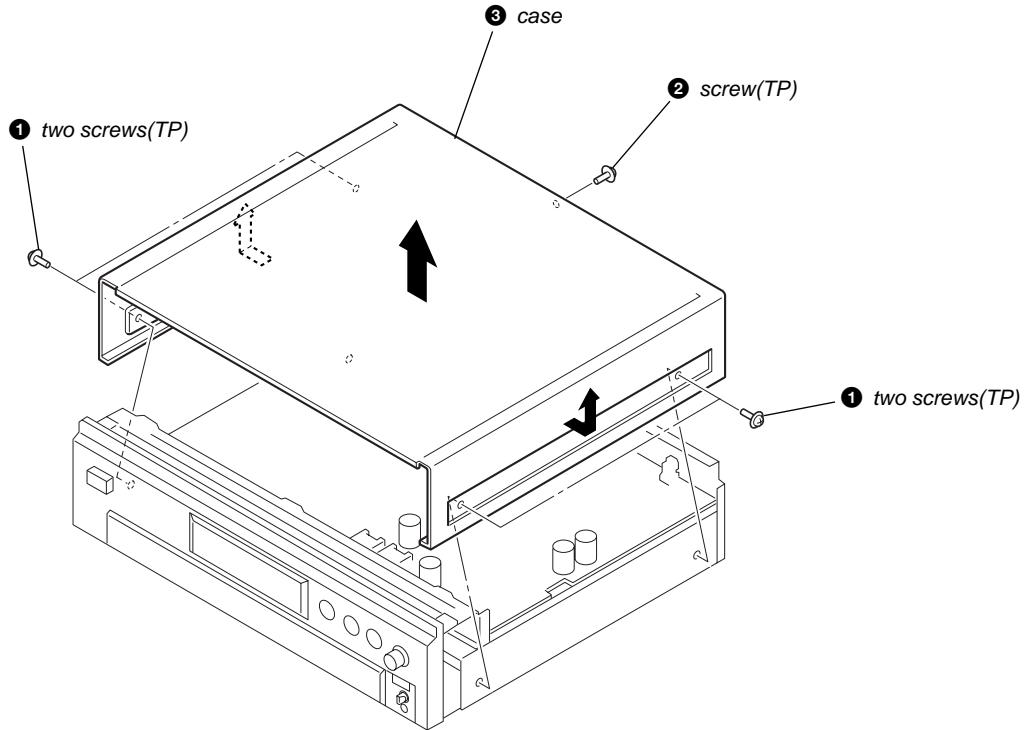

## SECTION 3 DISASSEMBLY

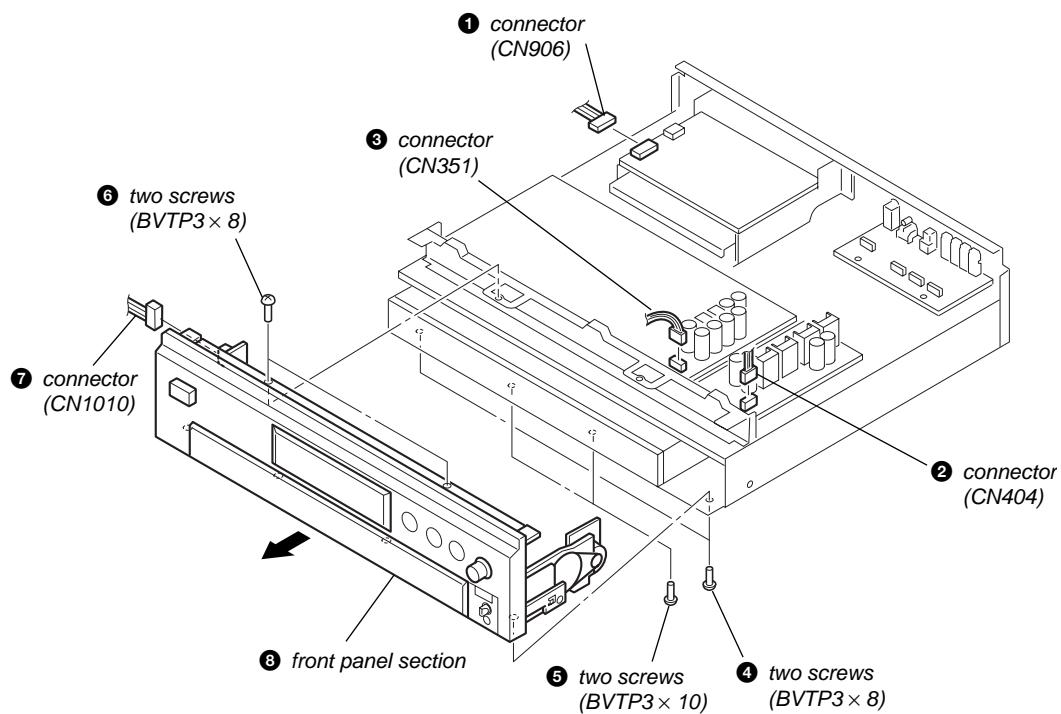

Set → Case → Front panel section → Main board → Audio board → D-Power, I/O board  
 ↗ CD mechanism deck (CDM59-DVBU5) → Optical pick-up block (KHM-230AAA/J1NP) → Table assy  
 ↗ Tray, sensor board → Loading motor board

**Note :** Follow the disassembly procedure in the numerical order given.

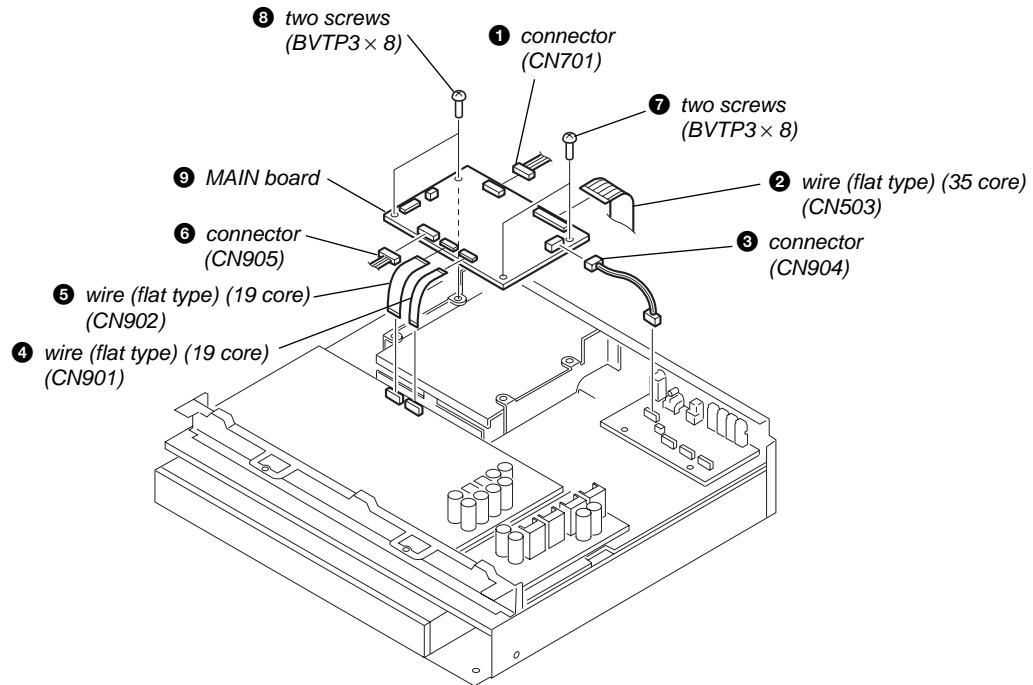

### 3-1. CASE

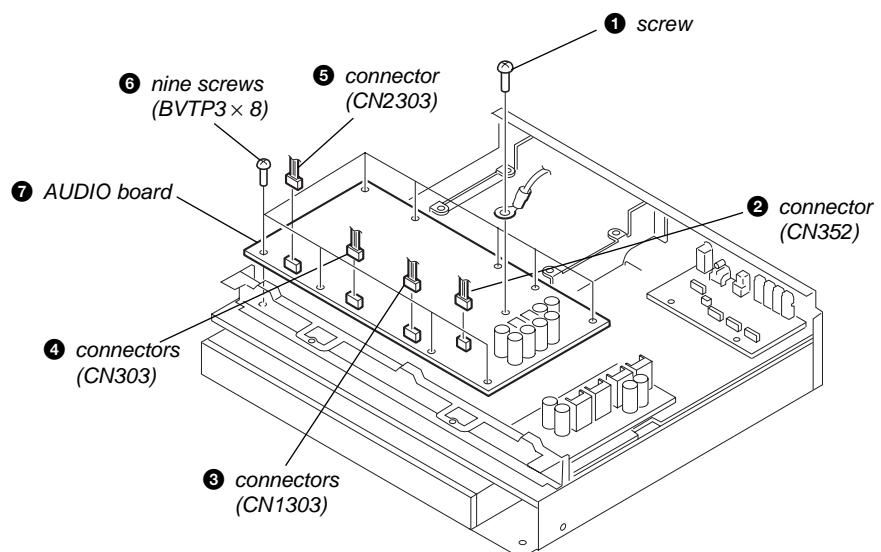

### 3-2. FRONT PANEL SECTION

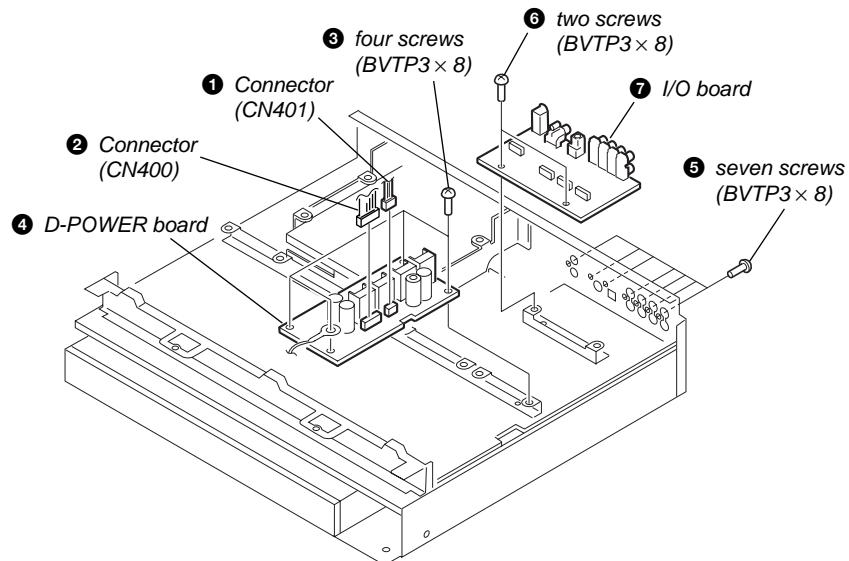

### 3-3. MAIN BOARD

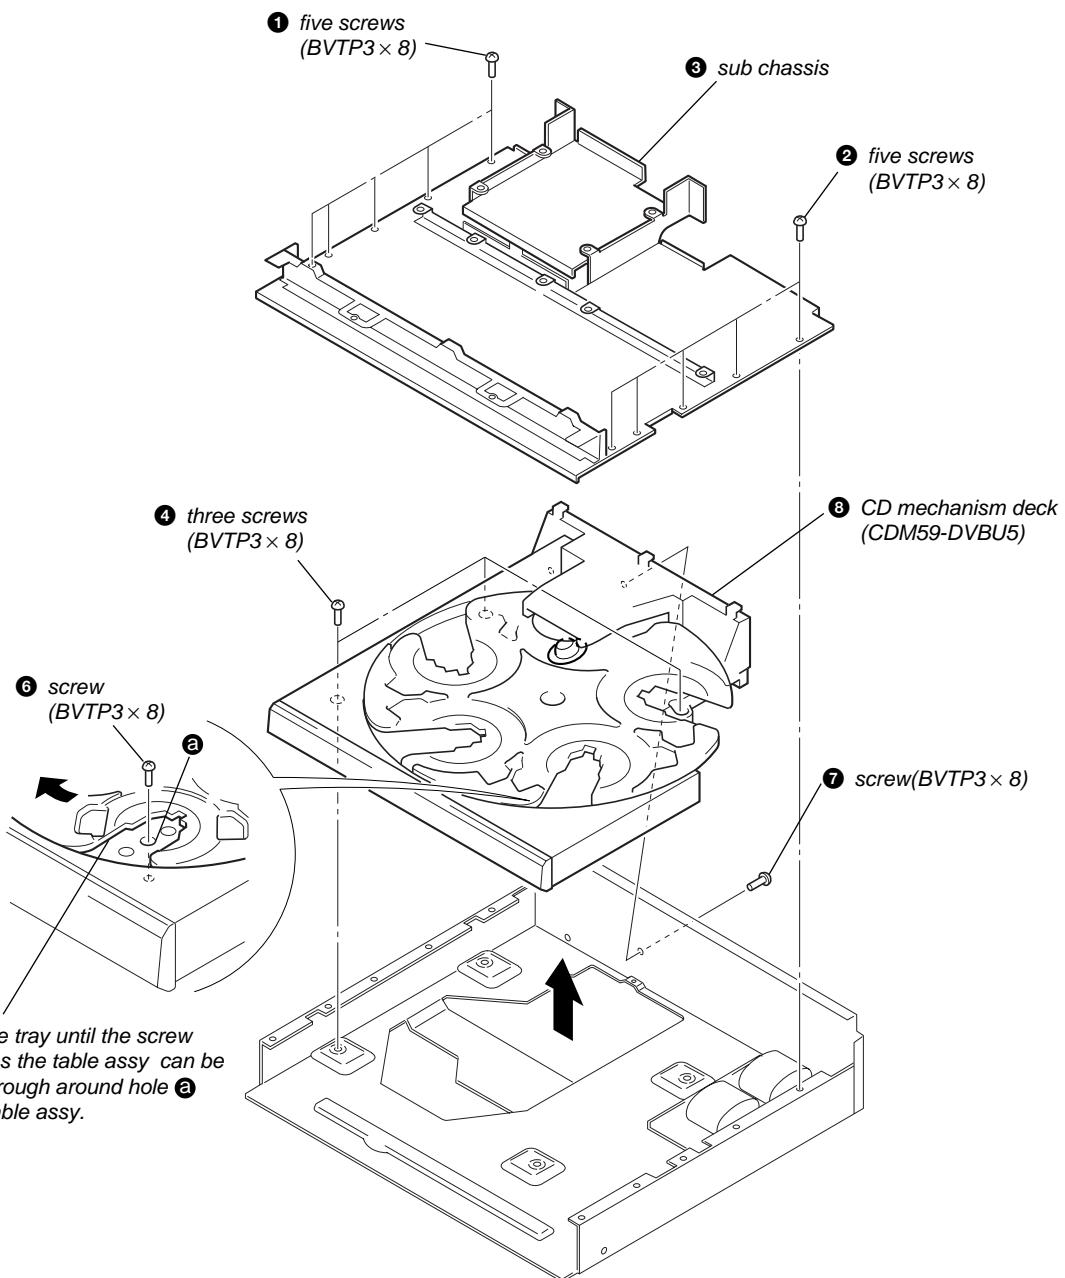

### 3-4. AUDIO BOARD

## 3-5. D-POWER, I/O BOARD

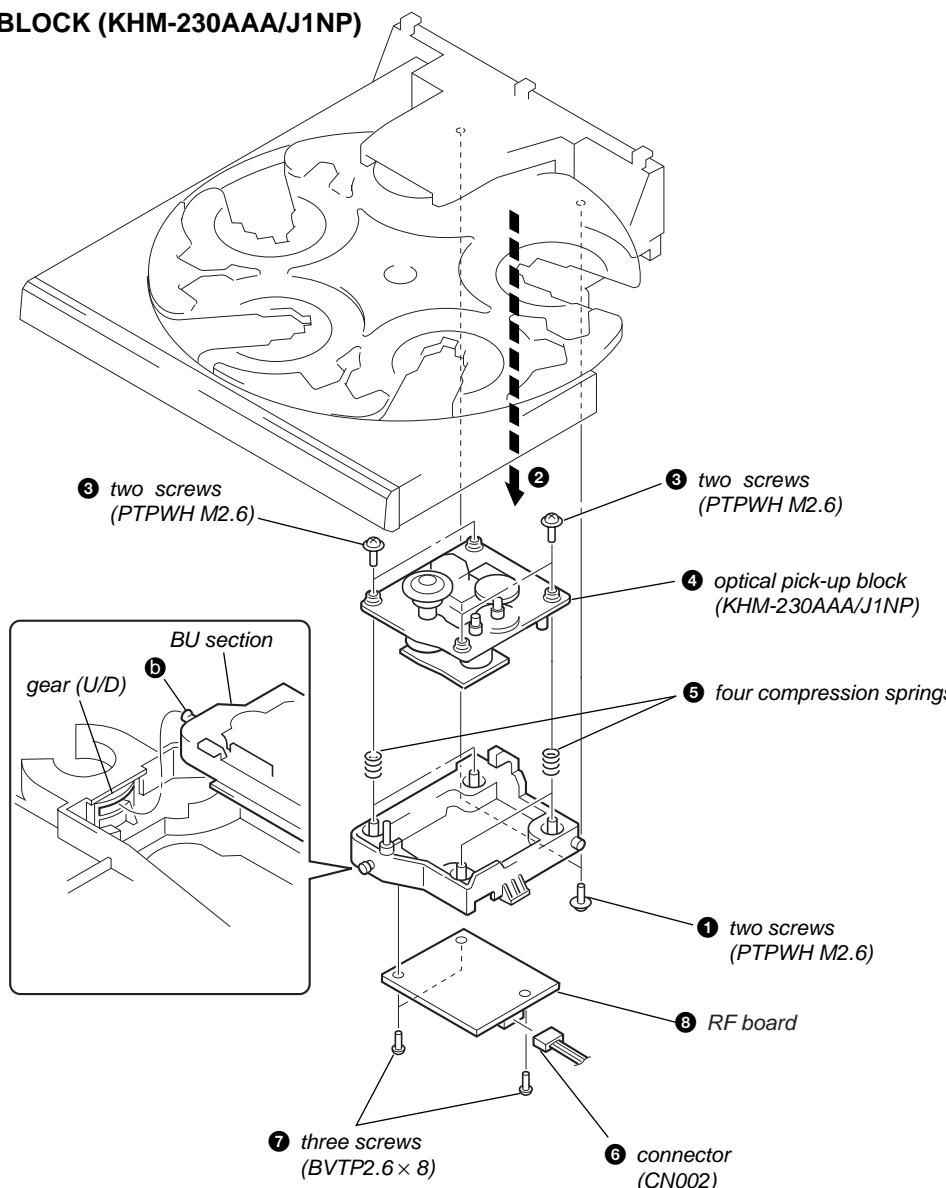

## 3-6. CD MECHANISM DECK (CDM59-DVBU5)

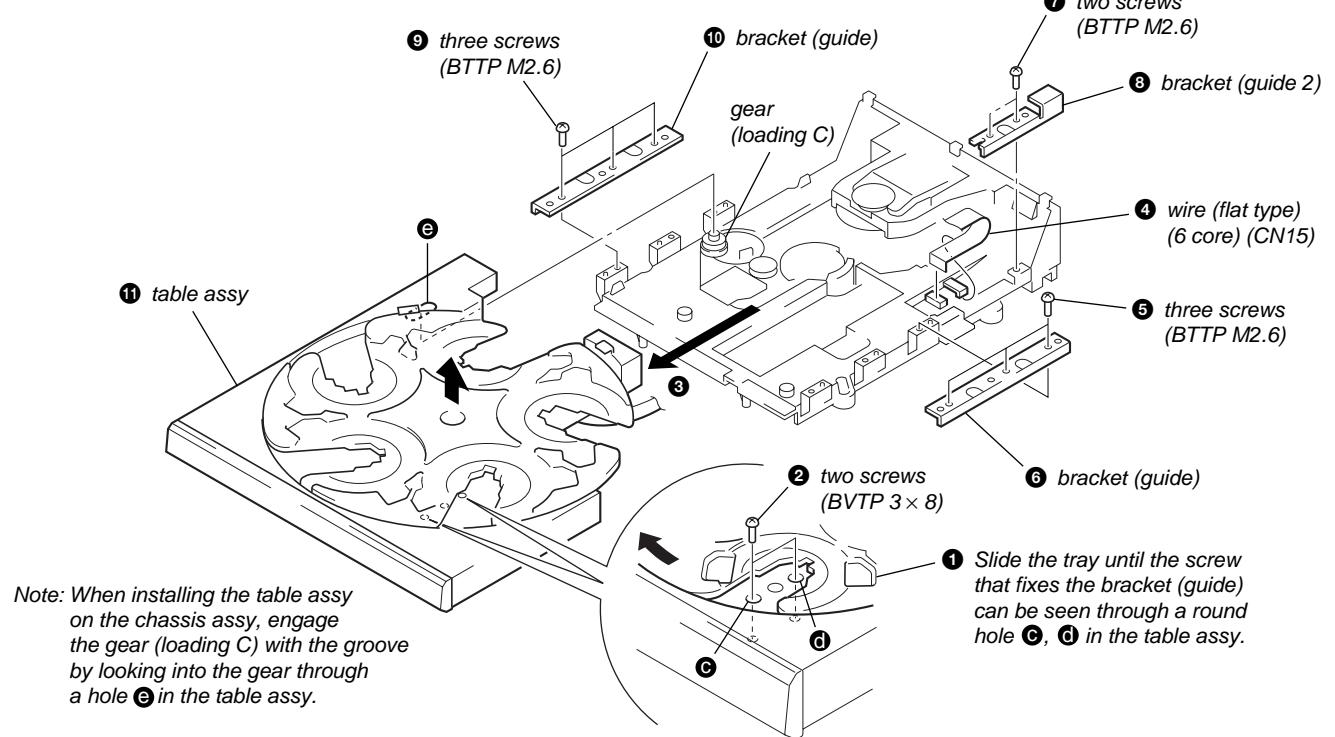

### 3-7. OPTICAL PICK-UP BLOCK (KHM-230AAA/J1NP)

Note: When installing the BU on the chassis, set the lever (lifter) in free position, the gear (U/D) in UP position, and insert the shaft **b** into the groove of gear (U/D).

