# SAFETY PRECAUTIONS

1. Before returning an instrument to the customer, always make a safety check of the entire instrument, including, but not limited to, the following items:

- a. Be sure that no built-in protective devices are defective and/or have been defeated during servicing. (1) Protective shields are provided on this chassis to protect both the technician and the customer. Correctly replace all missing protective shields, including any removed for servicing convenience. (2) When reinstalling the chassis and/or other assembly in the cabinet, be sure to put back in place all protective devices, including, but not limited to, nonmetallic control knobs, insulating fishpapers, adjustment and compartment covers/shields, and isolation resistor/capacitor networks. **Do not operate this instrument or permit it to be operated without all protective devices correctly installed and functioning. Servicers who defeat safety features or fail to perform safety checks may be liable for any resulting damage.**
- b. Be sure that there are no cabinet openings through which an adult or child might be able to insert their fingers and contact a hazardous voltage. Such openings include, but are not limited to, (1) spacing between the picture tube and the cabinet mask, (2) excessively wide cabinet ventilation slots, and (3) an improperly fitted and/or incorrectly secured cabinet back cover.
- c. **Antenna Cold Check** — With the instrument AC plug removed from any AC source, connect an electrical jumper across the two AC plug prongs. Place the instrument AC switch in the on position. Connect one lead of an ohmmeter to the AC plug prongs tied together and touch the other ohmmeter lead in turn to each tuner antenna input exposed terminal screw and, if applicable, to the coaxial connector. If the measured resistance is less than 1.0 megohm or greater than 5.2 megohm, an abnormality exists that must be corrected before the instrument is returned to the customer. Repeat this test with the instrument AC switch in the off position.
- d. **Leakage Current Hot Check** — With the instrument completely reassembled, plug the AC line cord directly into a 120V AC outlet. (Do not use an isolation transformer during this test.) Use a leakage current tester or a metering system that complies with American National Standards Institute (ANSI) C101.1 *Leakage Current for Appliances* and Underwriters Laboratories (UL) 1410, (50.7). With the instrument AC switch first in the on position and then in the off position, measure from a known earth ground (metal waterpipe, conduit, etc.) to all exposed metal parts of the instrument (antennas, handle bracket, metal cabinet, screwheads, metallic overlays, control shafts, etc.), especially any exposed metal parts that offer an electrical return path to the chassis. Any current measured must not exceed 0.5 milliamp. Reverse the instrument power cord plug in the outlet and repeat test. **ANY MEASUREMENTS NOT WITHIN THE LIMITS SPECIFIED HEREIN INDICATE A POTENTIAL SHOCK HAZARD THAT MUST BE ELIMINATED BEFORE RETURNING THE INSTRUMENT TO THE CUSTOMER OR BEFORE CONNECTING THE ANTENNA OR ACCESSORIES.**

e. **X-Radiation and High Voltage Limits** — Because the picture tube is the primary potential source of X-radiation in solid-state TV receivers, it is specially constructed to prohibit X-radiation emissions. For continued X-radiation protection, the replacement picture tube must be the same type as the original. Also, because the picture tube shields and mounting hardware perform an X-radiation protection function, they must be correctly in place.

High voltage must be measured each time servicing is performed that involves B+, horizontal deflection or high

voltage. Correct operation of the X-radiation protection circuits also must be reconfirmed each time they are serviced. (X-radiation protection circuits also may be called "horizontal disable" or "hold-down.") Read and apply the high voltage limits and, if the chassis is so equipped, the X-radiation protection circuit specifications given on instrument labels and in the *Product Safety & X-radiation Warning* note on the service data chassis schematic.

High voltage is maintained within specified limits by close-tolerance safety-related components/adjustments in the high-voltage circuit. If high voltage exceeds specified limits, check each component specified on the chassis schematic and take corrective action.

2. Read and comply with all caution and safety-related notes on or inside the receiver cabinet, on the receiver chassis, or on the picture tube.
3. **Design Alteration Warning** — Do not alter or add to the mechanical or electrical design of this TV receiver. Design alterations and additions, including, but not limited to circuit modifications and the addition of items such as auxiliary audio and/or video output connections, might alter the safety characteristics of this receiver and create a hazard to the user. Any design alterations or additions may void the manufacturer's warranty and may make you, the servicer responsible for personal injury or property damage resulting therefrom.
4. **Picture Tube Implosion Protection Warning** — The picture tube in this receiver employs integral implosion protection. For continued implosion protection, replace the picture tube only with one of the same type number. Do not remove, install, or otherwise handle the picture tube in any manner without first putting on shatterproof goggles equipped with side shields. People not so equipped must be kept safety away while picture tubes are handled. Keep the picture tube away from your body. Do not handle the picture tube by its neck. Some "in-line" picture tubes are equipped with a permanently attached deflection yoke; because of potential hazard, do not try to remove such "permanently attached" yokes from the picture tube.
5. **Hot Chassis Warning** — a. Some TV receiver chassis are electrically connected directly to one conductor of the AC power cord and may be safety serviced without an isolation transformer only if the AC power plug is inserted so that the chassis is connected to the *ground* side of the AC power source. To confirm that the AC power plug is inserted correctly, with an AC voltmeter measure between the chassis and a known earth ground. If a voltage reading in excess of 1.0V is obtained, remove and reinsert the AC power plug in the opposite polarity and again measure the voltage potential between the chassis and a known earth ground. b. Some TV receiver chassis normally have 85V AC (RMS) between chassis and earth ground regardless of the AC plug polarity. These chassis can be safety serviced only with an isolation transformer inserted in the power line between the receiver and the AC power source, for both personnel and test equipment protection. c. Some TV receiver chassis have a secondary ground system in addition to the main chassis ground. This secondary ground system is not isolated from the AC power line. The two ground systems are electrically separated by insulating material that must not be defeated or altered.
6. Observe original lead dress. Take extra care to assure correct lead dress in the following areas: a. near sharp edges. b. near thermally hot parts — be sure that leads and components do not touch thermally hot parts, c. the AC supply, d. high voltage, and e. antenna wiring. Always inspect in all areas for pinched, out-of-place, or trayed wiring. Do not change spacing between components, and between components and the printed-circuit board. Check AC power cord for damage.
7. Components, parts, and/or wiring that appear to have overheated or are otherwise damaged should be replaced with components, parts, or wiring that meet original specifications. Additionally, determine the cause of overheating and/or damage and, if necessary, take corrective action to remove any potential safety hazard.
8. **PRODUCT SAFETY NOTICE** — Some electrical and mechanical parts have special safety-related characteristics which are often not evident from visual inspection, nor can the protection they give necessarily be obtained by replacing them with components rated for higher voltage, wattage, etc. Parts that have special safety characteristics are identified by *shading* on schematics and by a (\*) in parts lists. Use of a substitute replacement that does not have the same safety characteristics as the recommended replacement part might create shock, fire, and/or other hazards. Products Safety is under review continuously and new instructions are issued whenever appropriate.

