## Service Manual for M13+TB124ON

### PART I. Servicing Precautions

While working, the unit is with ultra high voltage about 25KV inside. So, to avoid the risk of electric shock, be careful to adjust the chassis!

1. Only qualified personnel should perform service procedures.
2. All specification must be met over line voltage ranger of 110V AC to 240V AC 50Hz/60Hz.
3. Do not operate in WET/DAMP conditions.
4. Portions of the power supply board are hot ground. The remaining boards are cold ground.
5. Discharge of CRT anode should be done only to CRT ground strap.
6. When fuse blow, ensure to replace a fuse with the same type and specification.
7. Keep the wires away from the components with high temperature or high voltage.
8. When replacing the resister with high power, keep it over the PCB about 10mm.
9. The CRT anode high voltage has been adjusted and set in the factory. When repairing the chassis, do not make the high voltage exceed 27.5KV (The beam current is 0uA). Generally, the high voltage is set on  $25.5\text{KV} \pm 1.5\text{KV}$  (The beam current is 700uA).  
\* The values of parameters above are for information only.
10. Before return the fixed unit, do check all the covering of wires to ensure that not fold or not short with any metal components. Check the entire protection units, such as control knobs, rear cabinet & front panel, insulation resister & capacitor, mechanical insulators and so on.
11. There are some mechanical and electrical parts associating with safety (EMC) features (Generally related to high voltage or high temperature or electric shock), these features cannot be found out from the outside. When replace these components, perhaps the voltage and power suit the requirements, but efficient X-ray protection may not be provided. All these components are marked with  $\Delta$  in the schematic diagram. When replace these, you'd better look up the components listed in this manual. If the component you replaced not has the same safety (EMC) performance, harmful X-ray may be produced.

## PART II. Product Specification

### 1. Ambient conditions:

1.1 Ambient temperatures:

- a. Operating: -10°C ~ +40°C
- b. Storage: -15°C ~ +45°C

1.2 Humidity

- a. Operation: < 80%
- b. Storage: < 90%

1.3 Air pressure: 86kpa ~ 106kpa

### 2. M13 Chassis Specification

#### 2.1 Key Parameters

Decode IC	TB1240N
CPU	M13 TMP87PS38N
Chassis Size	330×330 (mm×mm)

#### 2.2 System

PAL (TV)	Yes
NTSC (TV)	Optional
SECAM (TV)	Optional
AV IN	PAL, NTSC, SECAM (Optional)
Sound System	B/G, D/K, I, M/N
Receiving channels	48.25MHz — 463.25MHz (Hyper band) 471.25MHz — 855.25MHz (UHF)
Scanning lines and frequencies	525/625 lines 15.625kHz/15.75kHz 50/60Hz
Color sub carrier	4.433MHz/3.579MHz

#### 2.3 Picture

Digital Comb Filter	PAL & NTSC
Velocity Modulation	Yes
Black Stretch Circuit	Yes
Picture Effect	Yes
Picture Adjustment	Yes
Intermediate frequencies	38.0MHz or 38.9MHz*

\* The IF (picture & sound) may vary with the model of TV sets.

#### 2.4 Sound

NICAM	Multi System
German Stereo	Optional

AV Stereo	Yes
Digital Audio Balance	Optional
Treble and Bass Adjustment	Optional
Balance	Optional
BBE	Optional
ALC (AVL)	Optional
External Super Woof Box	Optional
Sound Effect	Optional
Intermediate frequencies	4.5/5.5/6.0/6.5MHz

#### 2.5 Function

Teletext	4Pages (western character)
Super Receive	Optional
Watch with Time Limitation	Yes
Bookmark	Yes
No-signal Background	Blue Background or Natural Noise Background
Power Voltage display	Optional
Shut Down	Standby/Shut down with relay/Flip Switch
Timer	Turn on/off automatically
Sleep timer	10-20 minutes with 10M.increment