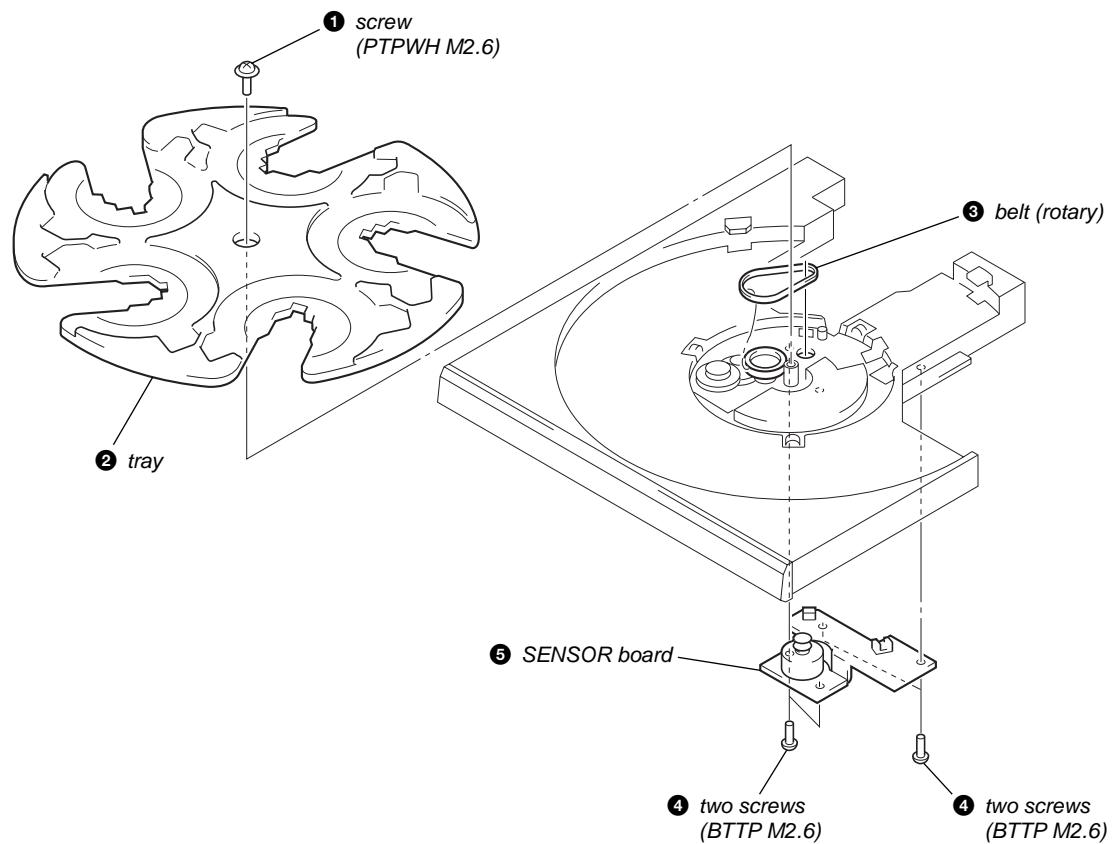

### 3-8. TABLE ASSY

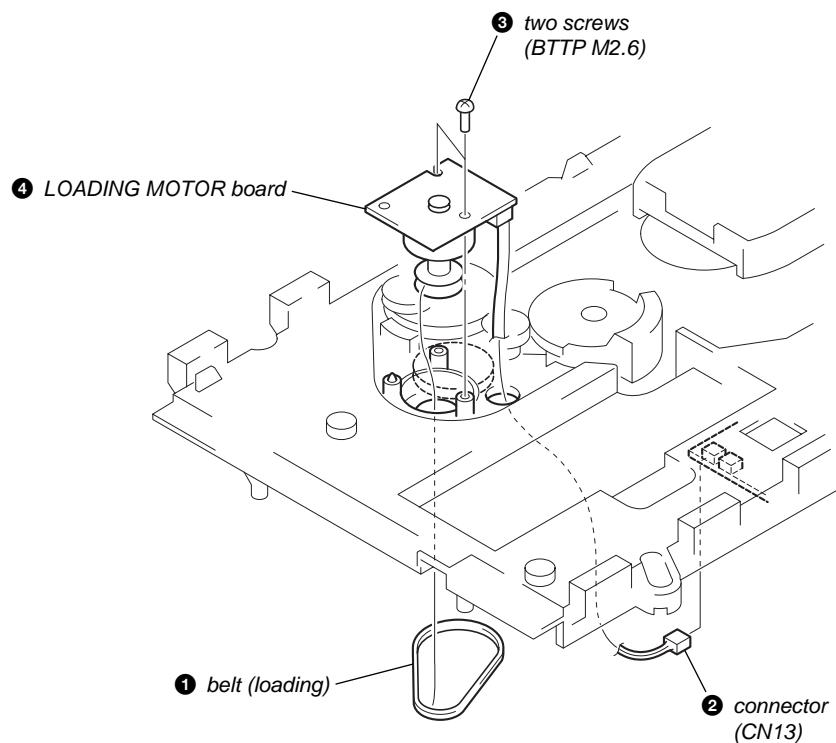

Note: When installing the table assy on the chassis assy, engage the gear (loading C) with the groove by looking into the gear through a hole **e** in the table assy.

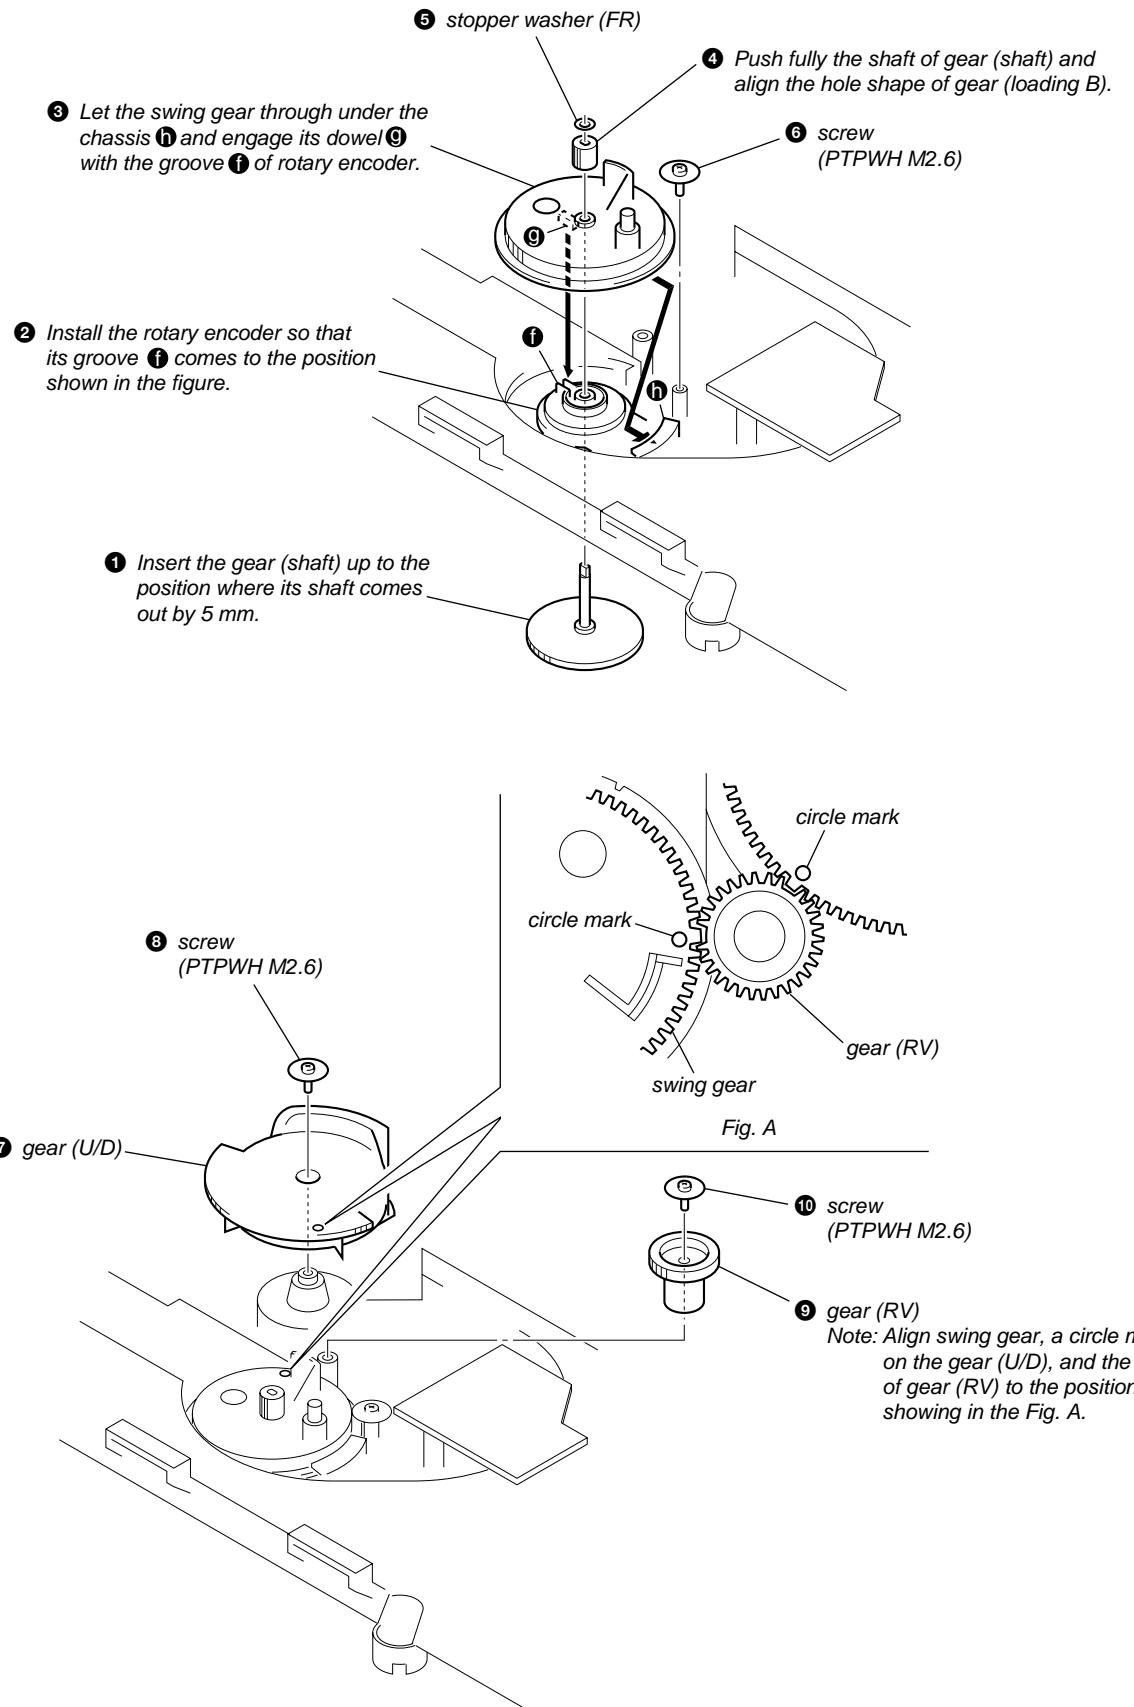

## 3-9. TRAY, SENSOR BOARD

## 3-10. LOADING MOTOR BOARD

### 3-11. ADJUSTING PHASE OF SWING GEAR AND GEAR (U/D)

## SECTION 4 DIAGRAMS

### NOTE FOR PRINTED WIRING BOARDS AND SCHEMATIC DIAGRAMS

**Note on Printed Wiring Board:**

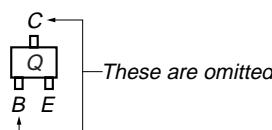

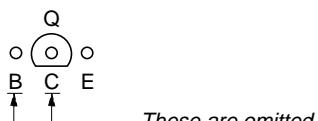

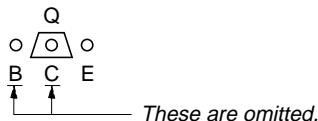

- : parts extracted from the component side.
- : parts extracted from the conductor side.
- : Pattern from the side which enables seeing.

**Caution:**

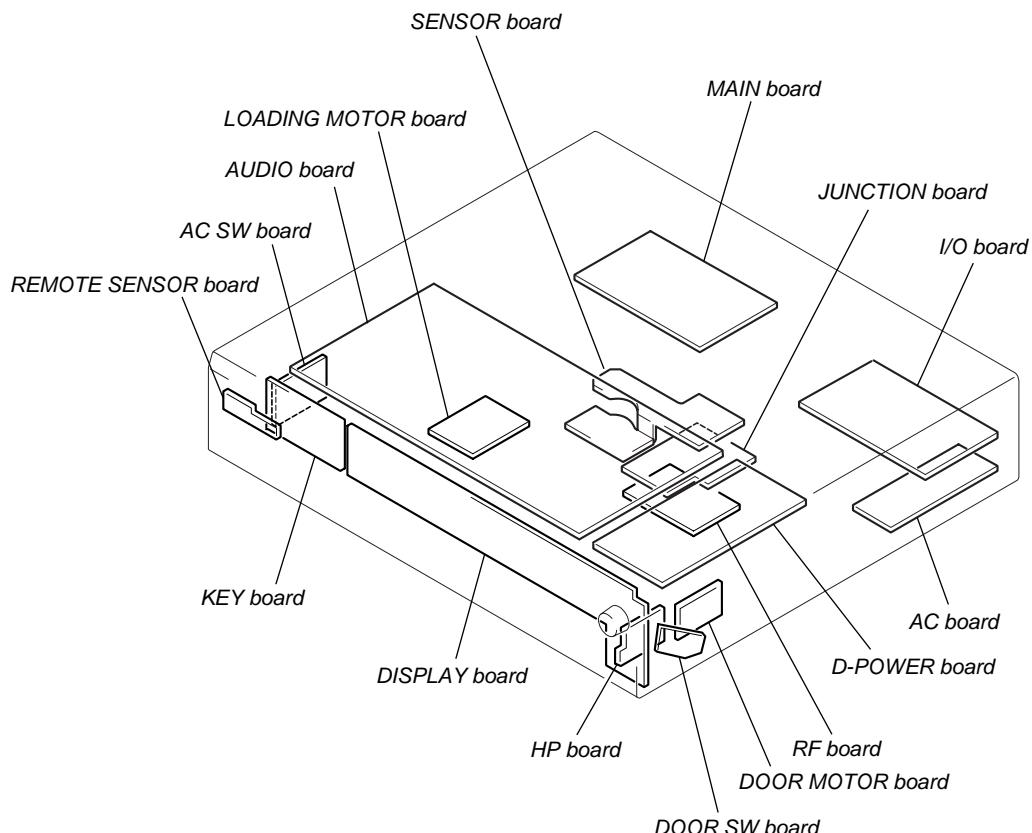

Pattern face side: Parts on the pattern face side seen from the pattern face are indicated.  
(Side A)

Parts face side: Parts on the parts face side seen from the parts face are indicated.  
(Side B)

- Indication of transistor

- Circuit Boards Location

**Note on Schematic Diagram:**

- All capacitors are in  $\mu\text{F}$  unless otherwise noted.  $\text{pF}$ :  $\mu\mu\text{F}$  50 WV or less are not indicated except for electrolytics and tantalums.
- All resistors are in  $\Omega$  and  $1/4\text{W}$  or less unless otherwise specified.
  - : internal component.
  - : panel designation.
  - : fusible resistor.