Prior to shipment from the factory, our products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

### ● Precautions during Servicing

1. Parts identified by the  symbol are critical for safety. Replace only with parts number specified.
2. In addition to safety, other parts and assemblies are specified for conformance with regulations applying to spurious radiation. These must also be replaced only with specified replacements.  
Examples: RF converters, RF cables, noise blocking capacitors, noise blocking filters, etc.
3. Use specified internal wiring. Note especially:
  - 1) Wires covered with PVC tubing
  - 2) Double insulated wires
  - 3) High voltage leads
4. Use specified insulating materials for hazardous live parts. Note especially:
  - 1) Insulation Tape
  - 2) PVC tubing
  - 3) Spacers
  - 4) Insulators for transistors.
5. When replacing AC primary side components (transformers, power cords, etc.), wrap ends of wires securely about the terminals before soldering.
6. Observe that wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.)
7. Check that replaced wires do not contact sharp edged or pointed parts.
8. When a power cord has been replaced, check that 10–15 kg of force in any direction will not loosen it.
9. Also check areas surrounding repaired locations.
10. Use care that foreign objects (screws, solder droplets, etc.) do not remain inside the set.
11. Crimp type wire connector  
When replacing the power transformer, in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, in order to prevent safety hazards, perform carefully and precisely the following steps.  
Replacement procedure
  - 1) Remove the old connector by cutting the wires at a point close to the connector.  
Important: Do not re-use a connector (discard it).
  - 2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.
  - 3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.
  - 4) Use the crimping tool to crimp the metal sleeve at the center position.  
Be sure to crimp fully to the complete closure of the tool.
12. When connecting or disconnecting the VCR connectors at first disconnect the AC plug from AC supply socket.

### ● Safety Check after Servicing

1. **Insulation resistance test**  
Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, video and audio output terminals, etc.).
2. **Dielectric strength test**  
Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio output terminals, etc.).
3. **Clearance distance**  
When replacing primary circuit components, confirm specified clearance distance.
4. **Leakage current test**

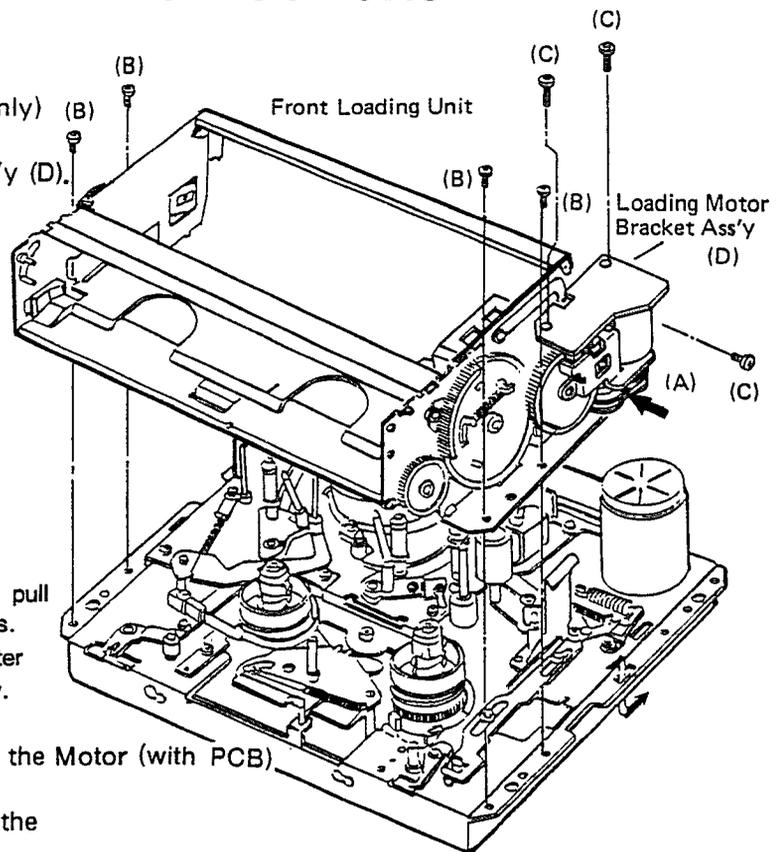

# (VCR SECTION)

## DISASSEMBLY INSTRUCTIONS

### [1] FRONT LOADING UNIT

1. Remove 4 screws (B).
2. Take off the hook (A). (Right side only)
3. Remove 3 screws (C).
4. Take off Loading Motor Bracket Ass'y (D).