#### 2.6 Other

AV RCA IN	Two Input at Most (front & side)
AV RCA OUT	Yes
S Terminal	Yes
Scart Socket	Single
Tuner	Voltage Synthesizer
Aerial input impedance	75Ω unbalanced din jack ant.input75
Power Voltage	AC 110V~240V 50/60Hz
OSD Language	Chinese & English
Presettable program	100 Programs
Product safety requirement	IEC65
Product EMC/EMI requirement	IEC106

Specification	Scart	RCA
Video input 75 Ω	1Vp-p	1Vp-p
Audio input 10k Ω (R+L)	0.5Vrms	0.5Vrms
Video output 75 Ω	1Vp-p	1Vp-p
Audio output 1k Ω (R+L)	0.5Vrms	0.5Vrms
RGB input 75 Ω	0.7Vp-p	
Audio line output 1k Ω	1Vp-p	

\* Design and specifications are subject to change without prior notice for the purpose of performance improvement.

### PART III. Brief Introduction on Chassis

The circuit of M13+TB1240 mainly consists of the following parts: tuner, IF channel, video detector, color decoding, luminance & matrix circuit, demodulation & power amplification for sound, sync separation, horizontal & vertical scan, microcontroller, remote control receiver & transmitter, EHT generated circuit, switched-mode regulated power supply, flat square self-convergence color tube. (See Fig.1)

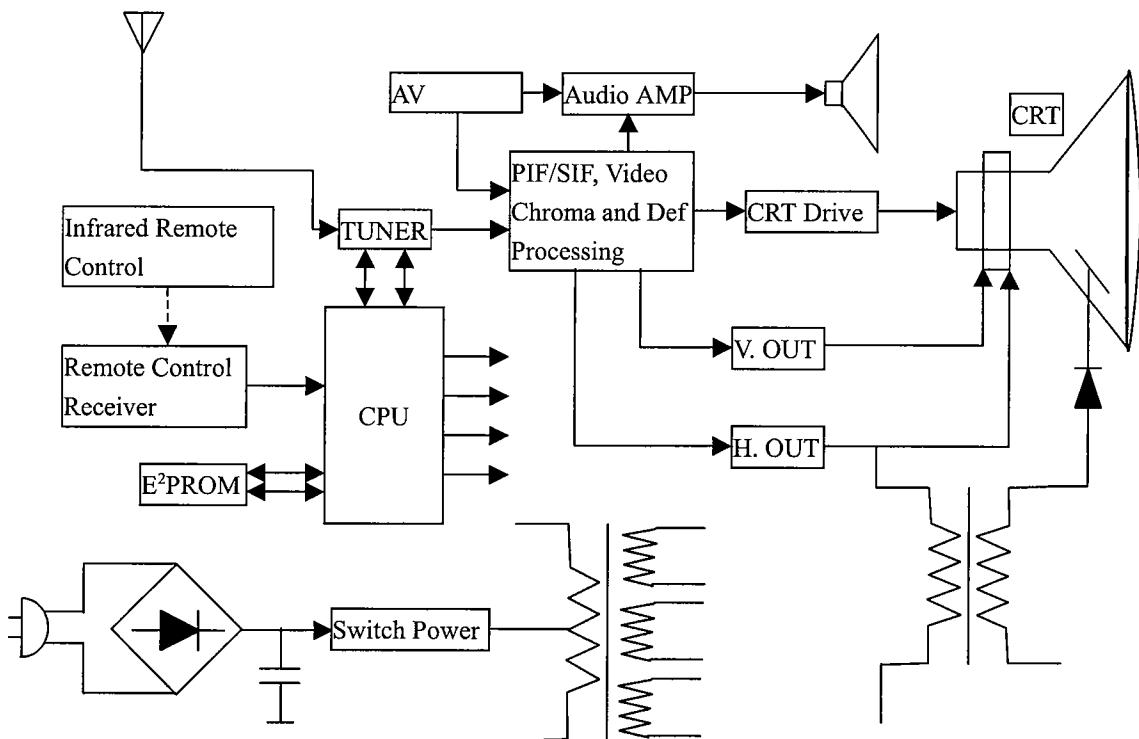

Fig.1 M13+TB1240N

#### (1) Tuner

The function of the tuner is to select the channel to be received and suppress the interference, to amplify the high frequency signal, to improve the receiving sensitivity and SNR, to generate PIF signal through frequency conversion.