**Note:**

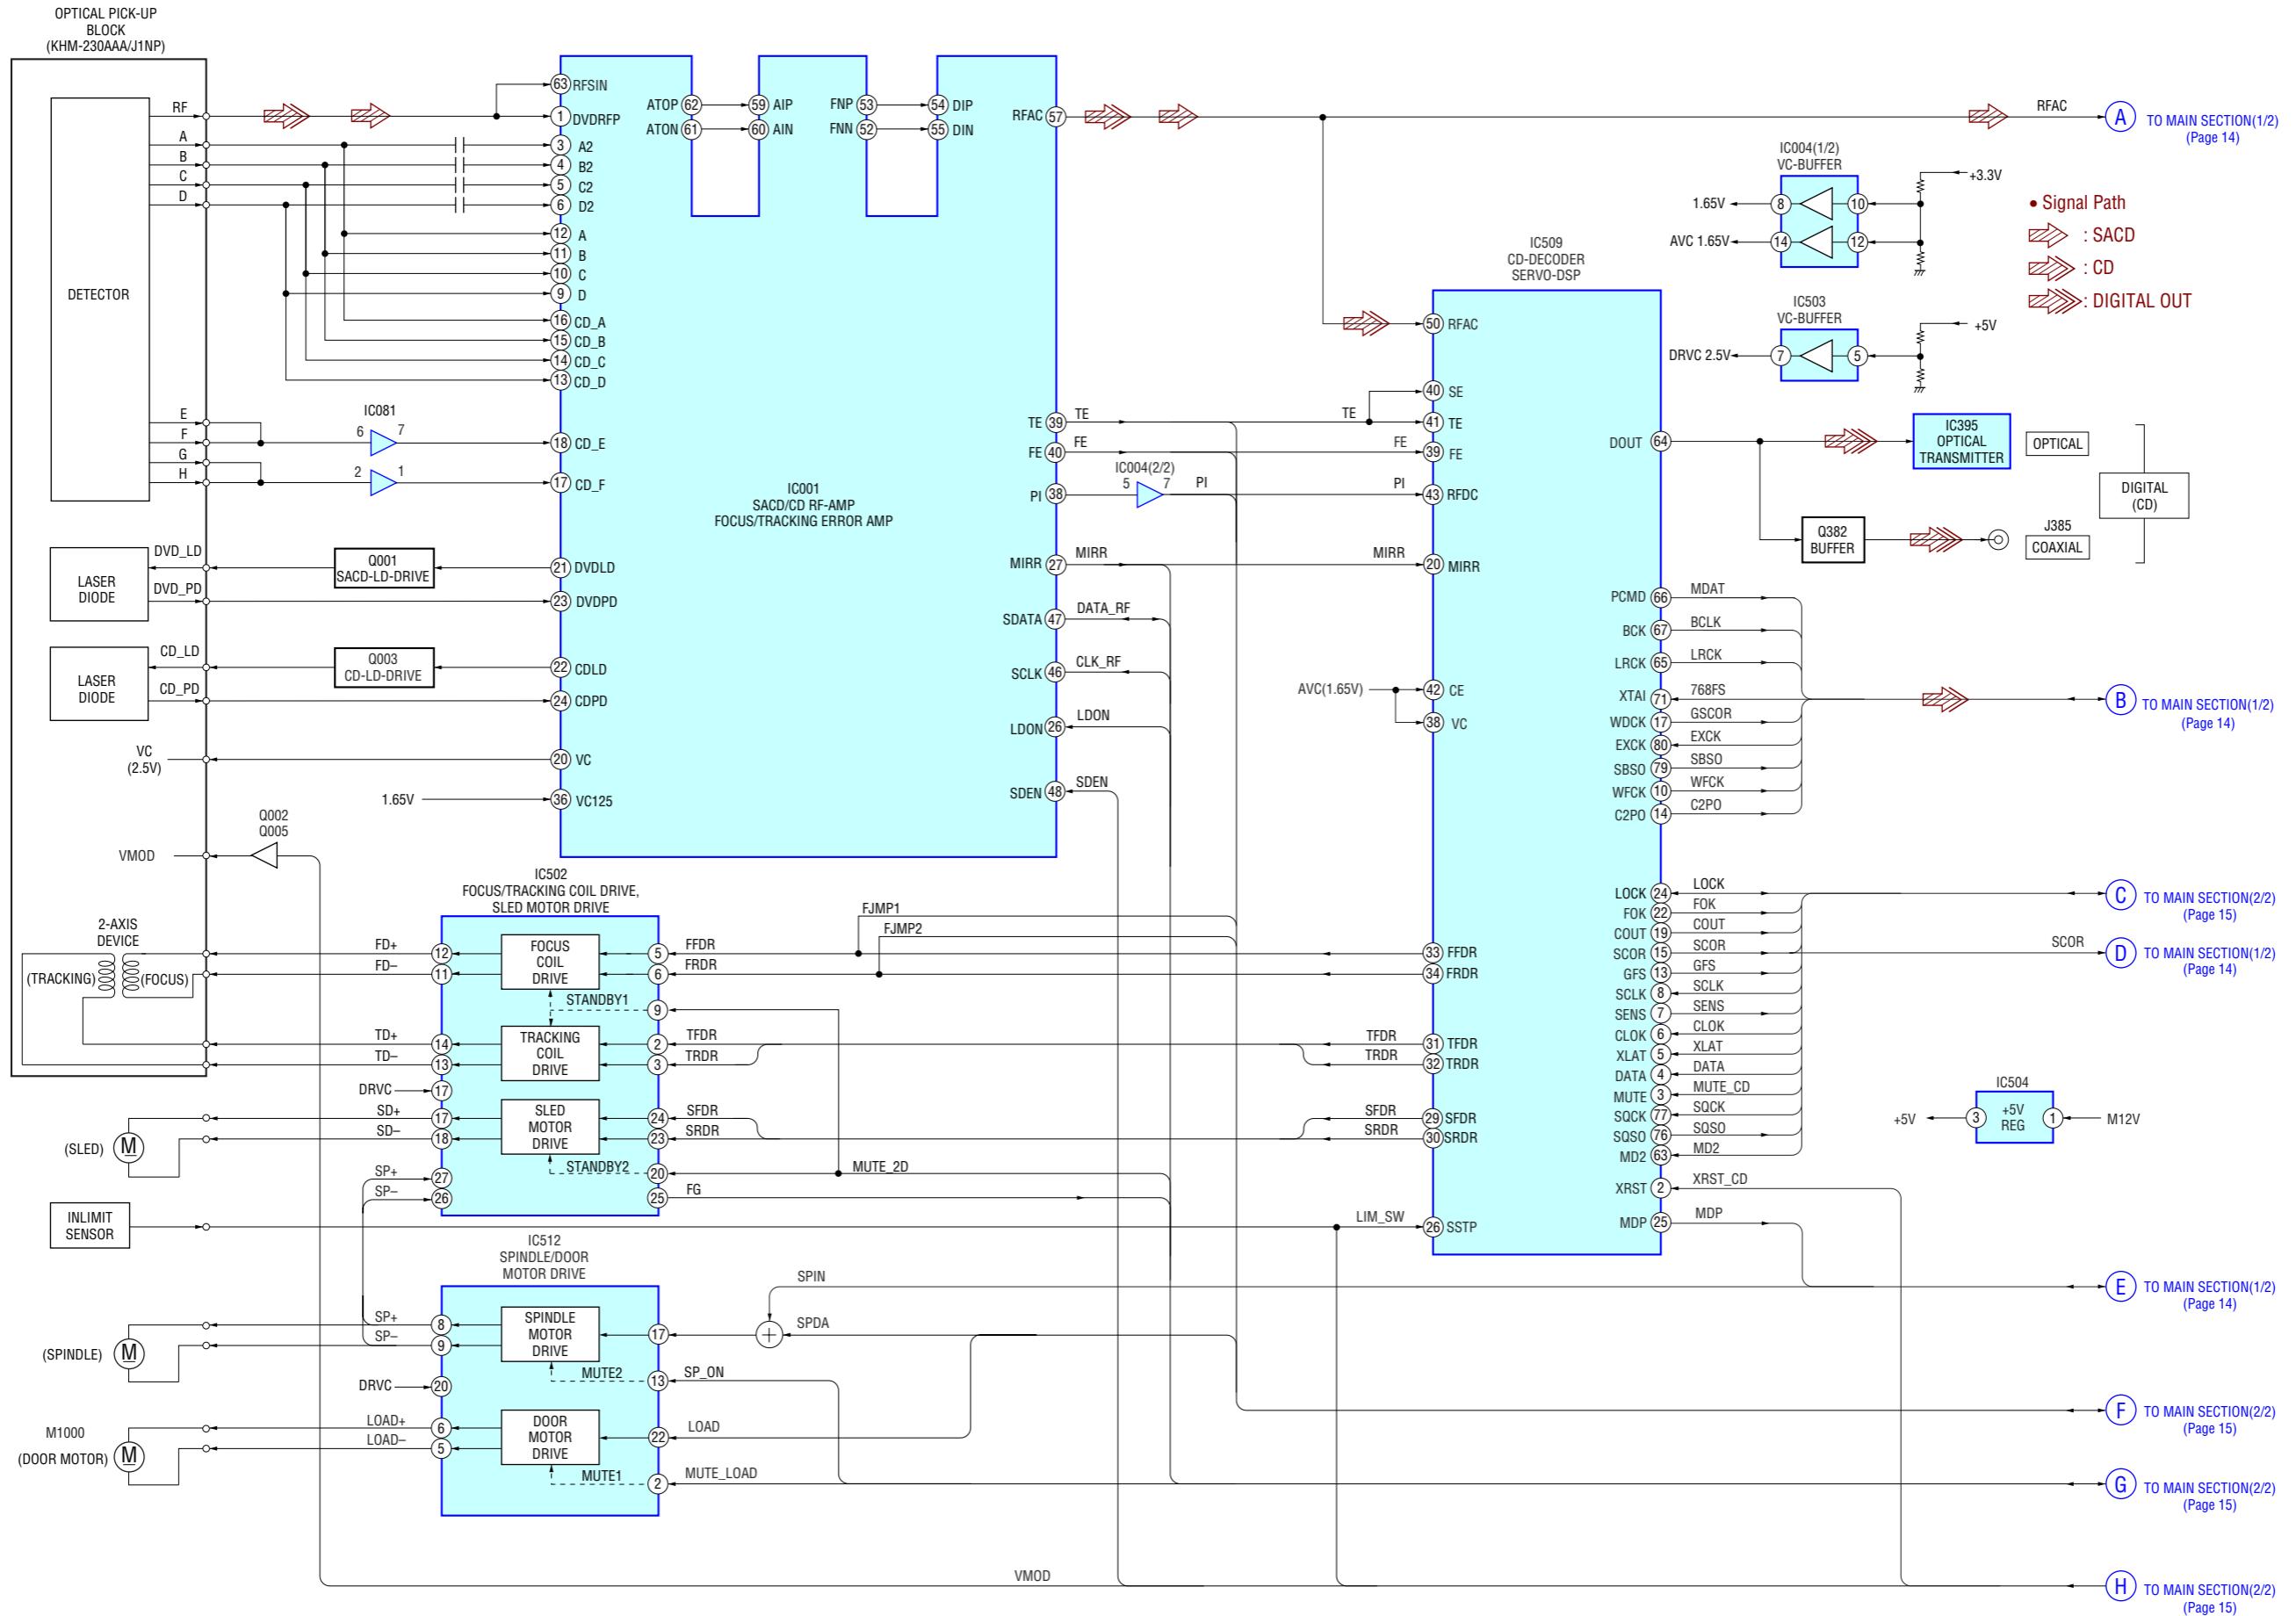

The components identified by mark or dotted line with mark are critical for safety.  
Replace only with part number specified.

**Note:**

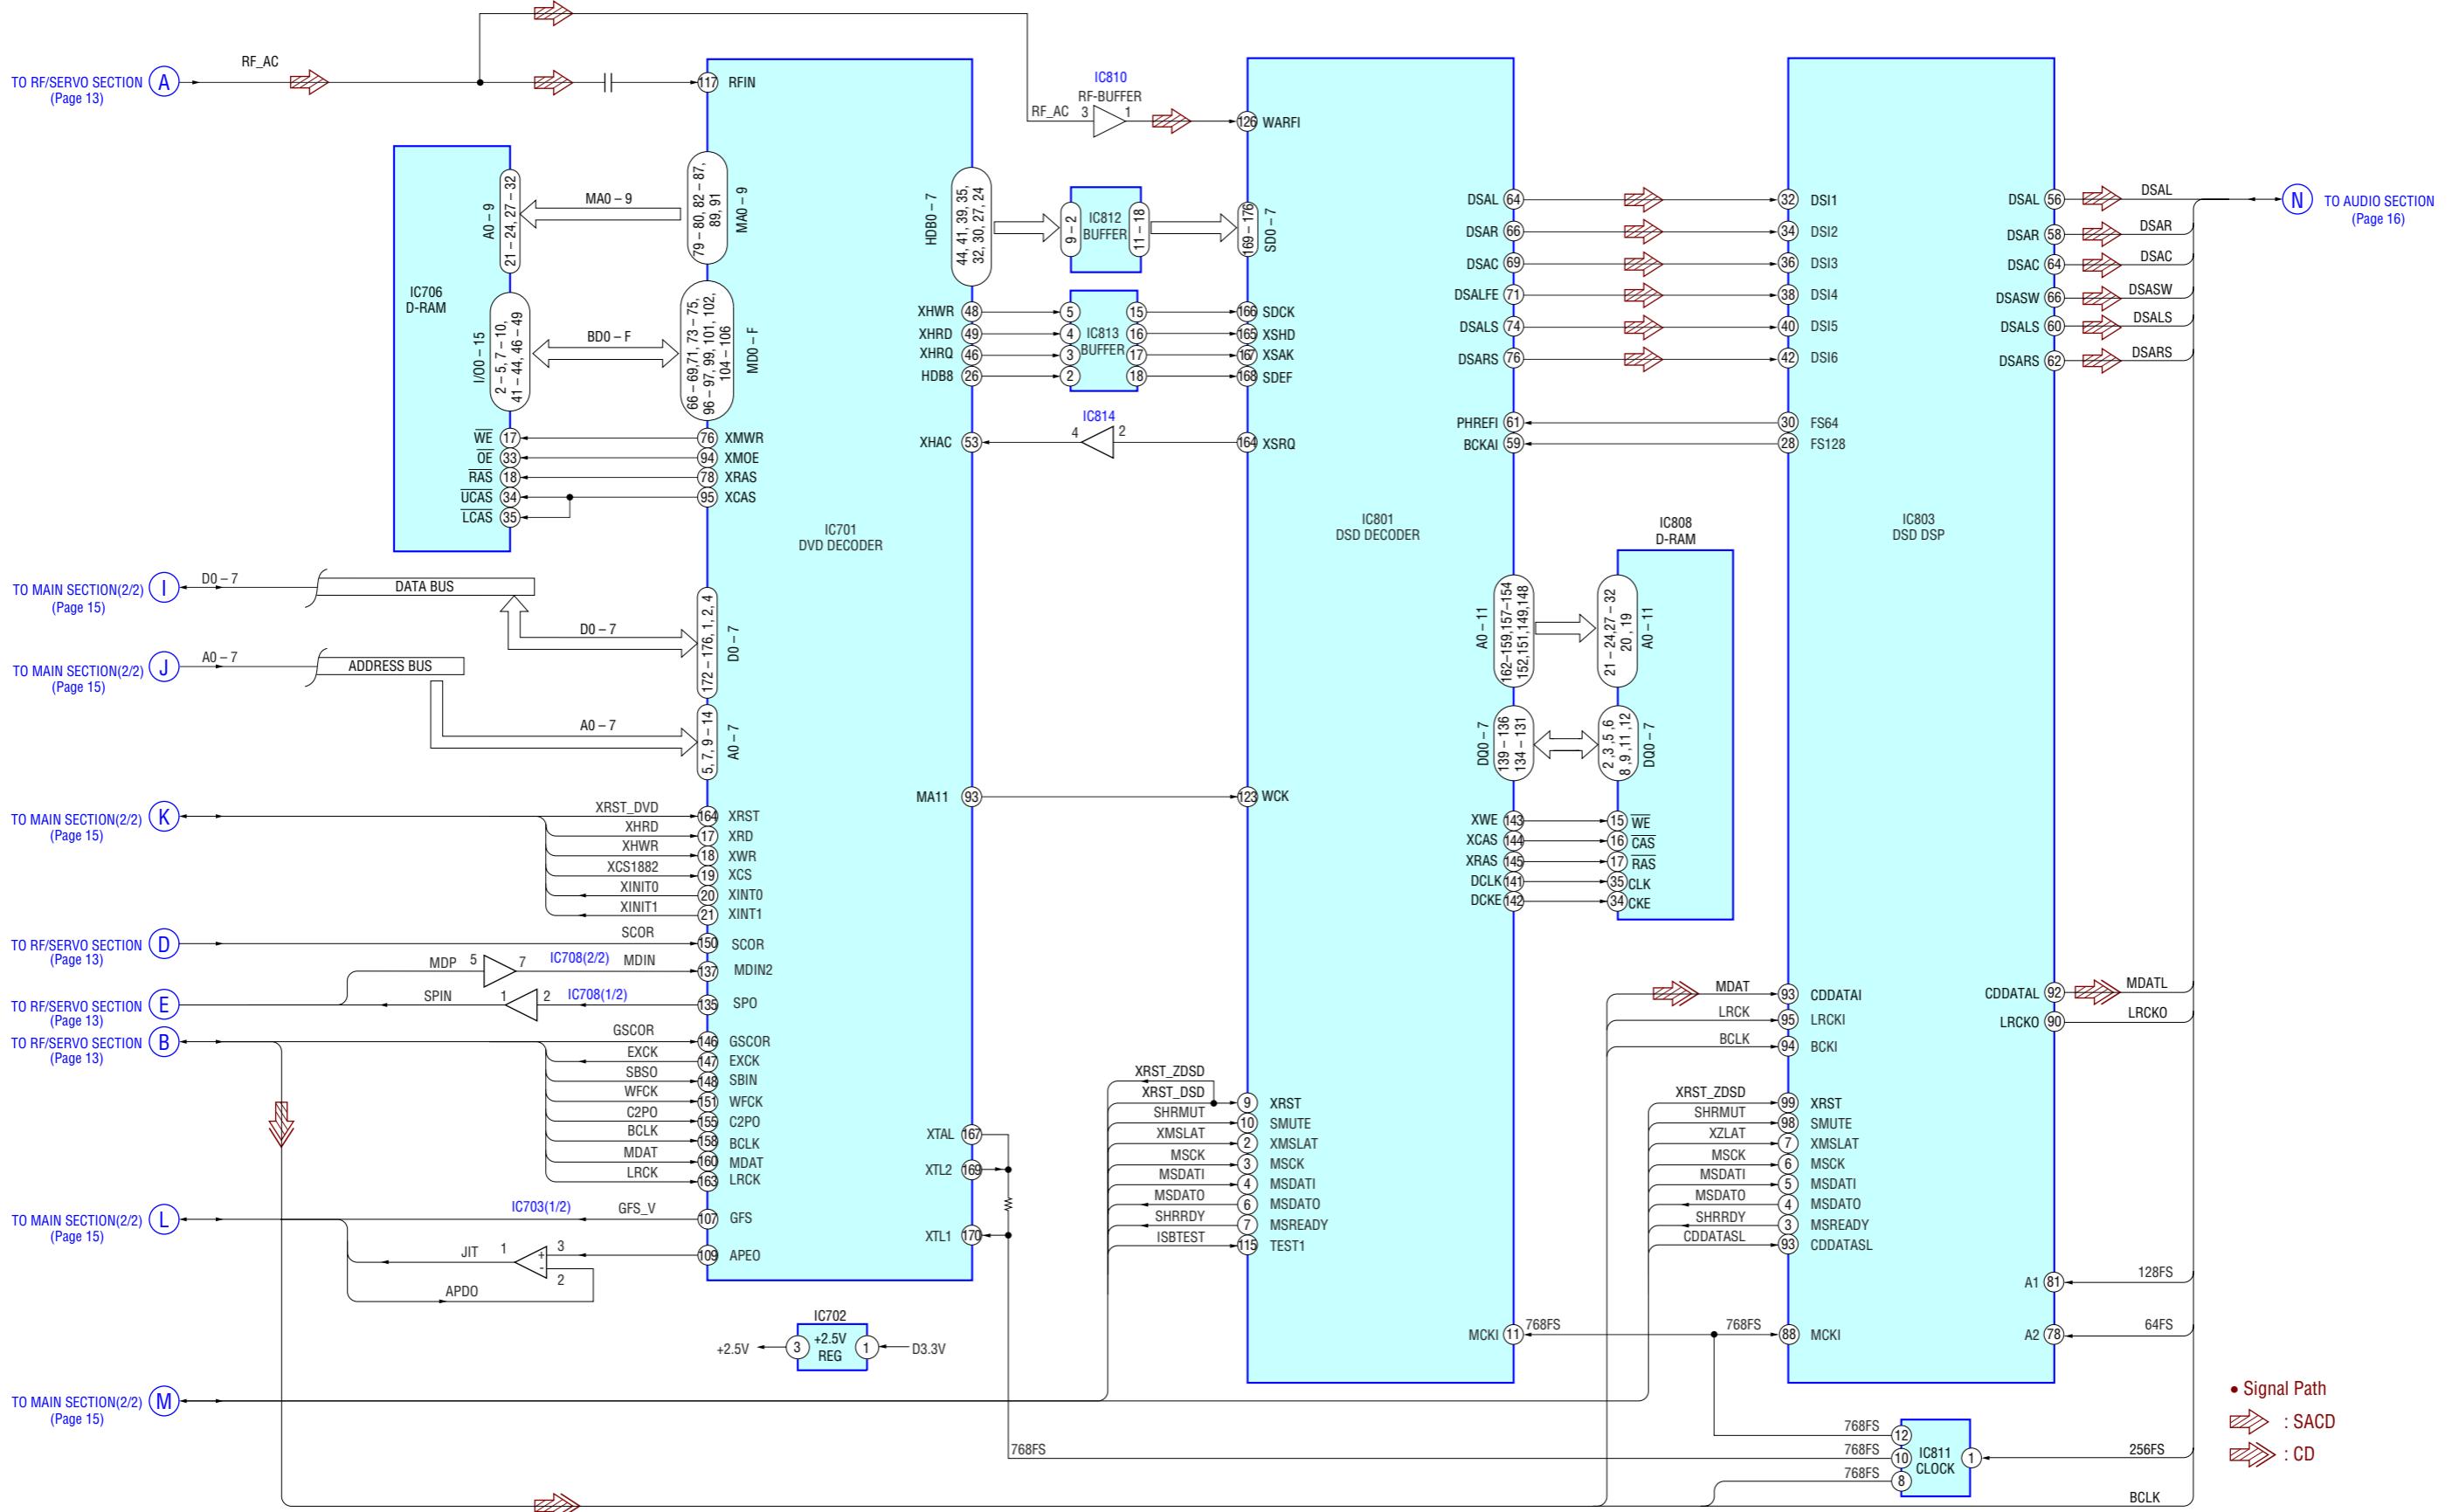

Les composants identifiés par une marque sont critiques pour la sécurité.  
Ne les remplacer que par une pièce portant le numéro spécifié.