### [2] PHOTO SENSOR

1. Replacement of Lamp Holder Ass'y.  
(Sensor Lamp)

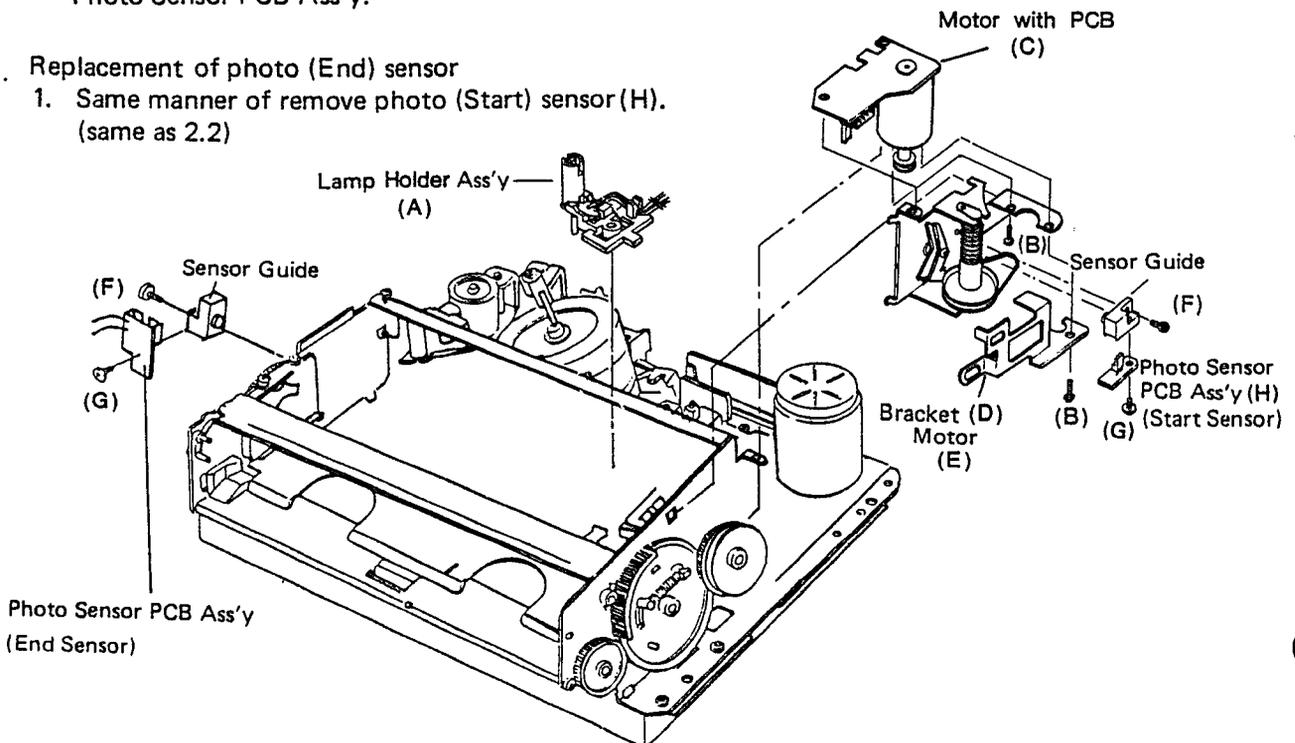

1. Hold lamp holder ass'y body(A) and pull up to remove the hook from chassis.
2. Turn the lamp holder ass'y to counter clockwise and take out holder ass'y.

2. Replacement of photo (Start) sensor

1. Remove 2 screws (B) and take off the Motor (with PCB) (C) and Bracket (D), Motor (E).
2. Remove 1 screw (F) and take off the Sensor Guide.  
Remove 1 screw (G) and take off the Photo Sensor PCB Ass'y.