#### (2) IF Channel

The IF Channel mainly ensures the sensitivity and selectivity of the complete machine. The IF AMP integrated in TB1240N is made up of the third-stage dual-differential amplifier with gain value above 70db, SNR of 55dB and bandwidth of 7MHZ. The video demodulation circuit is made from the built-in PLL Sync Detector. The spectrum of the demodulation carrier is unitary and not affected by the content of the video signal. The tuner features stable receptivity while the signal output from the video detector features high fidelity.

PLL built-in TB1240N generates 38.0MHZ or 38.9MHz demodulation reference signal for sync detector to demodulate the video signal, which is called 'PLL sync demodulation'.

## **(3) Chroma Signal Decoding Circuit**

Through the external BPF (band-pass filter) to single out the chroma signal and burst signal within the range of  $f_{sc}+1.3\text{MHZ}$  from among the composite signals output from the video detector. After being amplified by ACC, the chroma signal is fed into the synchronous detector to be demodulated to obtain the color difference signal.

## **(4) Luminance Channel and Matrix Circuit**

The luminance channel of TB1240N has the black stretch circuit to make the ‘darkish’ ingredient of the picture turn ‘atrous’, thus improve the contrast and depth perception of the picture. It also has the delayed definition-enhanced circuit to enable the details of the picture more vivid. The luminance signal (Y) is sent into the matrix circuit after being delayed for  $0.6\mu\text{s}$  and composes R/G/B signal combined with three color-difference signals (B-Y, R-Y, G-Y).

## **(5) Sync Separation and Deflection Processing Circuit**

TB1240N has the 32fh PLL ( $f_h$  = horizontal frequency). In accordance with the frequency and phase information carried by composite sync signal, PLL generates scan clock signal with 32fh and horizontal drive pulse will be obtained through 32fh countdown. Use integrating circuit to extract vertical sync signal from the composite sync pulse to control the counter for vertical countdown. The counter countdown the 32fh clock signal, thus vertical frequency sync pulses under various systems can be obtained.

TB1240N includes the vertical SW former (sawtooth wave former) and can control the gain and linear of SW (sawtooth wave). Therefore, the vertical amplitude control and the linearity correction of the scanning raster can be achieved by setting the data with remote controller via I<sup>2</sup>C bus input.

## **(6) Sound Channel**

Use external ceramic filter to select the second SIF signal for the sound channel of TB1240N from the signal output from the video detector. Obtain audio signal after limiting amplification and demodulation by frequency detector for SIF signal, and then output the audio signal to IC TDA2616Q to drive the speaker to restore the sound. Built in the TB1240N, both frequency detector and volume-control attenuator are set and adjusted via I<sup>2</sup>C bus.

## **(7) Remote Control System**

The MCU (TMP87PS38N) of an 8-bit CPU and the software TCL M13 constitute the control core of the remote control system, mainly accomplishing the following functions: decoding remote control commands; auto search memory; displaying characters & patterns; switching the signal source between AV and TV.

Infrared remote control transmitter is composed of the special single chip (TC-9028F) and the keyboard system. The transmitter translates the commands represented by R/C keys into function codes, and separately demodulates the 37.9KHZ carrier and 940nm infrared ray twice to generate remote infrared transmitting signal delivered by infrared LED. The remote control distance isn't less than 8 meters.

With infrared LED the remote control system converse the optical signal into electrical signal, which will be amplified and decoded to restore the codes of the remote control commands for MCU to analyze and execute.