- : B+ Line.
- : B- Line.
- Voltages and waveforms are dc with respect to ground under no-signal conditions.  
no mark : CD PLAY
- Voltages are taken with a VOM (Input impedance 10 M $\Omega$ ). Voltage variations may be noted due to normal production tolerances.
- Waveforms are taken with a oscilloscope.  
Voltage variations may be noted due to normal production tolerances.
- Circled numbers refer to waveforms.
- Signal path.  
 : SACD  
 : CD  
 : DIGITAL OUT

Pin No.	Pin Name	I/O	Description
1, 2	D5, D6	I/O	Two-way data bus with the CPU (IC901) and expander (IC902)
3	VSS	—	Ground terminal (digital system)
4	D7	I/O	Two-way data bus with the CPU (IC901) and expander (IC902)
5	A0	I	Address signal input from the CPU (IC901)
6	VDD	—	Power supply terminal (+3.3V) (digital system)
7	A1	I	Address signal input from the CPU (IC901)
8	VDD5V	—	Power supply terminal (+5V)
9 to 14	A2 to A7	I	Address signal input from the CPU (IC901)
15	VSS	—	Ground terminal (digital system)
16	XWAIT	O	Wait signal output terminal Not used (open)
17	XRD	I	Read strobe signal input from the CPU (IC901)
18	XWR	I	Write strobe signal input from the CPU (IC901)
19	XCS	I	Chip select signal input from the CPU (IC901)
20, 21	XINT0, XINT1	O	Interrupt signal output to the CPU (IC901)
22	VDD	—	Power supply terminal (+3.3V) (digital system)
23	XHRS	I	Not used (open)
24	HDB7	O	Stream data signal output to the DSD decoder (IC801)
25	VSS	—	Ground terminal (digital system)
26	HDB8	O	Error flag signal output to the DSD decoder (IC801)
27	HDB6	O	Stream data signal output to the DSD decoder (IC801)
28	VDDS	—	Power supply terminal (+5V) (digital system)
29	HDB9	O	Not used (open)
30	HDB5	O	Stream data signal output to the DSD decoder (IC801)
31	HDBA	O	Not used (open)
32	HDB4	O	Stream data signal output to the DSD decoder (IC801)
33	VSS	—	Ground terminal (digital system)
34	HDBB	O	Not used (open)
35	HDB3	O	Stream data signal output to the DSD decoder (IC801)
36	VDD	—	Power supply terminal (+3.3V) (digital system)
37	HDBC	O	Not used (open)
38	VDDS	—	Power supply terminal (+5V) (digital system)
39	HDB2	O	Stream data signal output to the DSD decoder (IC801)
40	HDBD	O	Not used (open)
41	HDB1	O	Stream data signal output to the DSD decoder (IC801)
42	VSS	—	Ground terminal (digital system)
43	HDBE	O	Not used (open)
44	HDB0	O	Stream data signal output to the DSD decoder (IC801)
45	HDBF	O	Not used (open)
46	XACK	O	Serial data transfer acknowledge signal output to the DSD decoder (IC801)
47	VDDS	—	Power supply terminal (+5V) (digital system)
48	DCK	O	Serial data transfer clock signal output to the DSD decoder (IC801)
49	XSHDR0	O	Header flag signal output to the DSD decoder (IC801)
50	VDD	—	Power supply terminal (+3.3V) (digital system)
51	REDY	O	Not used (pull up)
52	VSS	—	Ground terminal (digital system)
53	REQUEST	I	Serial data transfer request signal input from the DSD decoder (IC801)
54	HINT	O	Not used (pull up)
55	XS16	O	Not used (pull up)
56	HA1	I	Not used (fixed at "H")
57	XPDI	I/O	Not used (pull up)
58	VDDS	—	Power supply terminal (+5V) (digital system)
59, 60	HA0, HA2	I	Not used (fixed at "H")

Pin No.	Pin Name	I/O	Description
61	VSS	—	Ground terminal (digital system)
62, 63	HCS0, HCS1	I	Not used (open)
64	VDD	—	Power supply terminal (+3.3V) (digital system)
65	DASP	I/O	Not used (pull up)
66 to 69	MDB0 to MDB3	I/O	Two-way data bus with the D-RAM (IC706)
70	VSS	—	Ground terminal (digital system)
71	MDB4	I/O	Two-way data bus with the D-RAM (IC706)
72	VDD5V	—	Power supply terminal (+5V)
73 to 75	MDB5 to MDB7	I/O	Two-way data bus with the D-RAM (IC706)
76	XMWR	O	Write enable signal output to the D-RAM (IC706)
77	VDD	—	Power supply terminal (+3.3V) (digital system)
78	XRAS	O	Row address strobe signal output to the D-RAM (IC706)
79, 80	MA0, MA1	O	Address signal output to the D-RAM (IC706)
81	VSS	—	Ground terminal (digital system)
82 to 87	MA2 to MA7	O	Address signal output to the D-RAM (IC706)
88	VDD	—	Power supply terminal (+3.3V) (digital system)
89	MA8	O	Address signal output to the D-RAM (IC706)
90	VSS	—	Ground terminal (digital system)
91	MA9/MNT0	O	Address signal output to the D-RAM (IC706)
92	MA10/MNT1	O	RF data signal output terminal for disc mark detection
93	MA11/MNT2	O	Clock signal output terminal for disc mark detection Monitor signal output to the CPU (IC901)
94	XMOE	O	Output enable signal output to the D-RAM (IC706)
95	XCAS	O	Column address strobe signal output to the D-RAM (IC706)
96, 97	MDB8, MDB9	I/O	Two-way data bus with the D-RAM (IC706)
98	VSS	—	Ground terminal (digital system)
99	MDBA	I/O	Two-way data bus with the D-RAM (IC706)
100	VDD	—	Power supply terminal (+3.3V) (digital system)
101, 102	MDBB, MDBC	I/O	Two-way data bus with the D-RAM (IC706)
103	VDD5V	—	Power supply terminal (+5V)
104 to 106	MDBD to MDBF	I/O	Two-way data bus with the D-RAM (IC706)
107	GFS	O	Guard frame sync signal output to the CPU (IC901)
108	VSS	—	Ground terminal (digital system)
109	APEO	O	Absolute phase error signal output
110	VDD	—	Power supply terminal (+3.3V) (digital system)
111	DASYO	O	RF binary signal output
112	GNDA5	—	Ground terminal (analog system)
113, 114	ASF1, AFS2	—	Filter connected terminal for selection the constant asymmetry compensation
115	DASYI	I	Analog signal input after integrated from the RF binary signal
116	RFDCC	I	Input terminal for adjusting DC cut high-pass filter for RF signal
117	RF IN	I	RF signal input from the CXD1881R (IC001)
118, 119	VCCA5, VCCA4	—	Power supply terminal (+3.3V) (analog system)
120	VCOR1	—	VCO oscillating range setting resistor connected terminal
121	VCOIN	I	VCO input terminal
122, 123	GNDA4, GNDA3	—	Ground terminal (analog system)
124	LPF5	O	Signal output from the operation amplifier from PLL loop filter
125	VC1	I	Middle point voltage (+1.65V) input terminal
126, 127	LPF2, LPF1	I	Inverted signal input to the operation amplifier from PLL loop filter
128, 129	VCCA3, VCCA2	—	Power supply terminal (+3.3V) (analog system)
130	PDO	O	Signal output from the charge pump for phase comparator
131	PDHVCC	I	Middle point voltage input terminal for RF PLL

# SCD-C555ES

Pin No.	Pin Name	I/O	Description
132	FDO	O	Signal output from the charge pump for frequency comparator
133, 134	GNDA2, GNDA1	—	Ground terminal (analog system)
135	SPO	O	Spindle motor (M3) control signal output to the BA5912AFP (IC512)
136	VC2	I	Middle point voltage (+1.65V) input terminal
137	MDIN2	I	Spindle motor (M3) control signal input from the CXD3008Q (IC509)
138	MDIN1	I	MDP input terminal
139	VCCA1	—	Power supply terminal (+3.3V) (analog system)
140	CLVS	O	Control signal output for selection the spindle control filter at CLVS
141	VSS	—	Ground terminal (digital system)
142	MDSOUT	O	Frequency error output terminal of internal CLV circuit
143	VDD	—	Power supply terminal (+3.3V) (digital system)
144	MDPOUT	O	Phase error output terminal of internal CLV circuit
145	DEFECT	I	Defect signal input terminal Not used (fixed at “L”)
146	GSCOR	I	Guard subcode sync OR signal input from the CXD3008Q (IC509)
147	EXCK	O	Subcode serial data reading clock signal output to the CXD3008Q (IC509)
148	SBIN	I	Subcode serial data input from the CXD3008Q (IC509)
149	VSS	—	Ground terminal (digital system)
150	SCOR	I	Subcode sync OR signal input from the CXD3008Q (IC509)
151	WFCK	I	Write frame clock signal input from the CXD3008Q (IC509)
152	VDD5V	—	Power supply terminal (+5V)
153	XRCI	I	RAM overflow signal input terminal Not used (fixed at “L”)
154	VDDS	—	Power supply terminal (+5V) (digital system)
155	C2PO	I	C2 pointer signal input from the CXD3008Q (IC509)
156	VDD	—	Power supply terminal (+3.3V) (digital system)
157	DBCK	O	Bit clock signal (2.8224 MHz) output terminal Not used (open)
158	BCLK	I	Bit clock signal (2.8224 MHz) input from the CXD3008Q (IC509)
159	DDAT	O	PCM data output terminal Not used (open)
160	MDAT	I	Serial data input from the CXD3008Q (IC509)
161	VSS	—	Ground terminal (digital system)
162	DLRC	O	L/R sampling clock signal (44.1 kHz) output terminal Not used (open)
163	LRCK	I	L/R sampling clock signal (44.1 kHz) input from the CXD3008Q (IC509)
164	XRST	I	Reset signal input from the expander (IC902) “L”: reset
165	IFS0	I	Interface select signal input terminal Fixed at “L” in this set
166	IFS1	I	Interface select signal input terminal Fixed at “H” in this set
167	XTAL	I	33.86688 MHz clock signal input terminal
168	VSS	—	Ground terminal (digital system)
169	XTA2	O	System clock output terminal (33.86688 MHz)
170	XTA1	I	System clock input terminal (33.86688 MHz)
171	VDD	—	Power supply terminal (+3.3V) (digital system)
172 to 176	D0 to D4	I/O	Two-way data bus with the CPU (IC901) and expander (IC902)

• MAIN BOARD IC801 CXD2752R (DSP DECODER)

Pin No.	Pin Name	I/O	Description
1	VSC	—	Ground terminal for core.
2	XMSLAT	I	Latch input terminal for microcomputer serial communication. Latches address and data at falling this signal.
3	MSCK	I	Shift clock input terminal for microcomputer serial communication. Reads and shifts serial input data at the rise-up of the clock that is input into this terminal. When reading out, read data changes at falling of clock that inputs into this terminal.
4	MSDATI	I	Data input terminal for microcomputer serial communication. Inputs data and address with serial from microcomputer.
5	VDC	—	Power terminal for core. Supply +2.5 V.
6	MSDATA	O	Date output terminal for microcomputer serial communication. Hi-Z excluding output.
7	MSREADY	O	Output ready flag for microcomputer serial communication. When completing, outputs "L". Open drain.
8	XMSDOE	O	Output enable terminal for microcomputer serial communication. When using tri-state buffer externally, activates by this terminal. When outputs "MSDATA", "L" is shown.
9	XRST	I	Reset terminal. Resets entire IC on "L". Clock that is output from EXCK01, EXCK02 and LRCK of output terminal, doesn't stop in resetting.
10	SMUTE	I	Soft mute terminal. Soft-mutes audio output with "H" and releases it with "L".
11	MCKI	I	Master clock input terminal. Inputs clock with 768 Fs (33.8688 MHz).
12	VSIO	—	Ground terminal for input and output.
13	EXCK01	O	External output clock terminal 1. Upon setting, outputs 768 Fs, 512 Fs, 256 Fs and 128Fs.
14	EXCK02	O	External output clock terminal 2. Upon setting, outputs 768 Fs, 512 Fs, 256 Fs and 128Fs.
15	LRCK	O	1Fs(44.1kHz) clock output terminal.
16	FRAME	O	Frame signal output terminal.
17	VDIO	—	Power terminal for input and output. Supply +3.3 V.
18	MNT0	O	Monitor output terminal. Upon setting of microcomputer, outputs a part of internal operation.
19	MNT1	O	Monitor output terminal. Upon setting of microcomputer, outputs a part of internal operation.
20	MNT2	O	Monitor output terminal. Upon setting of microcomputer, outputs a part of internal operation.
21	MNT3	O	Monitor output terminal. Upon setting of microcomputer, outputs a part of internal operation.
22	TESTO	O	Output terminal for testing. Keep open.
23	TESTO	O	Output terminal for testing. Keep open.
24	TESTO	O	Output terminal for testing. Keep open.
25	TESTO	O	Output terminal for testing. Keep open.
26	TCK	I	Clock input terminal for testing. Fix "L".
27	TDI	Ipu	Input terminal for testing (pull-up). Keep open.
28	VSC	—	Ground terminal for core.
29	TDO	O	Output terminal for testing. Keep open.
30	TMS	Ipu	Input terminal for testing (pull-up). Keep open.
31	TRST	Ipu	Reset terminal for testing (pull-up). Input "power-on" reset signal or fix "L".
32	TEST1	I	Input terminal for testing. Fix "L".
33	TEST2	I	Input terminal for testing. Fix "L".
34	TEST3	I	Input terminal for testing. Fix "L".
35	VDC	—	Power terminal for core. Supply +2.5 V.
36	TESTO	O	Output terminal for testing. Keep open.
37	XBIT	O	Monitor terminal for DST related. Nothing is connected. For details, refer to part 3 DST_X_Bit of SACD format book.
38	SUPDT0	O	Output terminal for supplementary data (LSB).
39	SUPDT1	O	Output terminal for supplementary data.
40	SUPDT2	O	Output terminal for supplementary data.
41	SUPDT3	O	Output terminal for supplementary data.
42	VSIO	—	Ground terminal for input and output.
43	SUPDT4	O	Output terminal for supplementary data.
44	SUPDT5	O	Output terminal for supplementary data.
45	VDIO	—	Power terminal for input and output. Supply +3.3 V.
46	SUPDT6	O	Output terminal for supplementary data.

Pin No.	Pin Name	I/O	Description
47	SUPDT7	O	Output terminal for supplementary data (MSB).
48	XSUPAK	O	Output terminal for supplementary data acknowledge.
49	VSC	—	Ground terminal for core.
50	TESTO	O	Output terminal for testing. Keep open.
51	TESTI	I	Input terminal for testing. Fix “L”.
52	TESTI	I	Input terminal for testing. Fix “L”.
53	TESTO	O	Output terminal for testing. Keep open.
54	VDC	—	Power terminal for core. Supply +2.5 V.
55	TESTO	O	Output terminal for testing. Keep open.
56	TESTO	O	Output terminal for testing. Keep open.
57	BCKASL	I	Bit clock input/output selection terminal for DSD data output. “L” is input (slave) and “H” is output (Master).
58	VSDSD	—	Ground terminal for DSD data output.
59	BCKAI	I	Bit clock input terminal for DSD data output. When BCKASL is “L”, input bit clock into this terminal.
60	BCKAO	O	Bit clock output terminal for DSD data output. When BCKASL is “H”, bit clock is output from this terminal.
61	PHREFI	I	Phase reference signal input terminal for DSD output phase modulation.
62	PHREFO	O	Phase reference signal output terminal for DSD output phase modulation.
63	ZDFL	O	Zero data detection flag in channel R (when setting microcomputer). When no sound data keeps for 300 msec, this flag changes to “H”.
64	DSAL	O	Output terminal for DSD data in channel L.
65	ZDFR	O	Zero data detection flag in channel L (when setting microcomputer). When no sound data keeps for 300 msec, this flag changes to “H”.
66	DSAR	O	Output terminal for DSD data in channel R.
67	VDDSD	—	Power terminal for DSD data output. Supply a +3.3 V that is separated from other digital power source.
68	ZDFC	O	Zero data detection flag in channel C (when setting microcomputer). When no sound data keeps for 300 msec, this flag changes to “H”.
69	DSAC	O	DSD data output terminal in channel C.
70	ZDFLFE	O	Zero data detection flag in channel LFE (when setting microcomputer). When no sound data keeps for 300 msec, this flag changes to “H”.
71	DSALFE	O	DSD data output terminal in channel LFE.
72	VSDSD	—	Ground terminal for DSD data output.
73	ZDFLS	O	Zero data detection flag in channel LS (when setting microcomputer). When no sound data keeps for 300 msec, this flag changes to “H”.
74	DSALS	O	DSD data output terminal in channel LS.
75	ZDFRS	O	Zero data detection flag in channel RS (when setting microcomputer). When no sound data keeps for 300 msec, this flag changes to “H”.
76	DSARS	O	DSD data output terminal in channel RS.
77	VDDSD	—	Power terminal for DSD data output. Supply a +3.3 V that is separated from other digital power source.
78	TESTO	O	Output terminal for testing. Keep open.
79	TESTO	O	Output terminal for testing. Keep open.
80	VSC	—	Ground terminal for core.
81	TESTO	O	Output terminal for testing. Keep open.
82	TESTO	O	Output terminal for testing. Keep open.
83	VDC	—	Power terminal for core. Supply +2.5 V.
84	TESTO	O	Output terminal for testing. Keep open.
85	TESTO	O	Output terminal for testing. Keep open.
86	VSIO	—	Ground terminal for input and output.
87	TESTO	O	Output terminal for testing. Keep open.
88	TESTI	I	Input terminal for testing. Fix “L”.
89	TESTI	I	Input terminal for testing. Fix “L”.
90	VDIO	—	Power terminal for input and output. Supply +3.3 V.
91	TESTO	O	Output terminal for testing. Keep open.
92	TESTO	O	Output terminal for testing. Keep open.
93	TESTO	O	Output terminal for testing. Keep open.