3. Replacement of photo (End) sensor

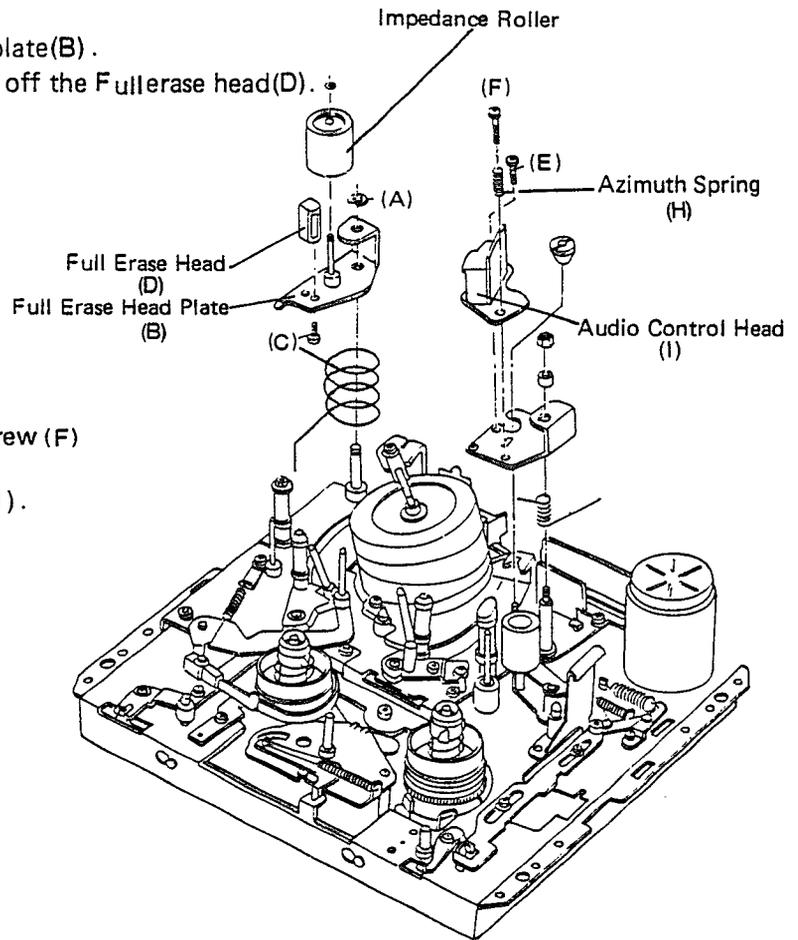

1. Same manner of remove photo (Start) sensor (H).  
(same as 2.2)

### [3] FULL ERASE HEAD/AUDIO CONTROL HEAD

#### Erase Head

1. Remove E-ring (A).
2. Pull out the Full Erase head plate (B).
3. Remove 1 screw (C) and take off the Full Erase head (D).

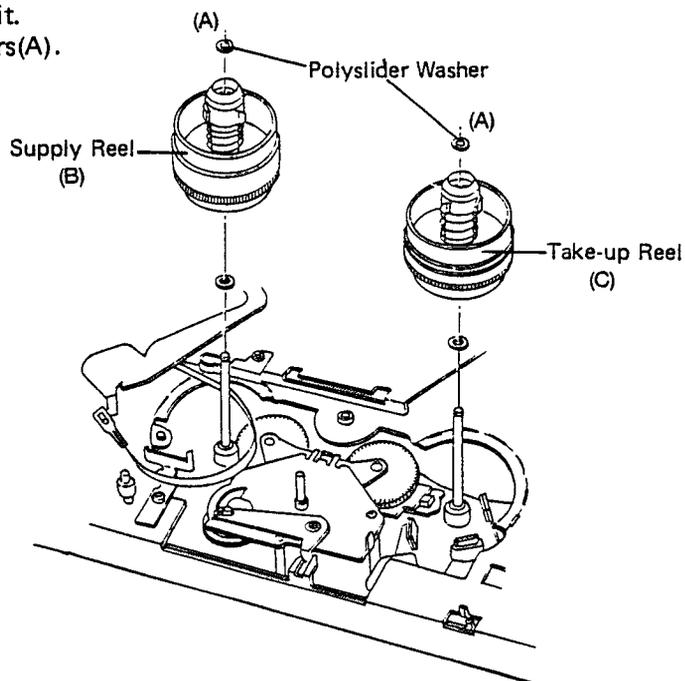

#### Audio Control Head

1. Remove 1 screw (E) and 1 screw (F) and azimuth spring (H).
2. Remove audio control head (I).

### [4] REEL (SUPPLY & TAKE-UP)

#### (a) Remove front loading unit.

1. Remove polyslider washers (A).
2. Remove the reels (B), (C).

[5] GEAR HOLDER ASS'Y/CLUTCH

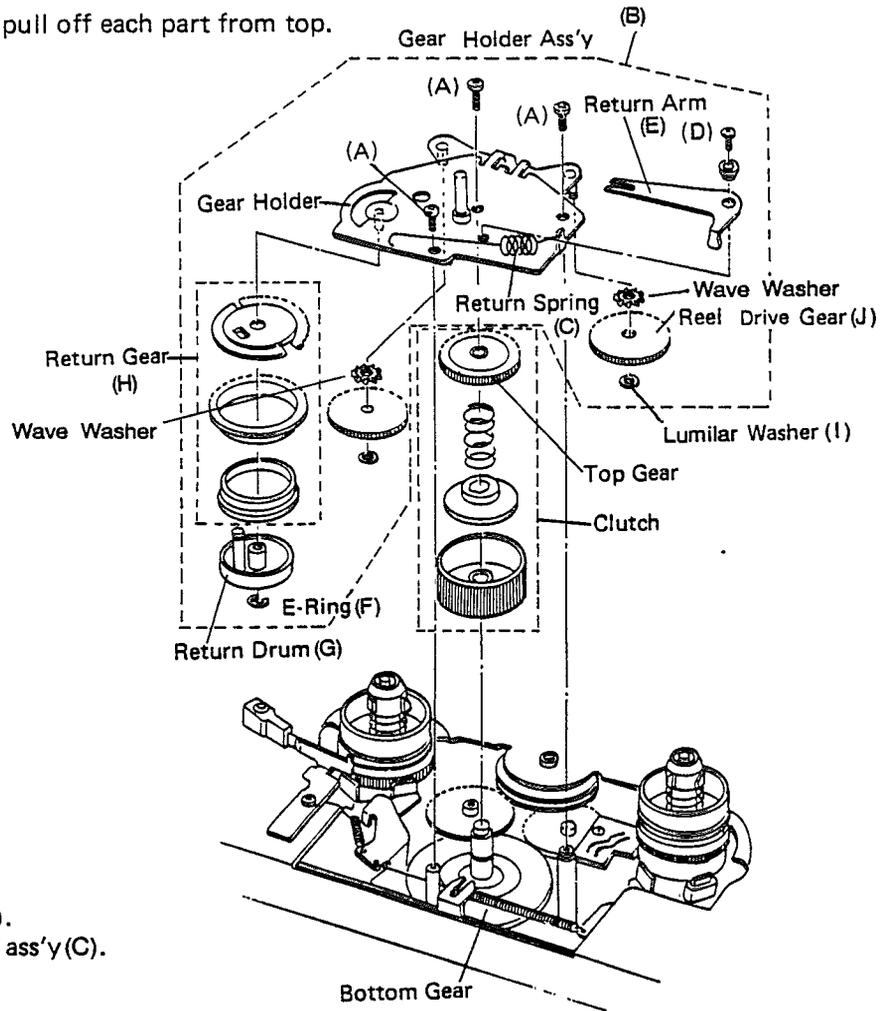

Gear Holder Ass'y

(a) Remove front loading unit.