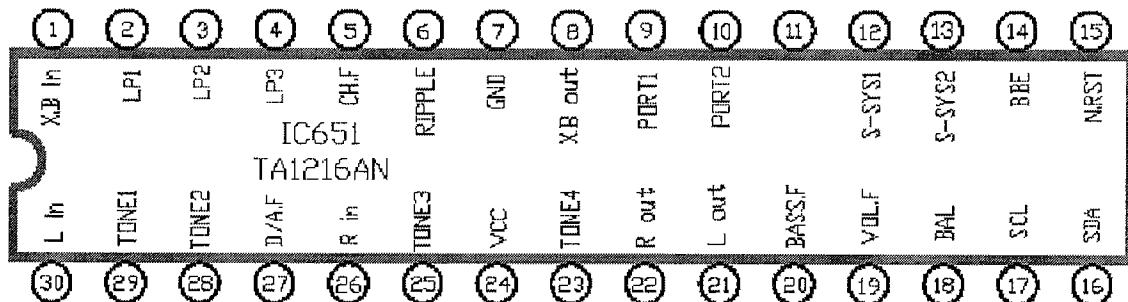

The remote control system has three operating modes: user-controlled mode (U-mode), service mode (S-mode) and factory default mode (D-mode). U-mode includes the following functions: channel search and memory; teleview and channel selecting; volume control, brightness adjustment, contrast and color adjustment. S-mode and D-mode are mainly used in production, checking & repairing, including the following functions: horizontal & vertical centering control, vertical amplitude and linearity adjustment; setting the adjusting range for volume, contrast, brightness, tint and color; geometric adjustment and white balance adjustment.

## (8) CRT Drive Circuit

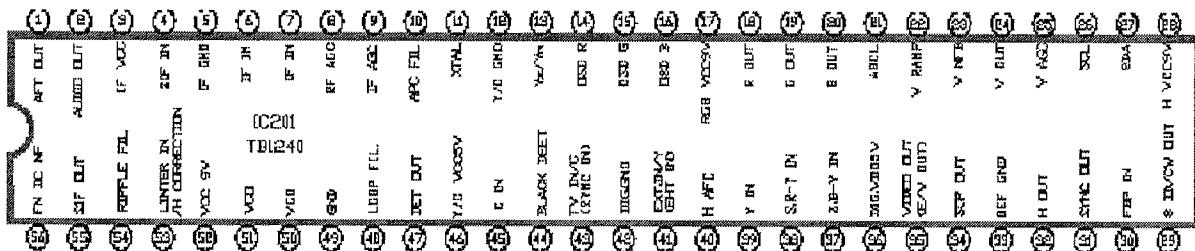

Adopting the cascode to amplify voltage and current of R/G/B signal, the CRT drive circuit is able to demodulate the cathode beam current of the CRT. The R/G/ B signal input into the cascode circuit is of negative polarity.

## (9) Power Supply Circuit

The circuit supplies various stabilized operating voltages and safeguard protections.