Pin No.	Pin Name	I/O	Description
94	VSC	—	Ground terminal for core.
95	TESTI	I	Input terminal for testing. Fix "H".
96	TESTI	I	Input terminal for testing. Fix "L".
97	TESTI	Ipu	Input terminal for testing. Fix "H".
98	TESTO	O	Input terminal for testing. Keep open.
99	VDC	—	Power terminal for core. Supply +2.5 V.
100	TESTI	I	Input terminal for testing. Fix "L".
101	TESTI	I	Input terminal for testing. Fix "L".
102	TESTI	I	Input terminal for testing. Fix "L".
103	TESTI	I	Input terminal for testing. Fix "L".
104	TESTI	I	Input terminal for testing. Fix "L".
105	TESTI	I	Input terminal for testing. Fix "L".
106	VSIO	—	Ground terminal for input and output.
107	TESTI	I	Input terminal for testing. Fix "L".
108	TESTI	I	Input terminal for testing. Fix "L".
109	TESTI	I	Input terminal for testing. Fix "L".
110	VDIO	—	Power terminal for input and output. Supply +3.3 V.
111	WAD0	I	External A/D data input terminal for PSP physical disc marking detection (LSB). This terminal is not used for internal A/D but is used only for connecting A/D to outside.
112	WAD1	I	External A/D data input terminal for PSP physical disc marking detection.
113	WAD2	I	External A/D data input terminal for PSP physical disc marking detection.
114	WAD3	I	External A/D data input terminal for PSP physical disc marking detection.
115	VSIO	—	Ground terminal for input and output.
116	VSC	—	Ground terminal for core.
117	WAD4	I	External A/D data input terminal for PSP physical disc marking detection.
118	WAD5	I	External A/D data input terminal for PSP physical disc marking detection.
119	WAD6	I	External A/D data input terminal for PSP physical disc marking detection.
120	WAD7	I	External A/D data input terminal for PSP physical disc marking detection (MSB).
121	VDC	I	Power terminal for core. Supply +2.5 V.
122	TESTI	I	Input terminal for testing. Fix "L".
123	WCK	I	Operation clock for PSP physical disc marking detection. Input PLL clock that supports 1T of RF.
124	WAVDD	—	A/D power terminal for PSP physical disc marking detection. Supply +2.5 V that is separated from other digital power source.
125	WAVDD	—	A/D power terminal for PSP physical disc marking detection. Supply +2.5 V that is separated from other digital power source.
126	WARFI	Ai	Analog RF signal input terminal for PSP physical disc marking detection. Full scale is 2.5 V.
127	WAVRB	Ai	A/D bottom reference terminal for PSP physical disc marking detection. Voltage that is input into this terminal, becomes a full scale at ground side of A/D.
128	WAVSS	—	A/D ground terminal for PSP physical disc marking detection.
129	WAVSS	—	A/D ground terminal for PSP physical disc marking detection.
130	VSIO	—	Ground terminal for input and output.
131	DQ7	I/O	Input and output terminal for SDRAM data (MSB).
132	DQ6	I/O	Input and output terminal for SDRAM data.
133	DQ5	I/O	Input and output terminal for SDRAM data.
134	DQ4	I/O	Input and output terminal for SDRAM data.
135	VDIO	—	Power terminal for input and output. Supply +3.3 V.
136	DQ3	I/O	Input and output terminal for SDRAM data.
137	DQ2	I/O	Input and output terminal for SDRAM data.
138	DQ1	I/O	Input and output terminal for SDRAM data.
139	DQ0	I/O	Input and output terminal for SDRAM data.
140	VSIO	—	Ground terminal for input and output.
141	DCLK	O	Clock output terminal for SDRAM.
142	DCKE	O	Clock enable output terminal for SDRAM.

# SCD-C555ES

Pin No.	Pin Name	I/O	Description
143	XWE	O	Write enable output terminal for SDRAM.. Connect it to XWE terminal of DRAM.
144	XCAS	O	Column address strobe output terminal for SDRAM. Connect it to CAS terminal of SDRAM.
145	XRAS	O	Row address strobe output terminal for SDRAM. Connect it to RAS terminal of SDRAM.
146	VDIO	—	Power terminal for input and output. Supply +3.3 V.
147	TESTO	O	Keep open.
148	A11	O	Address output terminal for SDRAM ÅiMSBÅj.
149	A10	O	Address output terminal for SDRAM.
150	VSC	—	Ground terminal for core.
151	A9	O	Address output terminal for SDRAM.
152	A8	O	Address output terminal for SDRAM.
153	VDC	—	Power terminal for core. Supply +2.5 V.
154	A7	O	Address output terminal for SDRAM.
155	A6	O	Address output terminal for SDRAM.
156	A5	O	Address output terminal for SDRAM.
157	A4	O	Address output terminal for SDRAM.
158	VSIO	—	Ground terminal for input and output.
159	A3	O	Address output terminal for SDRAM.
160	A2	O	Address output terminal for SDRAM.
161	A1	O	Address output terminal for SDRAM.
162	A0	O	Address output terminal for SDRAM. (LSB).
163	VDIO	—	Power terminal for input and output. Supply +3.3 V.
164	XSRQ	O	Data request output terminal that inputs into front end processor.
165	XSHD	I	Input terminal for header flag that is output from front end processor.
166	SDCK	I	Input terminal for data transmission clock that is output from front end processor.
167	XSAK	I	Input terminal for data effective flag that is output from front end processor.
168	SDEF	I	Input terminal for error flag that is output from front end processor.
169	SD0	I	Input terminal for stream data that is output from front end processor (LSB).
170	SD1	I	Input terminal for stream data that is output from front end processor.
171	SD2	I	Input terminal for stream data that is output from front end processor.
172	SD3	I	Input terminal for stream data that is output from front end processor.
173	SD4	I	Input terminal for stream data that is output from front end processor.
174	SD5	I	Input terminal for stream data that is output from front end processor.
175	SD6	I	Input terminal for stream data that is output from front end processor.
176	SD7	I	Input terminal for stream data that is output from front end processor (MSB).

• MAIN BOARD IC803 CXD9647 (DSD DSP)

Pin No.	Pin Name	I/O	Description
1	VDD	—	Power terminal. Supply +3.3 V.
2	XMSDOE	O	Output enable terminal for microcomputer serial communication. When using tri-state buffer externally, activates by this terminal. When outputs “MSDATA”, “L” is shown.
3	MSREADY	O	Output ready flag for microcomputer serial communication. When completing, outputs “L”. Open drain.
4	MSDATA	O	Data output terminal for microcomputer serial communication. Hi-Z except for output.
5	MSDATI	I	Data input terminal for microcomputer serial communication. Inputs data and address with serial from microcomputer.
6	MSCK	I	Shift clock input terminal for microcomputer serial communication. Imports and shifts serial input data by setting up clock that inputs into this terminal. When reading out, read data change by falling of clock that inputs into this terminal.
7	XMSLAT	I	Latch input terminal for microcomputer serial communication. Latches address and data at falling this signal.
8	GND	—	Ground terminal
9	TESTO	O	Output terminal for testing. Keep open.
10	TESTO	O	Output terminal for testing. Keep open.
11	TESTO	O	Output terminal for testing. Keep open.
12	TESTO	O	Output terminal for testing. Keep open.
13	TESTO	O	Output terminal for testing. Keep open.
14	TESTO	O	Output terminal for testing. Keep open.
15	TESTO	O	Output terminal for testing. Keep open.
16	TESTO	O	Output terminal for testing. Keep open.
17	TESTI	Ipd	Input terminal for testing (pull down). Keep open or fix “L”.
18	TESTI	Ipd	Input terminal for testing (pull down). Keep open or fix “L”.
19	TESTO	O	Output terminal for testing. Keep open.
20	GND	—	Ground terminal
21	TESTI	Ipd	Input terminal for testing (pull down). Keep open or fix “L”.
22	GND	—	Ground terminal
23	TESTI	I	Input terminal for testing. Fix “L”.
24	TESTO	O	Output terminal for testing. Keep open.
25	VDD	—	Power terminal. Supply +3.3 V.
26	GND	—	Ground terminal
27	TESTI	Ipd	Input terminal for testing (pull down). Keep open or fix “L”.
28	FS128	O	Bit clock output terminal for DSD data phase modulation input. Outputs 128 Fs.
29	TESTI	Ipd	Input terminal for testing (pull down). Keep open or fix “L”.
30	FS64	O	Bit clock output terminal for DSD data normal input or phase reference signal output terminal for phase modulation input. Outputs 64 Fs.
31	GND	—	Ground terminal
32	DSI1	I	DSD data input terminal 1
33	GND	—	Ground terminal
34	DSI2	I	DSD data input terminal 2
35	VDD	—	Power terminal. Supply +3.3 V.
36	DSI3	I	DSD data input terminal 3
37	GND	—	Ground terminal
38	DSI4	I	DSD data input terminal 4
39	GND	—	Ground terminal
40	DSI5	I	DSD data input terminal 5
41	VDD	—	Power terminal. Supply +3.3 V.
42	DSI6	I	DSD data input terminal 6
43	GND	—	Ground terminal
44	TESTO	O	Output terminal for testing. Keep open.
45	TESTO	O	Output terminal for testing. Keep open.
46	TESTO	O	Output terminal for testing. Keep open.
47	TESTI	I	Input terminal for testing. Fix “L”.
48	TESTO	O	Output terminal for testing. Keep open.

Ipd : Pull down input

# SCD-C555ES

Pin No.	Pin Name	I/O	Description
49	TESTI	I	Input terminal for testing. Fix "L".
50	GND	—	Ground terminal
51	VDD	—	Power terminal. Supply +3.3.V.
52	TESTO	O	Output terminal for testing. Keep open.
53	GND	—	Ground terminal
54	TESTO	O	Output terminal for testing. Keep open.
55	GND	—	Ground terminal
56	DSAL	O	Channel L DSD data output terminal
57	VDD	—	Power terminal. Supply +3.3.V.
58	DSAR	O	Channel R DSD data output terminal
59	GND	—	Ground terminal
60	DSALS	O	Channel LS DSD data output terminal
61	GND	—	Ground terminal
62	DSARS	O	Channel RS DSD data output terminal
63	VDD	—	Power terminal. Supply +3.3 V.
64	DSAC	O	Channel C DSD data output terminal
65	GND	—	Ground terminal
66	DSASW	O	Channel SW DSD data output terminal
67	GND	—	Ground terminal
68	PHREFO	O	Phase reference signal input terminal for DSD output phase modulation
69	PHREFI	I	Phase reference signal output terminal for DSD output phase modulation
70	BCKASL	I	Bit clock input/output selection terminal for DSD data output. "L" is input (slave) and "H" is output (Master).
71	BCKAO	O	Bit clock output terminal for DSD data output. When BCKASL is "H", bit clock is output from this terminal.
72	BCKAI	I	Bit clock input terminal for DSD data output. When BCKASL is "L", input bit clock into this terminal.
73	TESTO	O	Output terminal for testing. Keep open.
74	TESTO	O	Output terminal for testing. Keep open.
75	VDD	—	Power terminal. Supply +3.3 V.
76	GND	—	Ground terminal
77	TESTI	I	Input terminal for testing. Fix "L".
78	TESTI	I	Input terminal for testing. Fix "L".
79	TESTI	I	Input terminal for testing. Fix "L".
80	TESTI	I	Input terminal for testing. Fix "L".
81	TESTI	I	Input terminal for testing. Fix "L".
82	TESTI	I	Input terminal for testing. Fix "L".
83	TESTO	O	Output terminal for testing. Keep open.
84	TESTO	O	Output terminal for testing. Keep open.
85	TESTI	I	Input terminal for testing. Fix "L".
86	TESTI	I	Input terminal for testing. Fix "L".
87	GND	—	Ground terminal
88	MCKI	I	Master clock input terminal. Inputs clock with 768 Fs (33.8688 MHz).
89	VDD	—	Power terminal. Supply +3.3 V.
90	TESTO	O	Output terminal for testing. Keep open.
91	TESTO	O	Output terminal for testing. Keep open.
92	TESTO	O	Output terminal for testing. Keep open.
93	TESTI	I	Input terminal for testing. Fix "L".
94	TESTI	I	Input terminal for testing. Fix "L".
95	TESTI	I	Input terminal for testing. Fix "L".
96	TESTI	I	Input terminal for testing. Fix "L".
97	TESTI	IpD	Input terminal for testing (pull down). Keep open or fix "L".
98	SMUTE	I	Soft mute terminal. Soft-mutes audio output with "H" and releases it with "L".
99	XRST	I	Reset terminal. Resets entire IC on "L". Clock that is output from FS128 and FS64 of output terminal, doesn't stop in resetting.
100	GND	—	Ground terminal

• MAIN BOARD IC901 CXP974F096R (MECHA CONTROL)

Pin No.	Pin Name	I/O	Description
1	MODE_DF	O	SACD/CD mode select signal “L” : CD mode “H” : SACD mode
2	AMUTE	O	Analog mute “L” : muting
3	DOCTRL	O	Digital out control “L” : digital out off “H” : digital out on

64	NC	—	NC

## SECTION 5

### SERVICING NOTES (2)

#### **Cleaning of Optical Pick-up Lens**

In cleaning the lens of optical pick-up, use the air blower.

Never use a cotton swab for cleaning the lens of optical pick-up, which otherwise causes a trouble.

#### **Resetting Operation at Power ON**

If the power is turned on with a disc loaded in the set, a sequence of operation as shown below will be performed.  
(The operation varies depending on the type of disc) Condition: continue mode

##### (1) CD

1. Sled reverse move (sled in)
2. Disc detect
3. IC setting for CD
4. Servo error signal offset auto adjustment
5. Spindle kick for LD on
6. LD on
7. Focus search
8. Focus servo on
9. Spindle kick
10. Spindle servo on
11. E-F balance auto adjustment
12. Tracking & sled servo on
13. Focus bias auto adjustment
14. Focus servo gain auto adjustment
15. Tracking servo gain auto adjustment
16. Jump to lead-in area
17. Read TOC
18. Stop

##### (3) SACD (dual layer)

1. Sled reverse move (sled in)
2. Disc detect
3. IC setting for SACD
4. Servo error signal offset auto adjustment
5. Spindle kick for LD on
6. LD on
7. Focus search
8. Focus servo on (layer 0)
9. Spindle kick
10. Spindle servo on
11. E-F balance auto adjustment (layer 0)
12. Tracking & sled servo on (layer 0)
13. Focus bias auto adjustment (layer 0)
14. Focus servo gain auto adjustment (layer 0)
15. Tracking servo gain auto adjustment (layer 0)
16. Jump to lead-in area
17. Read TOC
18. Focus jump (layer 0→layer 1)
19. E-F balance auto adjustment (layer 1)
20. Tracking & sled servo on (layer 1)
21. Focus bias auto adjustment (layer 1)
22. Focus servo gain auto adjustment (layer 1)
23. Tracking servo gain auto adjustment (layer 1)
24. Focus Jump (layer 1→layer 0)
25. Stop

##### (2) SACD (single layer)

1. Sled reverse move (sled in)
2. Disc detect
3. IC setting for SACD
4. Servo error signal offset auto adjustment
5. Spindle kick for LD on
6. LD on
7. Focus search
8. Focus servo on
9. Spindle kick
10. Spindle servo on
11. E-F balance auto adjustment
12. Tracking & sled servo on
13. Focus bias auto adjustment
14. Focus servo gain auto adjustment
15. Tracking servo gain auto adjustment
16. Jump to lead-in area
17. Read TOC
18. Stop

## SECTION 6

### TEST MODE

#### FLUORESCENT INDICATOR TUBE MODE

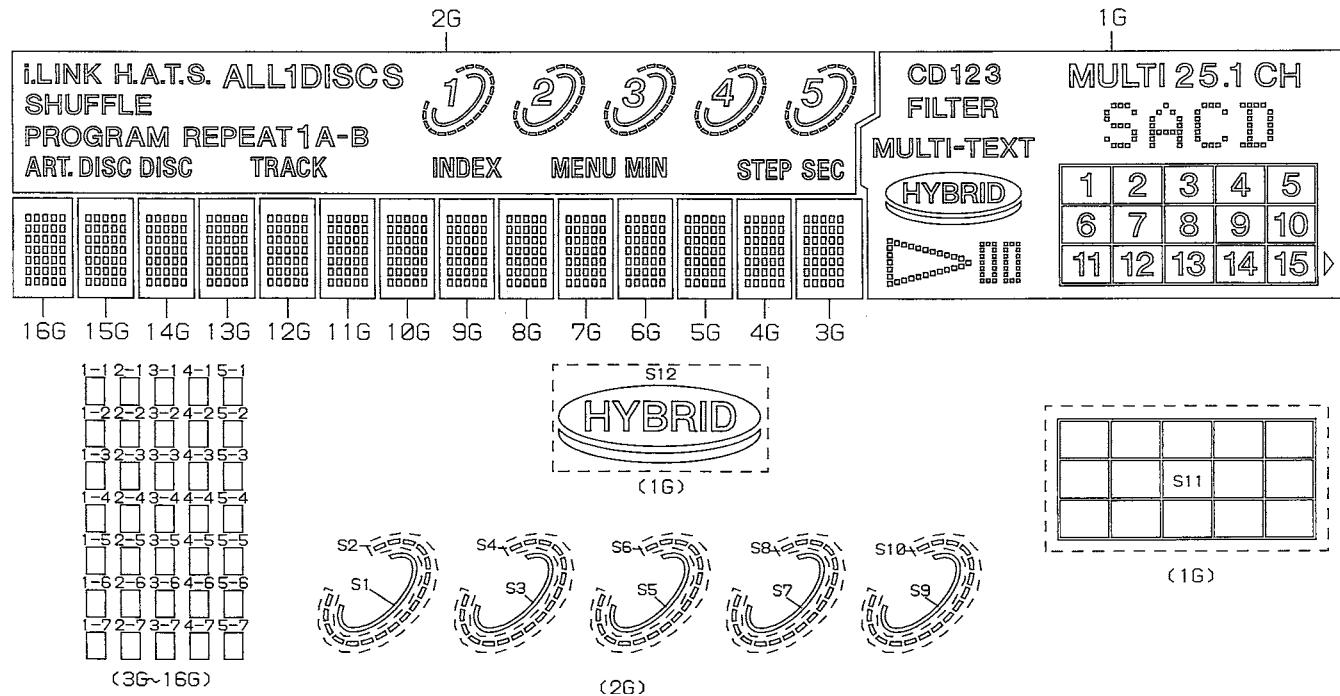

**Note:** Set the **[CD1/CD2]** switch on the remote commander to CD1.

##### Procedure:

1. While shorting the Test Land and the GND side of C1002 (Display board) with tweezers, press the **[POWER]** button and turn on the main power. The following operations will be executed automatically.

- ① Grid of all segments lights up sequentially starting from 1G to 16G.
- ② The vertical line (total 5 lines) of all grids lights up sequentially in the range of 3G to 16G starting from the left.
- ③ The horizontal line of (total 7 lines) of all grids lights up sequentially in the range of 3G to 16G starting from the top.
- ④ Grids from 5G to 6G go off.

2. With the machine in the status that is set in step 1-④, press any on the remote commander. The grids 1G and 2G go off and then the machine enters the key check standby state. (When the **[EJECT]** key or the **[STOP]** key is pressed, the reception check is canceled.)

This set automatically executes self-diagnosis and various checks by entering the test mode.

**Note:** This set automatically makes various adjustments according to the type of disc, thereby not requiring adjustment of the set when parts were replaced. However, be sure to execute 6-1. IC AND FLUORESCENT DISPLAY TUBE CHECK, 6-2. AUTO CHECK and 6-8. WAVEFORMS CHECK.

### Disc for Test Mode

Various checks of this set require the following discs.

Model	Type *1	Category	Application
MODEL SATD-S5 (J-2501-215-A)	SL	12 cm disc Reference disc	Adjusted value check, Operation check, Optical waveform check
Not specified	DL	12 cm disc	Operation check
PATD-012 (4-225-203-01) YEDES-18 (3-702-101-01)	CD	12 cm disc Reference disc	Adjusted value check, Operation check, Optical waveform check
Not specified	HYBRID	12 cm disc	Operation check

\*1 SL: Single Layer

DL: Dual Layer

### Setting Method of Test Mode

Turn the [POWER] switch on while pressing the [ $\triangleleft\triangleleft$ AMS $\triangleright\triangleright$ ] dial and the [TIME/TEXT] button. Release the [TIME/TEXT] button and the [ $\triangleleft\triangleleft$ AMS $\triangleright\triangleright$ ] dial in this order when "TEST MODE Menu" is displayed on the fluorescent display tube. (If the [ $\triangleleft\triangleleft$ AMS $\triangleright\triangleright$ ] dial is released first, the test mode becomes active but "TEST MODE Menu" is not displayed)

### Test Mode Command List

The contents of test mode are as follows.

**Note:** Wrong operation in the test mode causes a trouble, thus requiring extreme care.

LINE command (1X): Use mainly for a manufacturing line.

No.	Name	Description	Remarks
05	DSP MON1	XUGF, XPCK, C2PO outputted from IC509 (CD DSP)	Not used for the servicing
06	DSP MON2	MNT0, MNT1, MNT2, MNT3 outputted from IC509 (CD DSP)	Not used for the servicing
07	DSP MON3	RFCK, XPCK, XROF, GTOP outputted from IC509 (CD DSP)	Electrical measurement, CD CLV jitter measurement

STANDARD command (1X): Use when the servo is applied by manual operation.