1. Remove 3 screws (A), and gear holder ass'y(B).
2. Remove return spring(C).
3. Remove 1 screw (D) and return arm(E).
4. Remove E-Ring (F) and return drum(G)and return gear (H).
5. Remove polyslider washer (I) and then take off the reel drive gear (J) .

Clutch

Top gear is pressed to insert so pull off each part from top.

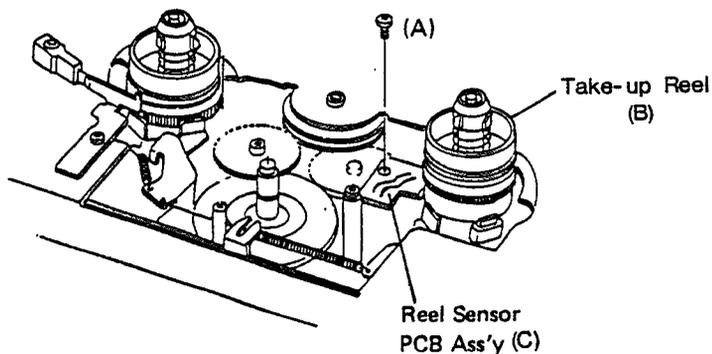

[6] REEL SENSOR

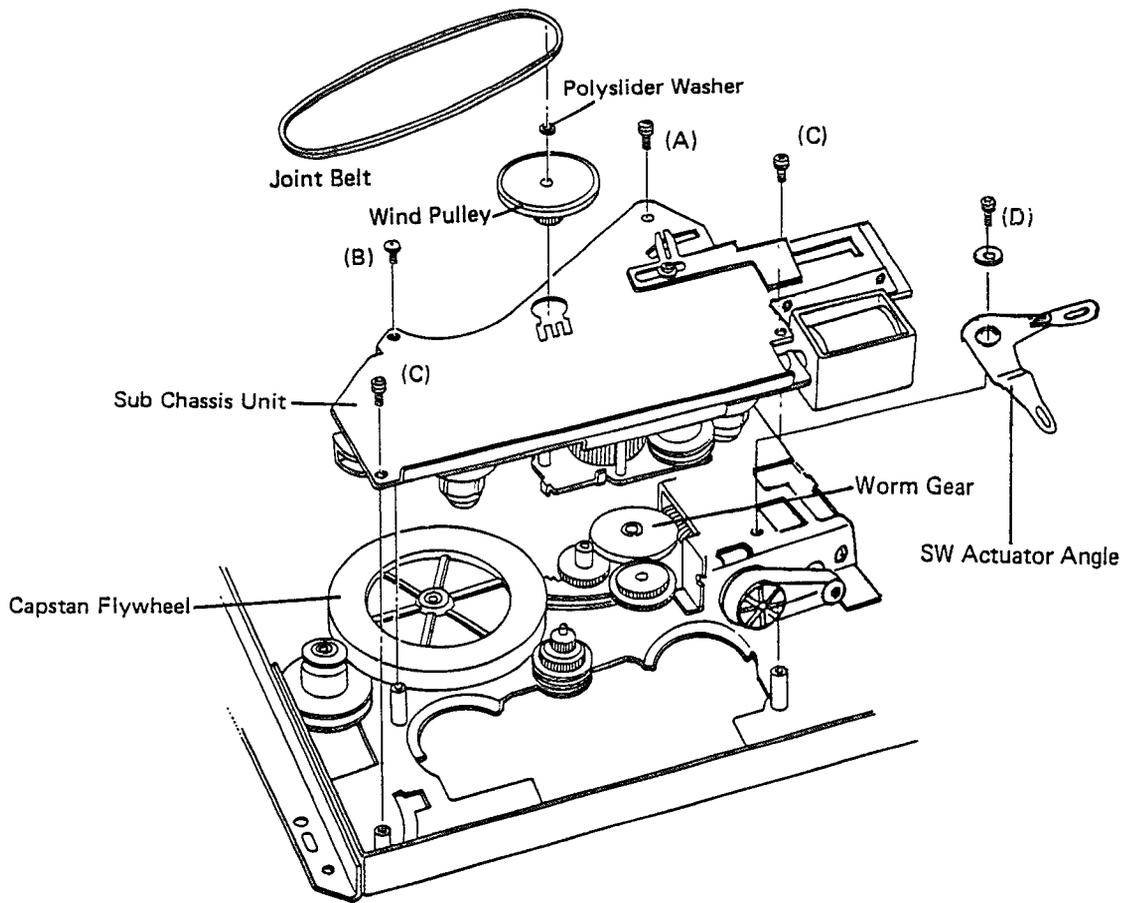

(a) Remove front loading unit.

(b) Remove gear holder ass'y.