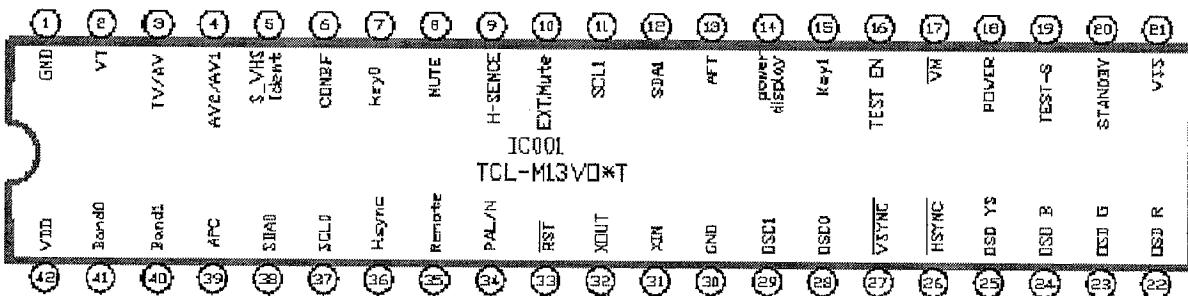

**PART IV. IC Pin Description**

Pin No	Pin Name	Function
1	W-channel input	Audio signal input pin. Inputs woofer signal.
2	LP1	
3	LP2	Pins for connecting external capacitors for woof channel signal LPF.
4	LP3	
5	W-channel filter	Pins for connecting capacitors to smooth control current.
19	Volume filter	
6	Ripple filter	Pin for connecting capacitors to reject ripples in supply voltage of 9V.
7	GND	GND pin
8	W-channel output	
21	L-channel output	Pins for audio signal output.
22	R-channel output	
9		
10	Input ports	Pins for outputting signals to micro-controller by I <sup>2</sup> C bus
11	W-channel offset filter	Pins for rejecting offset of woofer channel.
12		
13	Output ports	Switches controlled by I <sup>2</sup> C. Open collector output.
14		
15	Output ports	Switches controlled by I <sup>2</sup> C. Ternary output.
16	SDA	I <sup>2</sup> C bus SDA pin
17	SCL	I <sup>2</sup> C bus SCL pin
18	Balance filter	Pin for connecting capacitor to smooth control current.
20	Bass filter	
27	Treble filter	Pins for connecting capacitors to smooth control current.
23	R-channel LPF	
28	L-channel LPF	Pins for connecting external capacitors for bass control LPF for R- and L-channel signal.
25	R-channel HPF	
29	L-channel HPF	Pins for connecting external capacitors for treble control HPF for R- and L-channel signal.
26	R-channel input	
30	L-channel input	Audio signal input pins. Input R- and L-channel signals.
24	Vcc	Power pin. Recommended supply voltage is 9V.

Pin No	Pin Name	Function
1	AFT out	The terminal for AFT output and Self-adj. output.
2	Audio out	The terminal for Audio output
3	IF Vcc (9v)	The terminal for Vcc of PIF circuit
4	SIF in	The terminal for SIF signal input
5	IF GND	The terminal for GND of PIF circuit
6	IF in	The terminal for IF signal input
8	RF AGC	The terminal for RF AGC output (Open corrector Output)
9	IF AGC	The terminal to be connected with an IF AGC filter
10	APC filter	The terminal to be connected with APC filter for chroma demodulation.
11	XTAL	The terminal to be connected with a 4.43MHz X'tal oscillators
12	Y/C GND	The terminal for GND of Y/C circuit
13	Ys/Ym	The terminal for switching of fast Half Tone and Analog RGB Mode.
14	OSD R	The terminal for analog R/G/B signal input
15	OSD G	
16	OSD B	
17	RGB Vcc9V	The terminal for Vcc of RGB circuit (Text circuit).
18	R out	The terminal for analog R/G/B signal output
19	G out	
20	B out	
21	ABCL	The terminal for ABL/ACL control
22	V. Ramp	The terminal to be connected with a capacitor to make V. Ramp signal
23	V. NFB	The terminal for Input of v. sawteeth signal feedback
24	V out	The terminal for vertical drive signal output
25	V AGC	The terminal to be connected with a capacitor for V AGC.
26	SCL	The terminal for input of I <sup>2</sup> C bus clock
27	SDA	The terminal for input/output of I <sup>2</sup> C bus data
28	H Vcc9V	The terminal for Vcc of deflection circuit
29	S ID/CW out	PAN/NTSC ID output and SECAM ID input. And chroma sub-carrier frequency is switched by bus.
30	FBP in	The terminal for FBP input
31	SYNC out	The terminal for composite sync. Output (Open corrector output)
32	H out	The terminal for out of horizontal drive signal