No.	Name	Description	Remarks
12	LD ON/OFF	The laser diode is turned on or off	On or off are switched alternately
13	SPIN ON/OFF	The spindle motor is rotated with the regulated voltage	On or off are switched alternately
14	FSRV ON/OFF	The focus servo is turned on or off	On or off are switched alternately
15	TSRV ON/OFF	The tracking servo is turned on or off	On or off are switched alternately
16	CLV ON/OFF	The spindle SLV servo is turned on or off Focus and tracking servos must be already turned on	On or off are switched alternately
17	SSRV ON/OFF	The sled servo is turned on or off Focus, tracking and spindle servos must be already turned on	On or off are switched alternately
18	ALL SRV ON	All servos are turned on	
19	ALL SRV OFF	All servos are turned off	Stop command in the test mode

### [OPEN/CLOSE] key in the TEST mode.

The [OPEN/CLOSE] key is disabled immediately after the machine enters the TEST mode. Be sure to turn the [ $\triangleleft\triangleleft$ AMS $\triangleright\triangleright$ ] dial to select 59 Table Init and push [ $\triangleleft\triangleleft$ AMS $\triangleright\triangleright$ ] once. When initialization of the table is completed, the message INITAIL OK appears several seconds on the FL display. After this, the [OPEN/CLOSE] key is enabled and disc can be inserted and ejected.

When the command 59 Table Init is executed, the same operations of the POWER ON to the disc chucking in the normal operations as described below are performed. However, it presumes that the door and the tray are closed depending on the stop status.

59 Table Init → BU DOWN (disc unchucking) → Table rotates (disc search) → BU UP (disc chucking) at the disc that is found first of all.

When there are no discs, BU UP is executed at the DISC1 position.

### Releasing Method of Test Mode

To release the test mode, turn the [POWER] switch off.

### Selection/Entry of Test Mode

To select and enter the "TEST MODE Menu", operate as follows.

1. Rotate the [ $\triangleleft\triangleleft$ AMS $\triangleright\triangleright$ ] dial to select the menu, and press the [ $\triangleleft\triangleleft$ AMS $\triangleright\triangleright$ ] dial to enter.
2. The test is switched on or off alternately each time the [ $\triangleleft\triangleleft$ AMS $\triangleright\triangleright$ ] dial is pressed.
3. To return to the previous step, rotate the [ $\triangleleft\triangleleft$ AMS $\triangleright\triangleright$ ] dial to select the desired item, and press the [ $\triangleleft\triangleleft$ AMS $\triangleright\triangleright$ ] dial to enter.

# SCD-C555ES

FOCUS command (2X): Focus related. (All servos must be already turned on (except command 21))

No.	Name	Description	Remarks
21	FSRCH ON/OFF	The continuous vertical motion of the optical pick-up lens is turned on or off	Avoid a long-time use
22	F-BIAS UP	Increase focus bias	Focus bias value
23	F-BIAS DOWN	Decrease focus bias	Focus bias value
24	ADJ FCSBIAS	The focus bias is adjusted automatically Both + and - directions are searched to search for best jitter point	
25	FGAIN UP/DW	The focus servo gain is switched between normal and down	Normal or down are switched alternately
26	FJMP UP/DWN	Focus jump is executed UP: layer 0→1, DOWN: layer 1→0	Valid only for DL
27	FOCUS AGC	The focus servo gain is adjusted automatically	
28	DISP FBDATA	The focus bias adjusted value is displayed	Hexadecimal display 9 bit data

**Note:** On or off and up or down are switched alternately

OFFSET (PI, FE, TE) command (3X): Adjusts the offset of PI, FE and TE signals.

No.	Name	Description	Remarks
31	PI/FE OFFSET	Adjusts the offset of PI, FE and TE signals This adjustment must be executed after 61 DISC DETECT	TE offset adjustment is executed for the CD only

TRACKING command (4X): Tracking servo related.

No.	Name	Description	Remarks
41	TGAIN NM/UP	The tracking servo gain is switched between normal and up	Normal or up are switched alternately
44	ADJ TRK DSP	The traverse AGC and E-F balance adjustment is performed	
45	TRACKING AGC	The tracking servo gain is adjusted automatically	

SEARCH command (5X): Track search related. (Nos. 51 through 53 are not used for the servicing.)

No.	Name	Description	Remarks
51	1-TRCK JUMP	One-track jump is performed	
52	M-TRCK MOVE	M-track movement is performed	
53	FINE SEARCH	Fine search is performed	
58	CDM Check	Measurement of table rotation hours, tray open/close hours and panel door open close hours	
59	Table Init	Initializes the table.	After this command, the [OPEN/CLOSE] key is enabled.

DISC DETECT command (6X): Disc type check related.

No.	Name	Description	Remarks
61	DISC DETECT	Disc type check is executed Display after judgment DSKMOD CD: Judged as CD DSKMOD SL: Judged as SACD (SL) DSKMOD DL: Judged as SACD (DL) DSKMOD HLHD: Judged as HYBRID HD DSKMOD CDRW: Judged as CD-RW	Refer to how to apply servo by manual operation (62 page)
62	SET DISC CD	Enter disc type CD setting	CD forced setting
63	SET DISC SL	Enter disc type SL setting	SL forced setting
64	SET DISC DD	Enter disc type DD setting	DD forced setting
65	SET DISC HH	Enter disc type HYBRID HD setting	HD forced setting
66	SET DISC HC	Enter disc type HYBRID CD setting	CD forced setting

TOOLS command (8X): Performs aging, reads adjusting parameters, etc.

No.	Name	Description	Remarks
81	VERSION	Firmware version is displayed	Example: Ver 1.00
83	TRAY AGING	Tray open-close aging is performed Not used for the servicing	Number of times and eccentricity measurement Not used in this set.
84	JITTER	Jitter measurement	Not used for the servicing
85	ERROR RATE	Error rate measurement CD: C1, C2 SACD: PO, PI1, PI2	Error rate Not used for the servicing
86	ALL SRV ON	Apply all servos Full automatic measurement including PI, FE and TE offset adjustment is performed	Use when applying the servo by manual operation Refer to STANDARD command (54 page)
87	DISP ADJ DT	Automatic adjusting parameters are displayed The offset adjusted values are scroll-displayed in order of RF, VC, FE and TE	Refer to auto check items (59 page) Refer to auto check items (59 page)
8d	Set Up Init	Set to factory shipping mode PLAY, REPEAT, DIGIFIL, etc. are initialized	Set when repair completed Refer to 6-7. SHIPPING MODE (64 page)
8F	49 TRCK JIT	Used for jitter measurement of 49th music on SACD-S4	For manufacturing line Not used for the servicing

QA command (9X)

No.	Name	Description	Remarks
92	SET CHECK	The set is checked	Refer to 6-2. AUTO CHECK (59 page)
94	SET AGING	The set aging is performed Repeat by the specified number of times or until an error occurred	Refer to 6-6. AGING MODE (64 page)
95	DISPLAY ERROR	The content of error recorded to the set is read and displayed (Error recording) Only one item is recorded	
96	D-OUT OnOff	Digital out of CD is turned on or off	Not used in this set.
98	APDO JITTER		Not used for the servicing
9C	BU DENCHO	The content of error recorded to the set is read, and then the S curve waveform, traverse waveform, and RF waveform can be checked successively	Refer to 6-8.WAVEFORMS CHECK (66page)
9D	P-ON HOUR	Approximate cumulative power supplying time is displayed (Initialized by 8d command)	In unit of 1 hour
9E	RFD OUT	RFD output is turned on or off SACD jitter measuring mode	Not used for the servicing

### How to Apply Servo by Manual Operation

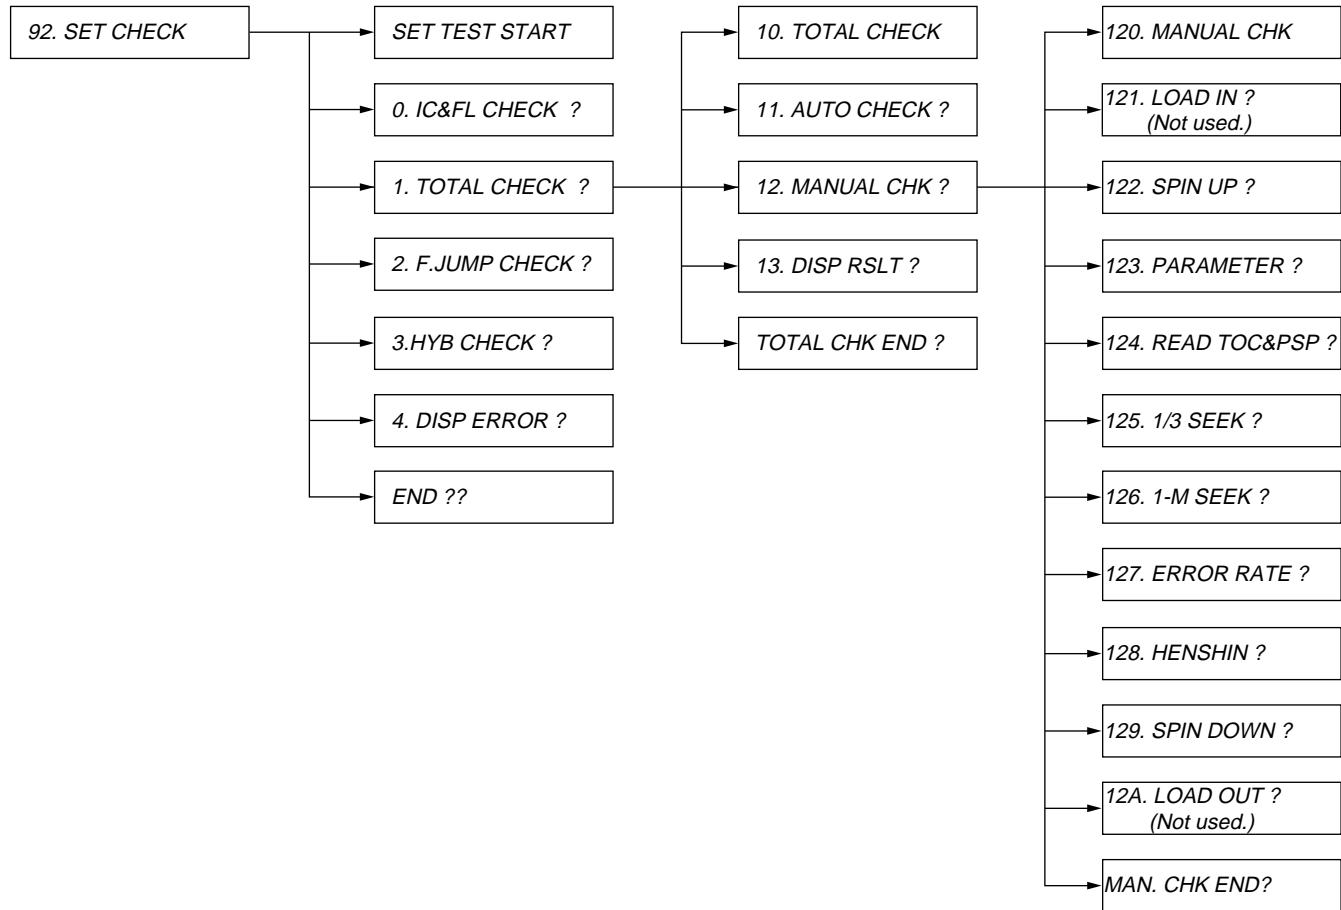

In analyzing failures of the set, the servo may be applied by manual operation. To apply servo in the test mode, use the following method.

1. After setting the test mode, rotate the dial to select a command, and press the dial to enter.
2. “61 DISC DETECT” (Disc type check)→“86 ALL SRV ON” (All servos on + auto adjustment)
3. If applying servo while checking the condition one by one, “61 DISC DETECT” (Disc type check)→“31 PI/FE OFSET” (Offset automatic adjustment)→“14 FSRV ON/OFF” (Focus servo on)→“16 CLV ON/OFF” (CLV servo on)→“44 ADJ TRK DSP” (E-F balance adjustment)→“15 TSRV ON/OFF” (Tracking servo on)→“17 SSRV ON/OFF” (Sled servo on)→“24 ADJ FCSBIAS” (Focus bias adjustment)→“27 FOCUS AGC” (Focus auto gain adjustment)→“45 TRACKING AGC” (Tracking auto gain adjustment).

**Note:** 1. On and off are alternately switched in the same command.

2. For a stop, select “19 ALL SRV OFF” and press the dial.

## Set Check

Press the **[◀◀AMS▶▶]** dial when No.□□□□□ □□□□□\*1 is displayed, and a checking for that display will start or the lower layer will be selected. For the selection on the same layer, rotate the **[◀◀AMS▶▶]** dial. It is looped on the same layer, and when "END?" is displayed, press the **[◀◀AMS▶▶]** dial to return to the upper layer.

\*1 □ denotes a displayed character.

## Manual Check Method

In the "12. MANUAL CHK", individual checks (121. LOAD IN to 12A. LOAD OUT) are possible.

**Example:** If 124. READ TOC of 12. MANUAL CHECK is to be checked.

### Setting Method:

1. After setting the test mode, rotate the **[◀◀AMS▶▶]** dial to select "92. SET CHECK" and press the **[◀◀AMS▶▶]** dial to enter.
2. When "SET TEST START" is displayed, rotate the **[◀◀AMS▶▶]** dial clockwise by 2 clicks to select "1. TOTAL CHECK?" and press the **[◀◀AMS▶▶]** dial to enter.
3. When "10. TOTAL CHECK" is displayed, rotate the **[◀◀AMS▶▶]** dial clockwise by 2 clicks to select "12. MANUAL CHK?" and press the **[◀◀AMS▶▶]** dial to enter.
4. When "120. MANUAL CHK" is displayed, rotate the **[◀◀AMS▶▶]** dial clockwise by 4 clicks to select "124. READ TOC&PSP?" and press the **[◀◀AMS▶▶]** dial to enter.
5. A checking will start automatically.

**Note:** In making a check, the disc must be loaded. Immediately when a check started, the tray is drawn into the set. Also, the tray can be opened/closed even during the set check mode.

## 6-1. IC AND FLUORESCENT DISPLAY TUBE CHECK (SELF-DIAGNOSIS)

The communication between microcomputer and main ICs (self-diagnosis) and the fluorescent display tube all lit are checked.

### Checking Method:

- After setting the test mode, rotate the  dial to select “92. SET CHECK” and press the  dial to enter.
- When “SET TEST START” is displayed, rotate the  dial clockwise by 1 click to select “0. IC&FL CHECK?” and press the  dial to enter.
- A checking will start automatically, and “0. IC&FL CHECK” will be displayed. (Checking time is about 3 seconds)
- After IC communication check, all segments of fluorescent display tube will be lit. At this time, check visually for a skipped character.
- At successful completion of check, “0. IC CHECK OK” is displayed. In this case, no error exists in the IC interface. Proceed to 6-2. AUTO CHECK.

**Note:** The check mentioned above tests the communication from microcomputer to main ICs. Even if the check successfully finished, the IC to be checked is not always normal. Consider it for reference only.

- In case of an IC communication error, the following display will be given during the checking. Possible causes of error are as listed below.

Error display	Causes (typical example)
DVD DEC. ERROR	<ol style="list-style-type: none"> <li>IC701 (SACD decoder) is faulty</li> <li>IC701 pin  (XRST) does not go “H”           <ul style="list-style-type: none"> <li>IC901 pin  (XDIS) does not go “H”</li> <li>IC902 (expander) is faulty</li> </ul> </li> <li>768fs (33.86688 MHz) is not present to IC701 pin  (XTAL)           <ul style="list-style-type: none"> <li>IC811 (3-multiplying circuit) is faulty</li> <li>Clock signal 256fs is not sent from AUDIO board (CN902 pin )</li> <li>CN902 pin ,  (DFGND) and pin  (3.3V-D) are open or shorted</li> <li>CN902 and FFC connection is loose, or FFC is disconnected</li> </ul> </li> </ol>
DVD DRAM ERR	<ol style="list-style-type: none"> <li>IC706 (D-RAM) is faulty</li> <li>IC701 pin  (XRST) does not go “H”           <ul style="list-style-type: none"> <li>IC901 pin  (XDIS) does not go “H”</li> <li>IC902 (expander) is faulty</li> </ul> </li> <li>Faulty communication line between IC701 and IC706           <ul style="list-style-type: none"> <li>Data line, address line, WE, etc.</li> </ul> </li> <li>D903 (ISS367) is faulty</li> </ol>
CD DSP ERROR	<ol style="list-style-type: none"> <li>IC509 (CD DSP) is faulty</li> <li>768fs (33.86688 MHz) is not present to IC509 pin  (XTAL)           <ul style="list-style-type: none"> <li>Same as cause 3 of DVD DEC. ERROR</li> </ul> </li> <li>IC509 pin  (XRST) does not go “H”           <ul style="list-style-type: none"> <li>IC901 pin  (XDIS) does not go “H”</li> <li>IC902 (expander) is faulty</li> </ul> </li> </ol>
EEPROM ERROR	<ol style="list-style-type: none"> <li>IC903 (EEPROM) is faulty</li> </ol>

Error display	Causes (typical example)
PRAWN DRAM ERR *1	<ol style="list-style-type: none"> <li>IC808 (D-RAM) is faulty</li> <li>IC801 (DSD decoder) is faulty</li> <li>768fs (33.86688 MHz) is not present to IC801 pin  (MCKI)           <ul style="list-style-type: none"> <li>Same as cause 3 of DVD DEC. ERROR</li> </ul> </li> <li>IC801 pin  (XRST) does not go “H”           <ul style="list-style-type: none"> <li>IC901 pin  (XDIS) does not go “H”</li> <li>IC902 (expander) is faulty</li> </ul> </li> <li>Faulty communication line between IC801 and IC808           <ul style="list-style-type: none"> <li>Data line, address line, WE, etc.</li> </ul> </li> <li>D904 (ISS367) is faulty</li> <li>D+3.3V is not present to IC808</li> </ol>
RF AMP ERROR	<ol style="list-style-type: none"> <li>IC001 (RF AMP) is faulty</li> <li>Loose connection between CN503 on MAIN board and CN001 on RF board, or FFC disconnection           <ul style="list-style-type: none"> <li>CN503 pin  (CLK RF), pin  (DATA RF) and pin  (SDEN) must be checked</li> </ul> </li> </ol>

\*1 DSD decoder is also checked.

### Causes Common to Each IC:

- Faulty communication line between microcomputer and each IC.  
Disconnected patterns, floating series resistors, bridge, etc.
- Faulty IC supply voltage.  
Particularly, check D+3.3V voltage. (D+5V for display microcomputer)
- Faulty microcomputer communication port to each IC

**Note:** In case of more than two errors, the error display is switched over one after another, thus making the reading difficult.  
In such a case, press again the  dial to make a recheck for error reading.

## 6-2. AUTO CHECK (AUTOMATIC VARIOUS MEASUREMENTS)

The auto check is performed to check if the set operates stably. Though a checking is made automatically, whether the measured data are within the specification is evaluated by the service person. The auto check results in NG immediately, if the check itself causes an error.

### Setting Method of Auto Check Mode:

- After setting the test mode, rotate the **[◀◀ AMS ▶▶]** dial to select “92. SET CHECK” and press the **[◀◀ AMS ▶▶]** dial to enter.
- When “SET TEST START” is displayed, rotate the **[◀◀ AMS ▶▶]** dial clockwise by 2 clicks to select “1. TOTAL CHECK?” and press the **[◀◀ AMS ▶▶]** dial to enter.
- When “10. TOTAL CHECK” is displayed, rotate the **[◀◀ AMS ▶▶]** dial clockwise by 1 click to select “11. AUTO CHECK?”.

### CD and SACD (SL) Disc Operation Check

#### Checking method:

- Press the **[OPEN/CLOSE]** button to open the tray and place the test disc \*1. The **[OPEN/CLOSE]** key is disabled immediately after the machine enters the TEST mode. Be sure to initialize the table.
- Press the **[◀◀ AMS ▶▶]** dial, and the following check will be performed automatically.
- Finally, the test disc will be ejected and the auto check will finish.
- “AUTO CHECK OK” will be displayed at successful completion of auto check.
- Recheck is enabled if the **[◀◀ AMS ▶▶]** dial is pressed in step 4. (Also, use this operation when exchanging the test disc)
- In case of an error during the checking, the check is interrupted automatically and the error is displayed. (Error display example: “DISC DETECT ERROR”) After error display, “CONT?STOP (J/S)” is displayed. In this case, if the **[◀◀ AMS ▶▶]** dial is pressed, the check where the error occurred is skipped and you can proceed to the next check. Also, **[■]** if button is pressed, the check finishes and “AUTO CHECK NG” is displayed when even one NG item exists.