1. Remove 1 screw (A).
2. Remove take-up reel(B).
3. Remove reel sensor PCB ass'y(C).

[7] SUB CHASSIS

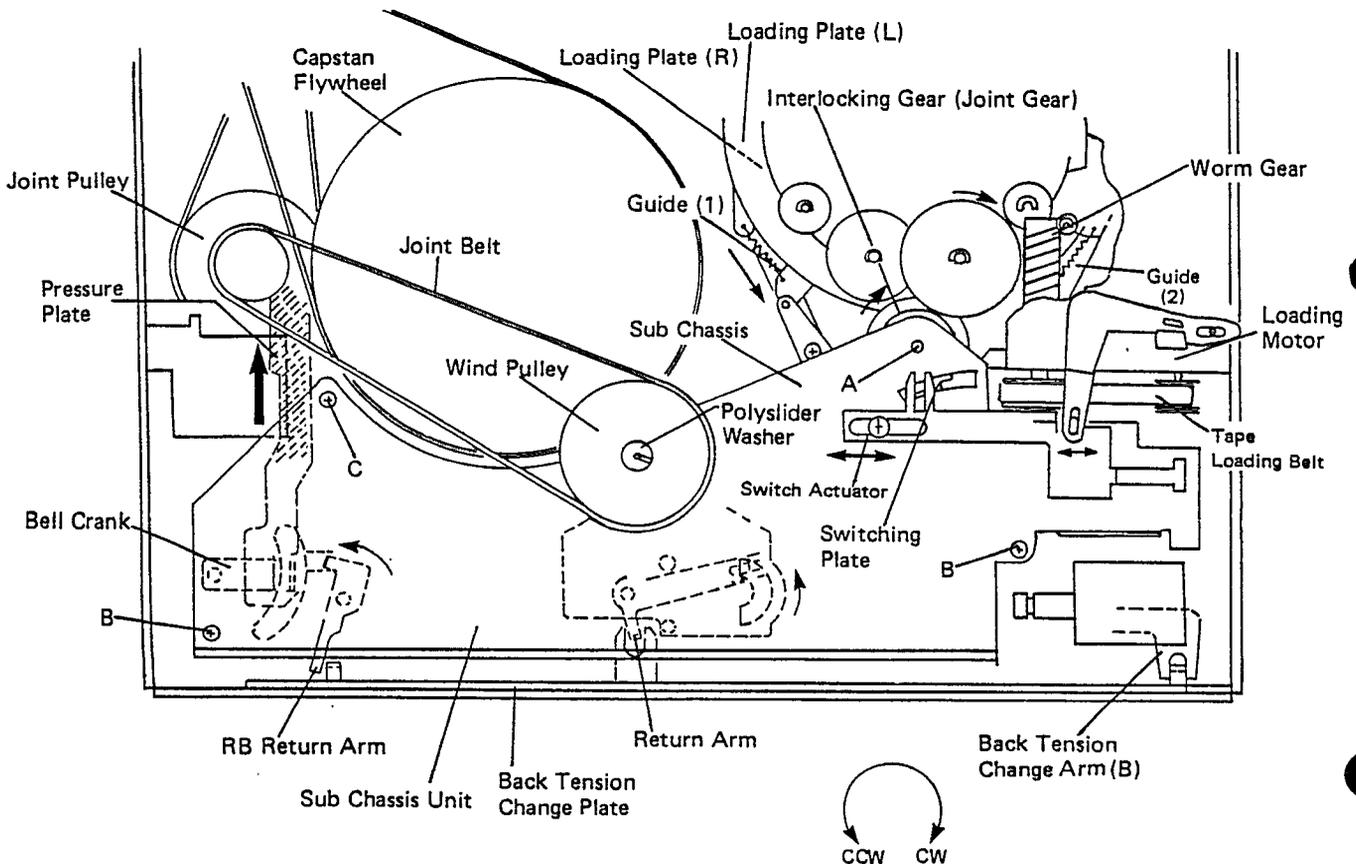

Take out of Sub Chassis Unit

1. Turn the Capstan Flywheel clockwise more than three times. (Because the levers, etc. are set at neutral.)
2. Remove the Joint Belt.
3. Remove the Polyslider Washer.
4. Pull out the Wind Pulley.
5. Remove 1 screw (D) and take off the SW Actuator Angle.
6. Remove 4 mount screws from sub chassis. (Ax1, Bx1 Cx2)
7. Take out the Sub Chassis Unit.