33	DEF GND	The terminal for GND of deflection circuit
34	SCP out	The terminal for Sand castle pulse (VD+HD+Gp) output
35	EW out	The terminal for E-W out.
36	DIG VDD 5V	The terminal for VDD of digital block.
37	B-Y/S.B-Y in	The terminal for component B-Y/R-Y signal input and SECAM B-Y/R-Y signal input
38	R-Y/S.R-Y in	
39	Y in	The terminal for Y input
40	H.AFC	The terminal to be connected with H.AFC filter
41	EHT in	The terminal for EHT.
42	DIG.GND	The terminal for GND of digital block
43	Sync. in	The terminal for input of the synchronous separation circuit.
44	Black DET	The terminal to be connected with black DET. filter
45	Ext. C in	The terminal for input of chroma signal.
46	Y/C Vcc5V	The terminal for Vcc of Y/C circuit
47	IF DET OUT	The terminal for output of composite video signal and SIF signal detected in IF circuit
48	LOOP FIL.	The terminal to be connected with loop filter for IF PLL
49	GND	The terminal for GND of VCO and SIF circuit
50	VCO	The terminal to be connected with a tank coil for IF VCO
51		
52	Vcc9V	The terminal for Vcc of IF VCO and SIF
53	Limiter in/H.correction	The terminal for SIF signal input and H. curve correction
54	Ripple FIL	The terminal to be connected with a capacitor to stabilize the performance of SIF injection-lock circuit
55	SIF out	The terminal for output of 2'nd SIF signal that is beaten down by the regenerative carrier.
56	FM DC NF	The terminal for FM DC negative feedback and AGC Filter for L-SECAM.

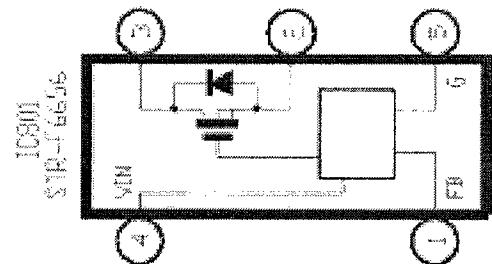

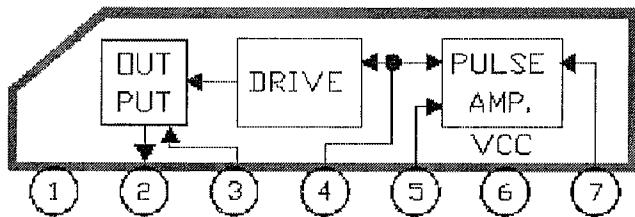

Pin No	Pin Name	Function
42		

# Service Manual 10

1	GND	
21	Vss	
30	GND	The terminal for Ground
2	VT	The terminal for VT output
3	TV/AV	The terminal for TV and AV switch
4	AV2/AV1	The terminal for AV1 and AV2 switch
5	S-video	S-video signal ident
6	Comb.F	The terminal to be connected with a comb. filter
7	Key0	
15	Key1	Local key input detection 0/1
8	Mute	The terminal for mute
9	H-Sence	The terminal for high sensitive receiving.
10	Ext-mute	Extern mute
11	SCL1	I <sup>2</sup> C bus clock output 1
12	SDA1	I <sup>2</sup> C bus data output 1
13	AFT	AFT input
14	Power display	The terminal for supply voltage detection
16	Test-en	Enable the test signal
17	VM	Victory Modulation
18	Power	The terminal for AC power off
19	Test-S	The terminal for adjustment
20	Standby	The terminal for standby.
22	OSD R	
23	OSD G	
24	OSD B	OSD R/G/B signal output
25	OSD YS	OSD Y signal output
26	HD	
27	VD	OSD HD/VD signal input
28	OSC1	
29	OSC2	The terminal to be connected with OSD oscillator
31	X IN	
32	X OUT	The terminal to be connected with a 8MHz oscillator.
33	RST	The terminal for reset signal input.
34	PAL/N	The terminal for PAL and NTSC switch
35	Remote	The terminal for signal input from remote control
36	H.SYNC	The terminal for horizontal sync signal input
37	SCL0	I <sup>2</sup> C bus clock output 0
38	SDA0	I <sup>2</sup> C bus data output 0
39	APC	N/A
40	Band1	
41	Band0	The terminal for band 1/0 output
42	VDD	The terminal to be connected with 5V power supply.