\*1 Use PATD-012 or YEDS-18 for CD, and SATD-S5 or SATD-S4 for SACD (SL). Using another disc will result in a checking failure.

#### Check Items:

Items	Description	Remarks
LOAD IN TIME (msec)	Time until a disc is chucked from the state where loading tray is out	Loading in switch H→L
SPIN UP TIME (msec)	Time from spindle kick to PLL lock	Lock signal L→H
RF/VC/FE/TE (ORG)	Offset values before RF (PI), VC, FE, TE signal offset adjustment RF (8 bit data in hex notation) VC, FE, TE (9 bit data in hex notation)	At offset 0 RF: A0h VC, FE, TE: 00h
RF/VC/FE/TE (ADJ)	Offset values after RF (PI), VC, FE, TE signal offset adjustment (Less than ORG value if offset correction is normal) RF (8 bit data in hex notation) VC, FE, TE (9 bit data in hex notation)	VC offset is not adjusted (Measurement only) Also, for SACD, the TE offset is not measured and adjusted
PI/TRVS PP (ORG/ADJ)	PI (ORG): PI value at disc type check (decimal data) PI (ADJ): PI value after PI offset adjustment (read value at microcomputer A/D) (decimal data) TRVS PP (ORG): Traverse level before level correction (AGC) (decimal data) TRVS PP (ADJ): Traverse level after level correction (AGC) (decimal data)	PI level conversion Read value × 12.9mV  Traverse level conversion Read value × 12.9mV  12.9mV=3.3V ÷ 256 (8 bit)
PIOR/CCR/TRCR	PIOR: Set value of PI offset coarse adjusting register CCR: Set value of FE offset coarse adjusting register TRCR: Set value of TE offset coarse adjusting register	Registers in RF amplifier
FOCUS/TRK GAIN	Auto gain adjusted values of focus and tracking servos (8 bit data in hex notation)	Reference: 30h
FBIAS/TRVSC/TRCR2/CFR	FBIAS: Focus bias set value (9 bit data in hex notation) TRVSC: Traverse center value (9 bit data in hex notation) TRCR2: Set value of E-F balance coarse adjusting register CFR: Set value of traverse level adjusting register	TRCR2 adjusts the E-F gain balance and used for CD only (Fixed to 06 for SACD) TRCR2 and CFR are registers in RF amplifier
MIN JITTER AT F.BIAS	Minimum jitter value in focus bias adjustment (CD only)	Correlative with RF jitter
READ TOC TIME (msec)	Time required for TOC reading	
PSP AMPLITUDE		SACD only
1/3 SEEK TIME F) AVE/MIN/MAX (msec): R) AVE/MIN/MAX (msec):	Seek time between 1/3LBA and 2/3LBA of the disc 1/3LBA→2/3LBA average/minimum/maximum 2/3LBA→1/3LBA average/minimum/maximum	LBA: Absolute address
1/MAX SEEK TIME F) AVE/MIN/MAX (msec): R) AVE/MIN/MAX (msec):	Seek time between most inward track (0LBA) and most outward track max LBA most inward→most outward average/minimum/maximum most outward→most inward average/minimum/maximum	
ERROR RATE	Error rate measurement For CD: Average value/Maximum value of C1 and C2 For SACD: Average value/Maximum value of PO, PI1 and PI2	Measure for 10 sec at track No.5 For the SACD, 160 block data except the data under tracking jump

Items	Description	Remarks
HENSIN	Eccentricity measurement Eccentricity (actual eccentric amount) of disc, disc pulley total	For the CD only are measured • Read by dividing by 10 • 0 may be displayed if eccentricity is small (10um or less) (Due to measurement reason)
SPIN DOWN TIME (msec)	Time from spindle brake application to rotation stop	FG (IC901 pin ⑥) monitoring
LOAD OUT TIME (msec)	Time until loading table comes out from the state where a disc is in chuck	Loading out switch H→L

**Measured Data Reading Method:**

To judge the check result, the measured data must be read.

1. When "AUTO CHECK OK" is displayed, rotate the [◀◀ AMS ▶▶] dial clockwise by 2 clicks.
2. When "13. DISP RSLT?" is displayed, press the [◀◀ AMS ▶▶] dial to enter.
3. "PLEASE WAIT" will be displayed and in several seconds, "13. DISP RESULT" will be displayed.
4. Rotate the [◀◀ AMS ▶▶] dial clockwise by 1 click, and the "LOAD IN" will be displayed.
5. Press the [◀◀ AMS ▶▶] dial to enter. The LOAD IN TIME measured value will be displayed.
6. Compare the displayed value with the following specified value.
7. Hence, repeat step 4 to 6 (display is variable) and read the measured data respectively.
8. Compare the measured data with the specified value to check for NG item.

**Note:** Blank display of measured value means that an error occurred during the checking or no measurement was taken place.

**Specified Value:**

- (1) SACD (Use the test disc SATD-S5 or SATD-S4)

**Note:** Measured values in check items are typical ones.

Check items	Specified value	
LOAD IN TIME (msec) :	Not displayed in this set.

### 6-3. SACD (DL) DISC OPERATION CHECK

(• Perform as necessary)

The stability of the set can be checked by repeating the combined operation of focus jump (layer 0→1, layer 1→0) and access to the most inward track↔most outward track by the set number of times or until an error occurs using the dual layer HD disc, DL disc.

A set of operation including an access to the layer 0 (most inward track)→layer 0 (most outward track)→focus jump (layer 0→1)→layer 1 (most outward track)→layer 1 (most inward track)→focus jump (layer 1→0) is carried out repeatedly by the set number of times.

#### Checking Method:

1. After setting the test mode, rotate the **[◀◀AMS▶▶]** dial to select “92. SET CHECK” and press the **[◀◀AMS▶▶]** dial to enter.
2. When “SET TEST START” is displayed, rotate the **[◀◀AMS▶▶]** dial clockwise by 3 clicks to display “2. F.JMP CHECK?”.
3. Press the **[OPEN/CLOSE]** button to open the tray, and place the DL disc.
4. Press the **[◀◀AMS▶▶]** dial to load the tray into the set.
5. “NOW SET UP” will be displayed and the DL disc setup will start. (It takes about ten and several seconds to set up the disc as two layers of layer 0 and layer 1 are adjusted)
6. At the completion of setup, “F.JUMP TIMES” will be displayed.
7. Rotate the **[◀◀AMS▶▶]** dial clockwise by 5 clicks to display “5”. (If 5 sets of operation is executed \*1)
8. Press the **[◀◀AMS▶▶]** dial, and the check will start.
9. Immediately when the check finished, “UP MAX □□□□”→“UP AVE □□□□”→“DW MAX □□□□”→“DW AVE □□□□”→“F.JMP OK [TIMES]” will be displayed repeatedly. (□ denotes the measured value in msec)

UP MAX: Max time required for layer 0 (most inward track)→layer 0 (most outward track)→focus jump (layer 0→1)

UP AVE: Average time required for layer 0 (most inward track)→layer 0 (most outward track)→focus jump (layer 0→1)

DW MAX: Max time required for layer 1 (most outward track)→layer 1 (most inward track)→focus jump (layer 1→0)

DW AVE: Average time required for layer 1 (most outward track)→layer 1 (most inward track)→focus jump (layer 1→0)

Specified value: 7000 msec or less (if no error occurred)

If an error occurred due to defocusing during the checking, refer to the following error list. (64 page)

10. Press the **[OPEN/CLOSE]** button, and the disc will be ejected and the check will finish. Also, if the **[◀◀AMS▶▶]** dial is pressed in step 9, “2. F.JUMP CHK OK” will be displayed. Then, if the **[◀◀AMS▶▶]** dial is again pressed, “2. F.JMP CHECK” will be displayed instantaneously and a recheck is enabled from the step 5 in the same manner.

\*1 Setting arbitrary number of times instead of 5 allows the checking to be repeated by the set number of times. Also, setting 0 (zero) allows the aging check to be repeated until an error occurs.

### 6-4. HYBRID DISC OPERATION CHECK

(• Perform as necessary)

This test checks the auto adjustment time required when the disc is switched between HD (SACD) layer and CD layer. This test is conducted to check the stability in switching from CD to SACD, or SACD to CD in the HYBRID disc.

A set of operation including CD layer stop state→HD layer auto adjustment→HD layer TOC reading→HD layer stop state→CD layer auto adjustment→CD layer TOC reading→CD layer stop state is repeated by the set number of times.

#### Checking Method:

1. After setting the test mode, rotate the **[◀◀AMS▶▶]** dial to select “92. SET CHECK” and press the **[◀◀AMS▶▶]** dial to enter.
  2. When “SET TEST START” is displayed, rotate the **[◀◀AMS▶▶]** dial clockwise by 4 clicks to display “3. HYB CHECK?”.
  3. Press the **[OPEN/CLOSE]** button to open the tray, and place the HYBRID disc.
  4. Press the **[◀◀AMS▶▶]** dial to load the tray into the set.
  5. “NOW SET UP” will be displayed and the HYBRID disc setup will start. (It takes about several seconds to set up the disc \*1)
  6. At the completion of setup, “CHANGE TIMES?” will be displayed.
  7. Rotate the **[◀◀AMS▶▶]** dial clockwise by 5 clicks to display “5” (if 5 sets of operation is executed \*2)
  8. Press the **[◀◀AMS▶▶]** dial, and “START” will be displayed and the check will start. During the check, the following will be displayed.  
“CD→HD” display: Time from switching from CD layer to HD layer up to start of play is measured.  
“HD→CD” display: Time from switching from HD layer to CD layer up to start of play is measured.
  9. Immediately when the check finished, “CD MAX □□□□”→“CD AVE □□□□”→“HD MAX □□□□”→“HD AVE □□□□” will be displayed repeatedly. (□ denotes the measured value in msec)  
Specified value: 10000 msec or less (if no error occurred)  
If an error occurred due to defocusing during the checking, refer to the following error list. (64 page)
  10. Press the **[OPEN/CLOSE]** button, and the disc will be ejected and the check will finish. Also, if the **[◀◀AMS▶▶]** dial is pressed in step 9, “HYB CHK OK” will be displayed. Then, if the **[◀◀AMS▶▶]** dial is again pressed, “HYBRID CHECK” will be displayed instantaneously and a recheck is enabled from the step 5 in the same manner.
- \*1 “NOW SET UP” display may continue for several minutes and an error may be displayed depending on the discs. In this case, press the **[◀◀AMS▶▶]** dial again.
- \*2 Setting arbitrary number of times instead of 5 allows the checking to be repeated by the set number of times. Also, setting 0 (zero) allows the aging check to be repeated until an error occurs

## 6-5. CDM59 and the Door Check

Measurement of table rotation hours, tray open/close hours and panel door open close hours can be executed together with CDM59.

### Procedure

1. Enter the TEST mode. Turn the **[◀◀AMS▶▶]** dial and select 59 Table Init. Press **[◀◀ AMS ▶▶]** once (that enables the **[OPEN/CLOSE]** key.)
  2. When the message INITIAL OK appears, press the **[OPEN/CLOSE]** key to eject the tray. Place a disc in the DISC1 of the table. (Be sure to place a disc in DISC1. If a disc is placed in any locations other than DISC1, the correct measurement cannot be executed. Therefore, be sure to place a disc in DISC by using the **[DISC SKIP]** key.)
  3. Select 58 CDM Check by turning **[◀◀AMS▶▶]** and press **[◀◀AMS▶▶]** once.
  4. Measurement starts automatically.
  5. When the measurement is completed, the message DOOR OP **□□.□** (**□** is a decimal number) appears on the FL display.
  6. Result of measurement can be check by turning **[◀◀AMS▶▶]**. If any measurement item does not meet specification, a message “ng” is displayed next to the measurement value.
  7. When you want to repeat the test, press **[◀◀AMS▶▶]** again.
  8. Press the **[OPEN/CLOSE]** key to terminate the test and remove the disc.
- \* 1.The measurement can be performed without placing a disc.  
However, the BU chucking time and unchucking time will be slightly different from the actual values.
- \* 2.When the machine enters this mode once, it cannot return to the normal test mode. If any other tests are desired, turn off the main power once and then back on again to enter the test mode.

### Measurement items and specifications

Measurement item	Description	Specifications (unit: second)
RL	Time required for the table to make one complete rotation. (R: Clockwise rotation. L: Counter-clockwise rotation)	6.0 to 7.5
DOOR OP	Time required to open the panel door	<10.0
CLOSE	Time required to close the tray.	<2.3
BU UP	Time required for the BU block to perform chucking from the DOWN position	<1.3
EXOPEN	The XCHANGE OPEN time	<2.5
EXCLOSE	The EXCHANGE CLOSE time	<2.8
BU DOWN	Time required for the BU block to perform unchucking and going to the DOWN position	<0.9
OPEN	Time required to open the tray	<2.4
DOOR CL	Time required to close the panel door.	<10.0

If the panel door cannot be opened, the time-out error is triggered and the measurement is also stopped at this stage. Note that the tray can push the door forcibly as the software judges the door as it is in the OPEN state, if the door open/close detector switches (S1022 and S1023 on the DOOR SW board) have abnormality.

## 6-6 . AGING MODE

(• Perform as necessary)

### 6-6-1. The aging can be performed to the set in the test mode.

The aging can be continued by the set number of times or until an error occurs.

In the aging, the following operations are repeated.

Table turn→Disc chucking→Disc detect→Servo on→Auto adjustment→TOC reading→Play of first track for 5 second→Play of last track for 5 second→Play of first track for 5 second→Disc unchucking

#### Setting Method:

1. After setting the test mode, rotate the **[◀◀AMS▶▶]** dial to select “94. SET AGING” and press the **[◀◀AMS▶▶]** dial to enter.
2. When “AGING TIMES” is displayed, rotate the **[◀◀AMS▶▶]** dial to set the number of aging times. (For the number of times, every 10 times can be set. Setting 0 (zero) eliminates the count limitation where the aging is repeated until an error occurs)  
**Note:** Do not perform unmanned overnight aging..
3. Press the **[◀◀AMS▶▶]** dial, and “AGING START” will be displayed instantaneously, then “DISC IN & JOG ON” will be displayed and the tray will come out automatically.
4. Place a disc (CD or the SACD SL disc) on the tray. In the case of SCD-C555ES, the multiple discs can be placed. Even when the discs (CD or the SACD SL disc) of different types are mixed, the aging test can be performed. Use the **[DISC SKIP]** key when placing a disc. When discs are placed in positions, turn the **[◀◀AMS▶▶]** dial.
5. The aging test starts.
6. At the completion of aging by the set number of times, the tray will come out automatically and the check will stop.  
Typical time required for aging About 1 hour/100 times  
“AGING SUCCESS!” will be displayed if no error occurred in the aging, or the error will be displayed if an error occurred.  
(Refer to the following error list)

#### Error List

An error occurring during the check in the aging mode of the test mode is displayed automatically (scroll display) immediately when the error occurred.

#### < How to view the error history >

1. Select “95 DISP ERROR” with the **[◀◀AMS▶▶]** key, and press the **[◀◀AMS▶▶]** key once.
2. The error that has occurred lastly in the set and the signal status ( $H = 1, L = 0$ ) at that time are displayed on the FL display by scrolling.  
(Types of the errors and the signal status that can be checked, are the same as the error display of the aging mode.)
3. Press the **[◀◀AMS▶▶]** key once again to show the error history repeatedly.
4. When the error history is displayed with scrolling once, the mode returns to the normal test mode.

### 6-6-2. Aging Mode of the Panel Door Independently

1. Start up the unit in the normal operation mode.
2. While press the **[STOP]** key, turn the **[◀◀AMS▶▶]** dial and then press the **[CONTINUE]** key. (The program does not advance if these keys are not pressed in the above sequence.)
3. The panel door repeats opening and closing.
4. The messages “AP-B 000000” (during open) → “AP-C 000000” (during close) are repeated on the FL display. Number of times of open/close are displayed in decimal number in “000000” with OPEN/CLOSE as a set.
5. Press the **[STOP]** key to terminate the aging mode and to return to the normal mode.

## 6-7. SHIPPING MODE

The repaired set must be initialized, and for this purpose the set should be set to the shipping mode.

#### Setting Method:

1. After setting the test mode, rotate the **[◀◀AMS▶▶]** dial to select “8d Set Up Init” and press the **[◀◀AMS▶▶]** dial to enter.
2. “8D 000000000 00” will be displayed, and if the scroll starts in the left direction, the set initialization has completed
3. Press the **[POWER]** button to turn the power off.

**Note:** Take care not to leave the test disc in the set.

#### The following setups are established in the SHIPPING MODE

1. Initialization of EEPROM (IC903)
 

• PLAY MODE	ALL DISCS, CONTINUE
• COMMAND MODE	CD1
• LAYER SELECT	SACD
• M/2CH SELECT	MULTI
• DIGITAL FILTER	STD
• 2ch SPK MODE	2ch DIRECT
• Mch SPK MODE	Mch DIRECT
• Resetting the accumulated hours meter.	
2. Chucking at the DISC1 position.

# SCD-C555ES

Error display is as follows.

Error name, Disc type, IN SW (Sled in switch state), FOK (FOK signal state), LOCK (LOCK signal state), From (Displayed if effective), To (Displayed if effective), Aging times (Displayed in aging mode only)

Display example

ACCESS MOVE ERROR : SACDSL : IN SW 1 FOK 0 LOCK 0 : FROM 205663 : TO 2461601 : TIMES 5

(Error name) (Disc type) (Sled in switch, FOK, LOCK signal state) (Relative address) (Relative address)(Aging times)

## Display Items List:

Display items	Description	Remarks
Error name	→Refer to the error display list	
IN SW	Sled in switch state when an error occurred 0: switch off Not limit in 1: switch on Limit in (Optical pick-up is at most inward track)	
FOK	FOK signal state when an error occurred FOK signal Is focus on? 0: FOK L (Focus off), 1: FOK H (Focus on)	
LOCK	LOCK signal state when an error occurred. LOCK signal Is PLL lock? 0: LOCK L Not lock, 1: LOCK H Lock	
From	Displayed if effective in the error item →Refer to the error display list	Disc PSN (relative address) is displayed in case of access error
To	Displayed if effective in the error item →Refer to the error display list	Disc PSN (relative address) is displayed in case of access error

## Error Display List:

Error display	Error description	Main causes of errors
DISC DETECT ERROR	Disc type error MIRR measured time is displayed in From:	Optical pick-up, RF amplifier or CD DSP IC is faulty
OFFSET ADJUST ERROR	Offset adjustment error	Optical pick-up, RF amplifier or CD DSP IC is faulty
FCS SRV ON ERROR	Focus servo error An error code is displayed in From:	From:1 means focus search failed From:2 means defocusing
CLV SRV ON ERROR	CLV servo error	Defocusing
E-F BALANCE ERROR	E-F balance adjustment error	Defocusing
TRK SRV ON ERROR	Tracking servo error	Tracking servo on time out Optical pick-up, RF amplifier or CD DSP IC is faulty
SLD SRV ON ERROR	Sled servo error	Sled servo on time out
FOCUS BIAS ERROR	Focus bias adjustment failed An error code is displayed in From:	Defocusing during adjustment Description of display An error code is displayed in From From:1 means retry failed 3 times From:2 means abnormal value Optical pick-up, RF amplifier or CD DSP IC is faulty
FCS AGC ERROR	Error at focus gain automatic adjustment	Defocusing during adjustment Optical pick-up, RF amplifier or CD DSP IC is faulty
TRK AGC ERROR	Error at tracking gain automatic adjustment	Defocusing during adjustment Optical pick-up, RF amplifier or CD DSP IC is faulty
ACCESS 1TJ ERROR	Access Error at one-track jump Effective addresses (PSN) are displayed in From: and To:	Access failed Defocusing at access, etc
ACCESS FINE ERROR	Access Error at fine search Effective addresses (PSN) are displayed in From: and To:	Access failed Defocusing at access, etc
ACCESS MOVE ERROR	Access Error at M-track MOVE Effective addresses (PSN) are displayed in From: and To:	Access failed Defocusing at access, etc
WHILE PLAYING ERROR	Error during disc playing	Defocusing Focusing retry failed
FCS JUMP ERROR	Time out error at focus jump	Defocusing Focusing retry failed

System errors are as follows.