## Mounting of Sub Chassis Unit

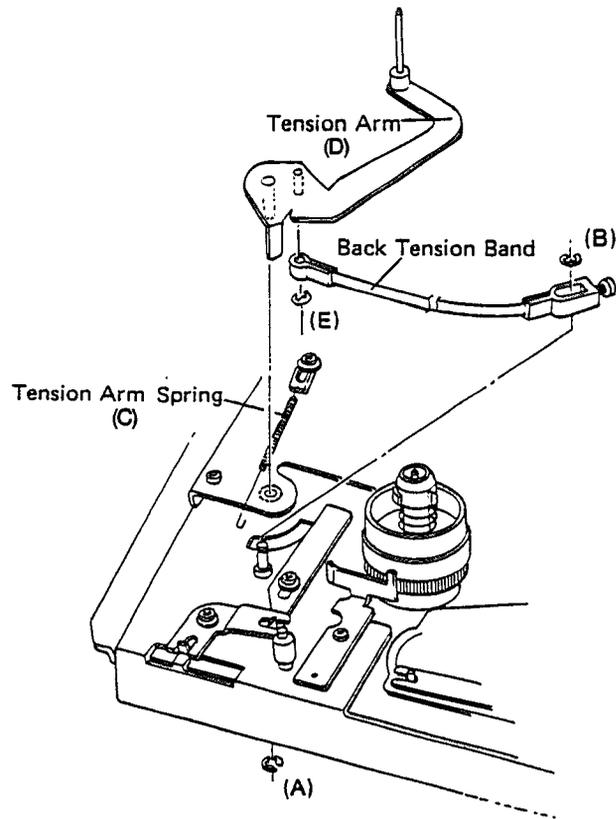

1. Turn the Return Arm in the direction of arrow mark.
2. Move the Back Tension Change Plate to the right direction extremely.
3. Turn the RB return arm to the direction of arrow mark extremely.
4. Turn the Loading Plates (L) and (R), and stop them at the position of hitting the wall of groove or just stop.  
This work is done by turning the pulley of the Worm Gear jointed to the Loading Motor.
5. Turn the Interlocking Gear in the direction of arrow mark (counterclockwise) extremely.
6. Mount the Sub Chassis Unit. At this time, make the band brake of back tension fit to the supply reel. (Top side)
7. Shake the Switch Actuator to right and left in order to confirm the engagement of interlocking gear.
8. Slide the Pressure Plate in the direction of arrow mark in order to connect the Pressure Plate with the Bell Crank.
9. Mount the Sub Chassis Unit with 4 small screws.  
(A x 1, B x 2, C x 1)
10. Insert the Wind Pulley.
11. Set the Polyslider Washer.
12. Mount the Joint Belt.
13. Confirm that the Return Arm is set to the calw of the Back Tension Change Plate.  
It is OK that following two operations are confirmed by turning the capstan flywheel.  
(1) When the Capstan Flywheel is turned counterclockwise (CCW), the Back Tension Change Arm moves to the left.  
(2) When the Capstan Flywheel is turned clockwise (CW), the Back Tension Change Arm moves to the right.

[8] TENSION ARM ASS'Y

Remove front loading unit.

1. Remove E-ring (A).
2. Remove E-ring (B).
3. Remove tension arm spring (C).
4. Remove tension arm (D).
5. Remove E-ring (E).

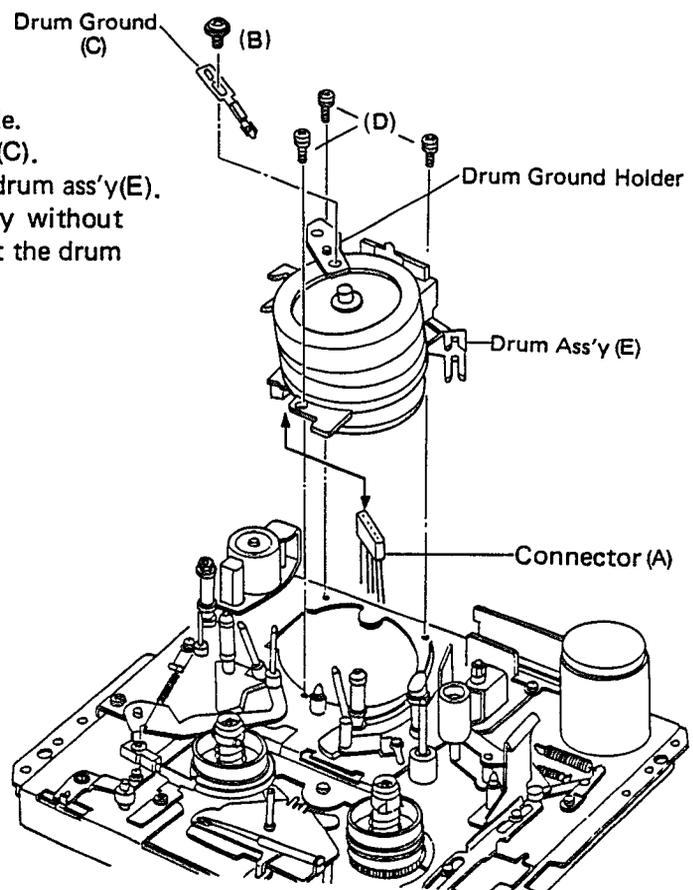

[9] DRUM ASS'Y

(a) Remove front loading unit.

1. Remove connector (A) from bottom side.
2. Remove a screw (B), and drum ground (C).
3. Remove 3 screws (D) and take off the drum ass'y (E).

Remark: Remove the drum ass'y carefully without any damage. Especially do not hit the drum ground holder.