## PART V. Adjusting Description

The TB1240+TCLM13 is designed as the I2C bus controller for the 25• (or above) TV set. We use the Toshiba TB1240N single chip as the color signal decoder and we also have developed the M13 control software for Toshiba CPU. Please take notice that programming the M13 software into the Toshiba TMP87PS38N chip by OTP method when trial-produce and using the mask chips after trial-produce. As the I2C bus is used in this chassis, we can adjust the chassis easily by the remote handset and some items can be adjusted by special apparatus automatically. The TB1240N has some differences from the TB1231 that the pincushion correction, horizontal amplitude and IF VCO can be adjusted by remote handset or be adjusted automatically. Of course• the screen voltage and the focus voltage must be adjusted by hand as before.

To deal with the problems happened during the production, please read this manual carefully and master the character.

There are two adjustment modes: user-mode and D-mode. The former is for home customers, the latter is for advanced adjustment only in manufactory while production and reparation. When in user-mode, the adjustment can be done by the remote handset or the front control panel, but when in D-mode, the adjustment must be done by the remote handset.

Press the • VOL• • key on the front control panel until the volume is set to 0, at the same time(don• t release the volume key), press the • DISPLAY• •button on the remote handset for 3 times quickly, the character • D• will display on the right up screen to indicate that the D-mode is enabled. Now the shortcut buttons on the factory remote handset can be used. • Remark: the user remote handset can be used also, but it is mainly for reparation. Press • STANDBY• •button to exit the D-mode, but keep the system values in menu 7 as presetting. • If values changed, they will be memorized. During the production, please set the • BIT-0• •in • MODE2• •to • 1• ; so that the D-mode can be enabled by the • D-mode• •button on the remote handset directly. Remember: set the • BIT-0• •in • MODE2• • to 0 and shut down before packing to exit the D-mode forever.

Press the • BUS OFF• •button on the factory remote handset to halt the communication between CPU and I2C bus, then, the white balance and the geometry auto-adjustment can be done.

### Adjusting method:

No	Item	Adjusting component & Item	Recommend Value	Signal and other conditions	Method
1	Screen voltage	Screen VR knob on the FBT		(Set the • R/G/B CUT• •to 80)	Press the • mute• •button on the R/C to stop the vertical scan. The screen will display a horizontal line. Adjusting the screen VR knob until the line just visible.
2	Focus voltage	Focus VR on the FBT		Crosshatch signal. Input from AV or TV	Adjusting the focus VR knob until the horizontal and vertical lines are the

# Service Manual 14

3	VCO IF	"VCO" button		The difference of VCO should not be great	Press the "ALT" button on the R/C and wait for about 5s. The "VCO ALIGN OK" will display on the screen to indicate the success, otherwise the "VCO FAILURE" will display to indicate the failure. Adjust the VCO coil and try again.
4	KEY 2 (PAL)	VPOS50 (V.Position) HIGH50 (V.Height) VLIN50 (V.Linearity) VSC50 (V.S-Correction) OSD50 (OSD Position)	03 20 03 05 20	Crosshatch signal Any input PAL	Adjust the values with R/C till the size of grids in the center and the edge is the same, the vertical center is right, and the vertical position of PAL OSD is right. Default is the recommended value.
5	KEY 3 (NTSC)	VPOS60 (V.Position) HIGH60 (V.Height) VLIN60 (V.Linearity) VSC60 (V.S-Correction) OSD60 (OSD Position)	00 06 01 07 89	Crosshatch signal Any input NTSC	Adjust the values with R/C till the size of grids in the center and the edge is the same, the vertical center is right, and the vertical position of NTSC OSD is right. Default is the recommended value.
6	KEY 4 (PAL)	HPOS50 (H.Position) HSIZE50 (H.Amplitude) PARA50 (Pincushion alignment) TRAP50 (trapeze) CORN50 (Corner correction) VEHT50 (V.amp EHT) HEHT50 (H.amp EHT)	0D 1C 15 12 0F 07 01	Checker signal  Input: any PAL	Adjust the values with R/C till the vertical lines in the center and the edge are really vertical, the horizontal center and amplitude are right. VEHT and HEHT are used for stabilizing the horizontal and vertical amplitude while bright/dark changing. Adjust the two items till the change of amplitude of black/white grids is the minimum. Having adjusted VEHT and HEHT, fine adjustment should be done to the horizontal and vertical amplitude.