**Note:** This error is not saved in the set.

Display	Description
Toc Error *	Error during the time from auto adjustment to TOC reading, Different type of disc (Such as a DVD disc), Disc is dirty
Toc Error ****	Illegal SACD (Such as a pirated version)
Read Error	Music data read error (Error during disc playing)

## 6-8. WAVEFORMS CHECK

This set performs automatic adjustment for each disc, and therefore the set need not be adjusted when parts are replaced, but it requires checking following the description in this section, 6-1. IC AND FLUORESCENT DISPLAY TUBE CHECK and 6-2. AUTO CHECK.

For the check, the test mode is used. Wrong setting causes a trouble, thus requiring extreme care.

### BU Electrical Adjustment Mode

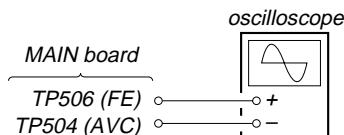

The BU electrical adjustment mode is used to check the S curve waveform, traverse waveform and RF waveform. After a disc is placed on the tray, each time the **AMS** dial is pressed, the check mode is switched in order for S curve waveform → traverse waveform → RF waveform.

#### Setting Method:

After setting the test mode, rotate the **AMS** dial to select "9C BU DENCHO" and press the **AMS** dial to enter. "BU MEASURE" will be displayed if the BU electrical adjustment mode becomes active.

#### S Curve Check

##### Connection:

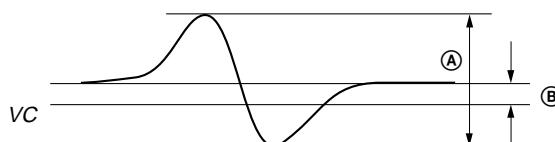

##### Checking Method:

1. After setting the BU electrical adjustment, place the test disc (PATD-012 or SATD-S5 or SATD-S4) on the tray and close the tray, then press the **AMS** dial.
2. At the completion of disc type check, "CD DETECT" will be displayed (for PATD-012 or YEDS-18).
- Note:** For the SATD-S5 or SATD-S4, "SACD DETECT" is displayed.
3. Press again the **AMS** dial, and the S curve waveform check mode will become active and "S-J1 MODE" will be displayed.
4. Connect an oscilloscope to the TP506 (FE) and TP504 (AVC) on the MAIN board.
5. Check that the level **A** and **B** of waveform on the oscilloscope satisfy the specification.

##### Specified Value:

Disc	<b>(A)</b>	<b>(B)</b>
SATD-S5 or SATD-S4		
PATD-012 or YEDS-18	0.7 to 1.7 Vp-p	- 0.1 to +0.1V

*S curve waveform*

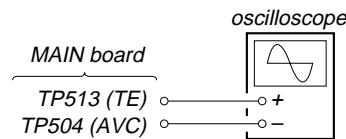

**Note:** For easier observation of this waveform, extend the sweep time and raise the brightness.

**Checking and Connecting Location : See page 68.**

### Traverse Check

##### Connection:

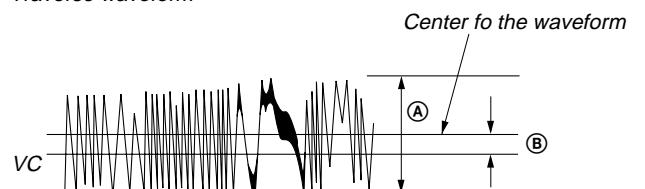

##### Checking Method:

1. Under the condition of S curve waveform check mode in step 5, press the **AMS** dial.
2. After "WAIT" is displayed, the traverse waveform check mode will become active and "TRAVERSE MODE" will be displayed.
3. Connect an oscilloscope to the TP513 (TE) and TP504 (AVC) on the MAIN board.
4. Check that the level **(A)** and **(B)** of waveform on the oscilloscope satisfy the specification.

##### Specified Value:

Disc	<b>(A)</b>	<b>(B)</b>
SATD-S5 or SATD-S4		
PATD-012 or YEDS-18	0.9 to 1.5 Vp-p	- 0.1 to +0.1V

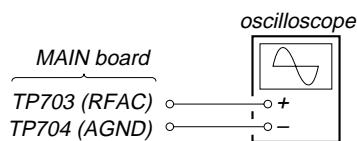

*Traverse waveform*

**Checking and Connecting Location : See page 68.**

## RF Level Check

Connection:

### Checking Method:

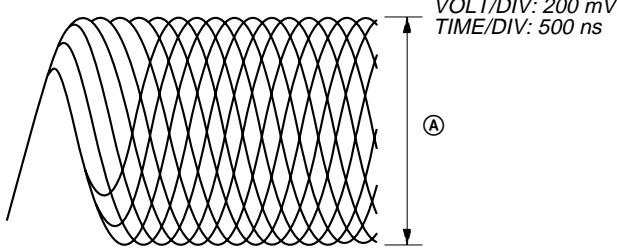

- Under the condition of traverse waveform check mode in step 4, press the **[<<AMS>>]** dial.
- Connect an oscilloscope to the TP703 (RFAC) and TP704 (AGND) on the MAIN board.
- After "WAIT" is displayed, the RF waveform check mode will become active and "PLAY 5th" will be displayed, and the 5th music on the disc will be played.
- Check that the RF waveform is clear and the level satisfies the specification.
- Press the **[<<AMS>>]** dial, and "GAISHU" will be displayed and the outward track of the disc will be played.
- Check that the RF waveform is clear and the level satisfies the specification.
- Press the **[<<AMS>>]** dial, and "NAISHU" will be displayed and the inward track of the disc will be played.
- Check that the RF waveform is clear and the level satisfies the specification.
- After checking, press the **[<<AMS>>]** dial, and the test is over when "BU MEASURE" is displayed.
- Press the **[OPEN/CLOSE]** button to open the tray, and remove the test disc.
- Using each type of disc, repeat from step 1 of S curve waveform check up to step 10 of RF level check.
- When the check is over, press the **[POWER]** button to turn the power off.

**Note:** Take care not to leave the test disc in the set.

### Specified Value:

Disc	Ⓐ
SATD-S5 or SATD-S4	
PATD-012 or YEDES-18	0.9 to 1.5 Vp-p

RF signal waveform

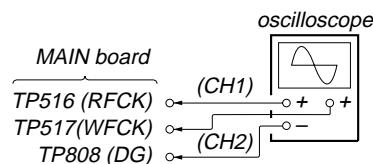

**Note:** Clear RF waveform refers to the waveform where Ⓛ shapes should be distinctively observed in the center.

Checking and Connecting Location : See page 68.

## CLV Jitter Check (CD only)

Connection:

### Checking Method:

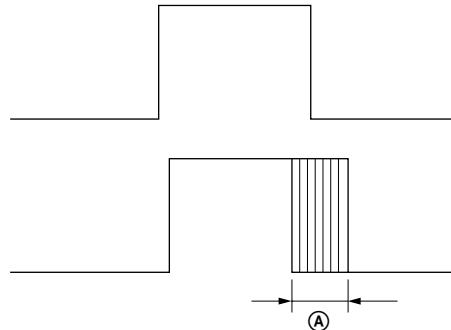

- Set the test mode.
- Connect an oscilloscope to the TP516 (RFCK) (CH1), TP517 (WFCK) (CH2) and TP808 (DG) (GND) on the MAIN board.
- Place the test disc PATD-012 or YEDES-18 on the tray, and close the tray.
- Rotate the **[<<AMS>>]** dial to select "61 DISC DETECT", and press the **[<<AMS>>]** dial to enter. Then, the disc type will be judged.
- Check that the disc type has been judged.  
(For the PATD-012, "DSKMOD CD" will be displayed. Refer to the test mode, DISC DETECT command (page 55))
- Rotate the **[<<AMS>>]** dial to select "86 ALL SRV ON", and press the **[<<AMS>>]** dial. Then, the disc will rotate, automatic adjustment will be carried out, and all servos will be turned on.
- Rotate the **[<<AMS>>]** dial to select "07 DSP MON3", and press the **[<<AMS>>]** dial to enter.
- Check that the value Ⓐ of waveform on the oscilloscope satisfies the specification.
- Rotate the **[<<AMS>>]** dial to select "19 ALL SRV OFF", and press the **[<<AMS>>]** dial. Then, all servos will be turned off and the disc rotation will stop.
- Press the **[OPEN/CLOSE]** button to open the tray, and remove the test disc.
- Press the **[POWER]** button to turn the power off.

**Note:** Take care not to leave the test disc in the set.

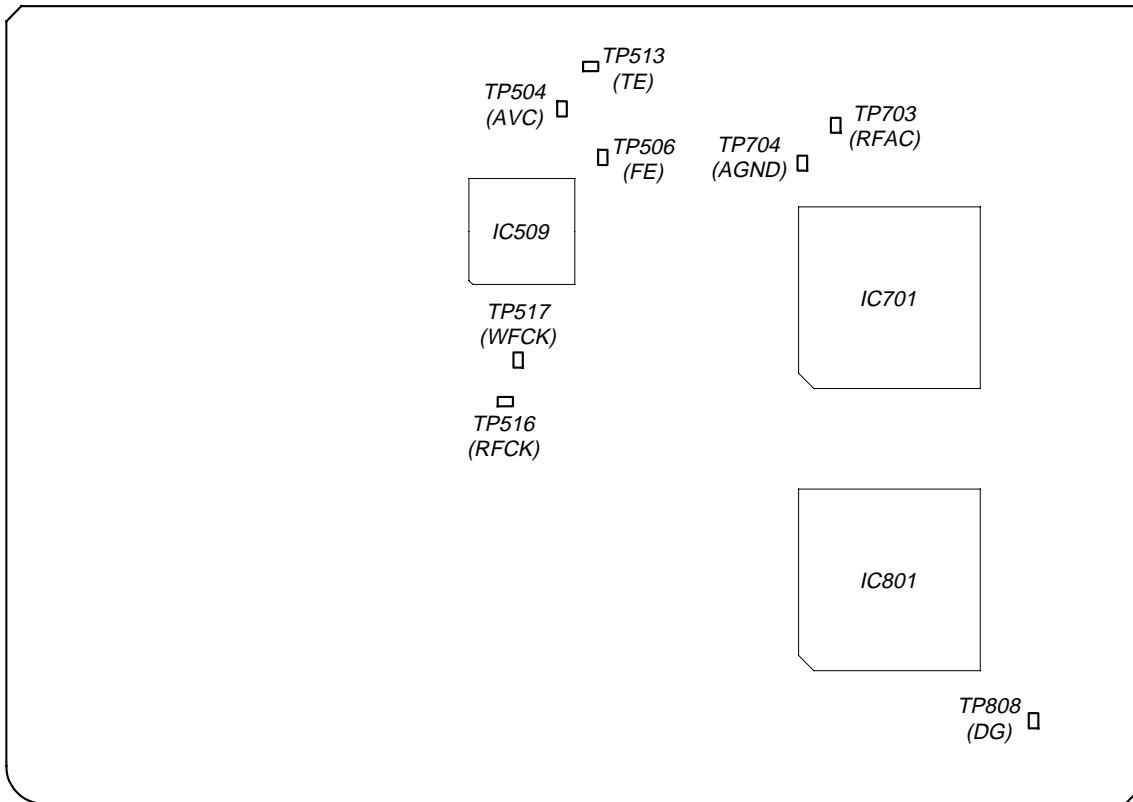

### Specified Value:

Disc	Ⓐ
PATD-012 or YEDES-18	50 μsec or less

CLV jitter waveform

Checking and Connecting Location : See page 68.

**Checking and Connecting Location:****- MAIN Board (Component Side) -**

## SECTION 7

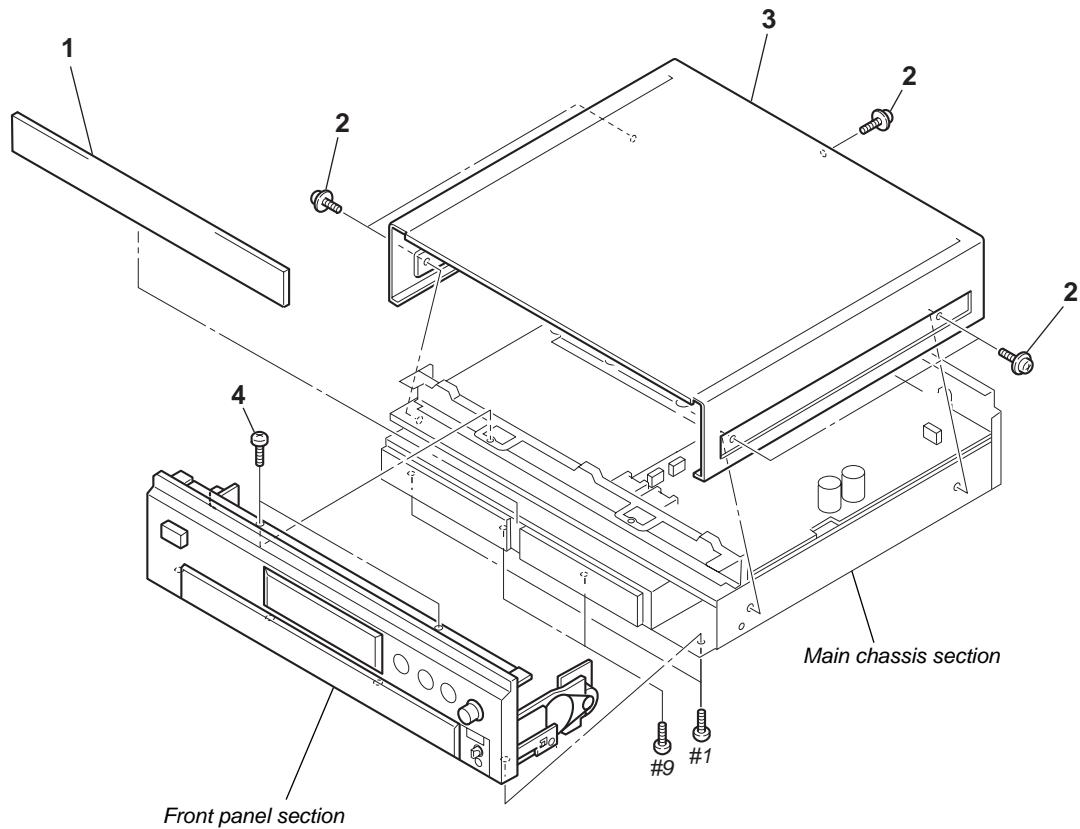

### EXPLODED VIEWS

**NOTE:**

- -XX, -X mean standardized parts, so they may have some differences from the original one.
- Items marked “\*” are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

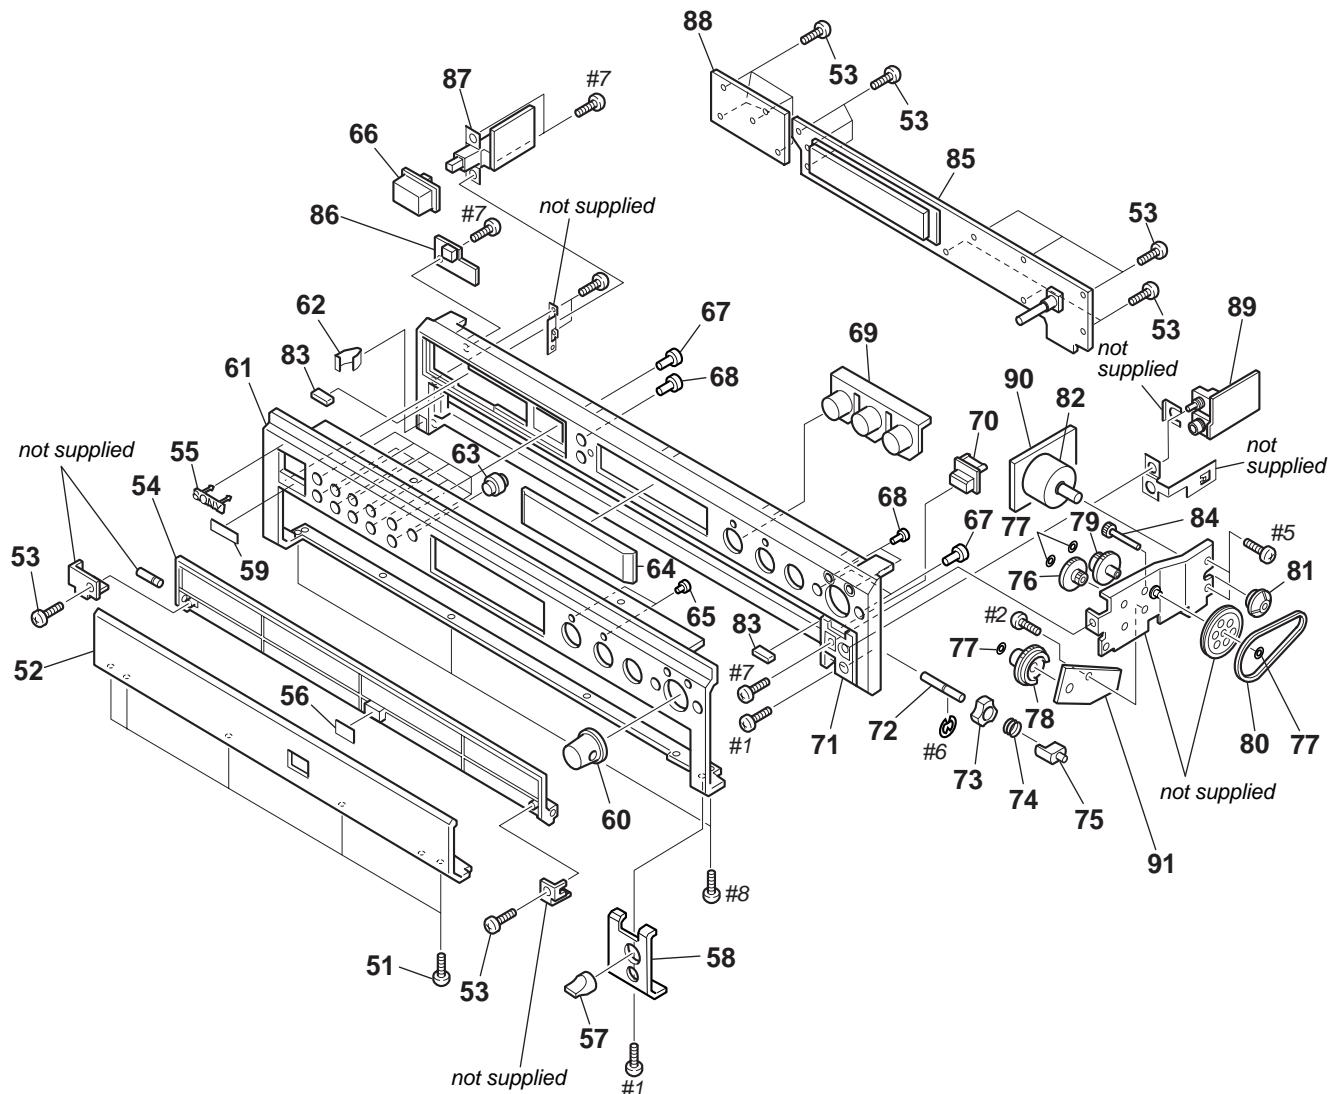

The components identified by mark  $\triangle$  or dotted line with mark  $\triangle$  are critical for safety. Replace only with part number specified.

Les composants identifiés par une marque  $\triangle$  sont critiques pour la sécurité.  
Ne les remplacer que par une pièce portant le numéro spécifié.

The components identified by mark △ or dotted line with mark △ are critical for safety.  
Replace only with part number specified.

Les composants identifiés par une marque △ sont critiques pour la sécurité.  
Ne les remplacer que par une pièce portant le numéro spécifié.

# SCD-C555ES

The components identified by mark  $\triangle$  or dotted line with mark  $\triangle$  are critical for safety.  
Replace only with part number specified.

Les composants identifiés par une marque  sont critiques pour la sécurité.  
Ne les remplacer que par une pièce portant le numéro spécifié.

The components identified by mark △ or dotted line with mark △ are critical for safety.  
Replace only with part number specified.

Les composants identifiés par une marque △ sont critiques pour la sécurité.  
Ne les remplacer que par une pièce portant le numéro spécifié.