7	KEY 5 (NTSC)	HPOS60 (H.Position)	04	Checker signal  Input : any  NTSC	Adjust the values with R/C till the vertical lines in the center and the edge are really vertical, the horizontal center and amplitude are right. VEHT and HEHT are used for stabilizing the horizontal and vertical amplitude while bright/dark changing. Adjust the two items till the change of amplitude of black/white grids is the minimum. Having adjusted VEHT and HEHT, fine adjustment should be done to the horizontal and vertical amplitude.

11	KEY -- (sharpness adjustment)	SHPTV3	22	Crosshatch signal	Adjust the items to the recommend value by the remote handset.
		SHPAV3	22		
		SHPTV4	16		
		SHPAV4	16		
		SHPX	12		
		SHPN	3F		
12	KEY 6 (Status adjustment)	RFAGC	25	TV Input Grey Scale + Color Bar 60dB	Refer to the recommended value for HAFC setting; For the PIFAKT value is set by the AFT button on the factory remote handset, don't change it as one's like. Adjust RFAGC till the noise dots are critical. When the SECAM system is available, adjust S-B-Y and S-R-Y to make the chroma of color bar best.
		PIFAFT	50		
		HAFC	00		
		S-B-Y	08		
		S-R-Y	08	Sine Signal 1KHz AV Input	<p>① Set the volume to 80. Input 0.5Vrms signal. Measure the level of speaker with db meter and oscilloscope. Record the level Vm (dB).</p> <p>② Set the volume to 5. Adjust the VOLO5 to make the speaker level 58dB lower than Vm. Set the volume to 25. Adjust the VOLO25 to make the speaker level 30dB lower than Vm.</p>
		VOLO5 (The loudness when volume is set to 5)	0E (TDA2616Q)		
		VOLO25 (The loudness when volume is set to 25)	25 (TDA2616Q)		

13	KEY 1 (White Balance)	R CUT (Red cutoff)	80	Grey Scale Signal  PAL	If we use the white balance meter, the RCUT, GCUT and BCUT are for black balance; the GDRV and BDRV are for white balance.  If no white balance meter, do it as follows: ① Decrease the G CUT value ② Adjust the B CUT value ③ Press the V button on the R/C to pause the vertical scan ④ Observe the color of horizontal line ⑤ Continue the vertical scan ⑥ Repeat the step2-5 until the horizontal line is violet ⑦ Adjust the G CUT value ⑧ Repeat ③、④、⑤、⑦ until the horizontal line is white ⑨ Observe the brighter bar. Adjust G DRV and B DRV till the bright white bar is pure white.  Remark: Repeat pressing the PROG button and the item will alternate recurrently.
		G CUT (Green cutoff)	80		
		B CUT (Blue cutoff)	80		
		G DRV (Green drive)	40		
		B DRV (Blue drive)	40		

Remark: A: The items which can be adjusted automatically by apparatus in line don't need adjusting by hand anymore.

B: There are difference between PAL geometry (OSD) adjustment and NTSC geometry (OSD) adjustment. So do the PAL adjustment, then the NTSC.

C: When "D-MODE" is enabled, press the "AV/TV" button on the R/C, the chassis will provide a group of build-in signal (PAL & NTSC) for reparation.

System setting:

## PART XI. Safety & EMC Components

In order to guarantee the safety & EMC of the product, ensure to replace the following components with ones that have the same type and specification.

Safety Component

No.	Name	Location No.
1	Isolating Resistor	R835
2	Isolating Capacitor	C835
4	Degaussing Coil	L803
5	Switch Transformer	T801 T802
6	Flyback Transformer	T461
7	CRT Base	S501
8	Fuse	F801
9	Power Switch	S801
10	Power Cord	P801
11	PCB	PCB

EMC Component

No.	Name	Location No.
1	Tuner	TU101
2	Oscillator	T271
3	Rectifier Diode	D831 D832 D833 834 804
4	Power Filter	T801
5	SAW Filter	Z141
6	Switch Transformer	T802
7	Ferrite	L801

## PART XII. Change Record