[10] UPPER DRUM

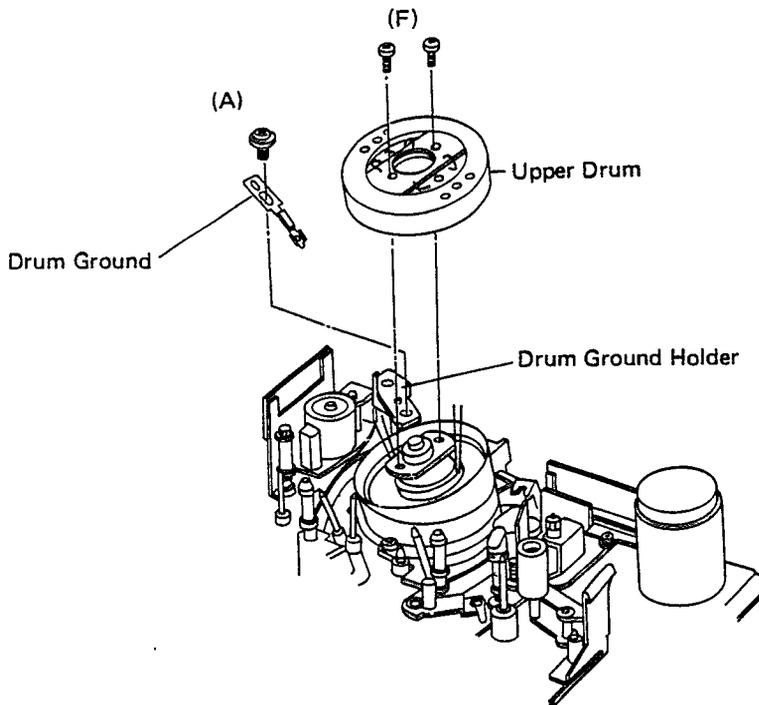

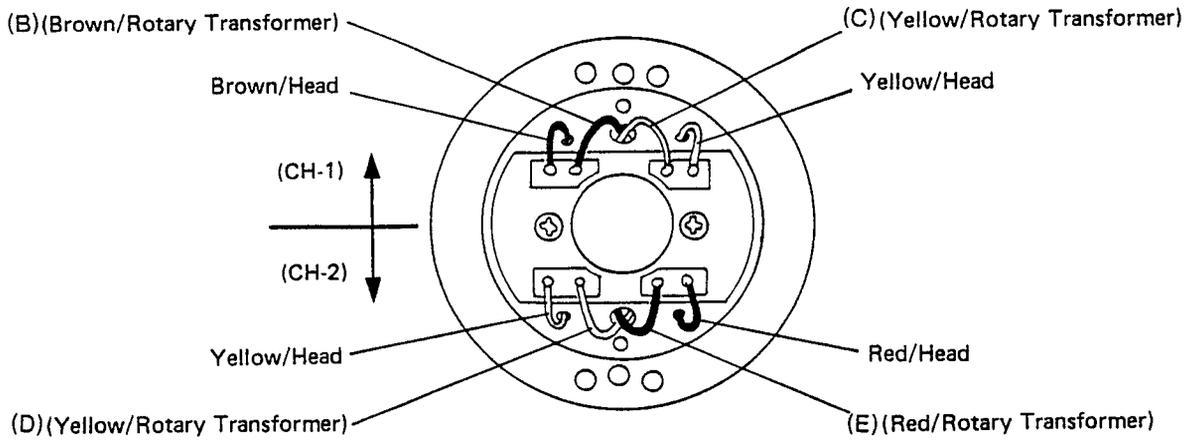

Remove front loading unit.

1. Remove 1 screw (A), and drum ground.
  2. Resolder rotary transformer wires (B),(C),(D) and(E).
- Do not unsolder head wires.

3. Remove 2 screws (F).

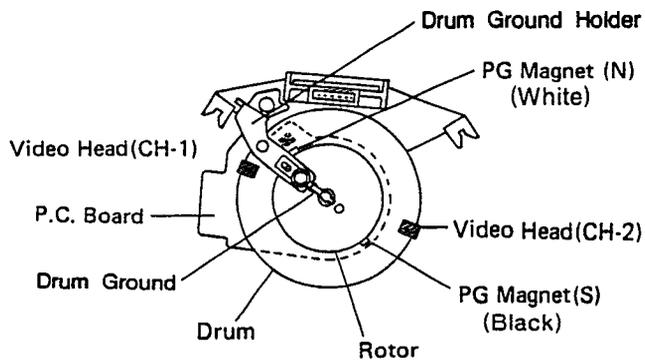

Remarks: 1) Use gloves and do not touch with bare finger or dust to drum face.

- 2) If the video head is defective, replace the complete upper drum with head.

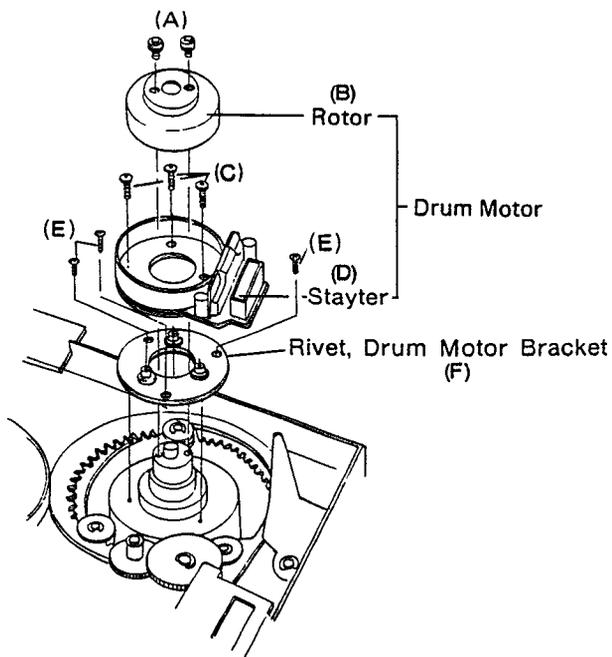

[11] DRUM MOTOR

1. Remove 2 screws (A).
2. Remove the rotor (B).
3. Remove 3 screws (C).
4. Remove stayter(D).
5. Remove 3 screws (E).
6. Remove Rivet, Drum Motor Bracket(F).

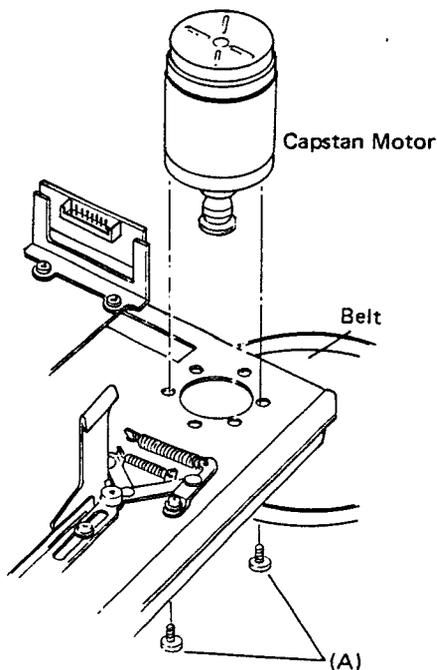

DRUM Ass'y (Top View)

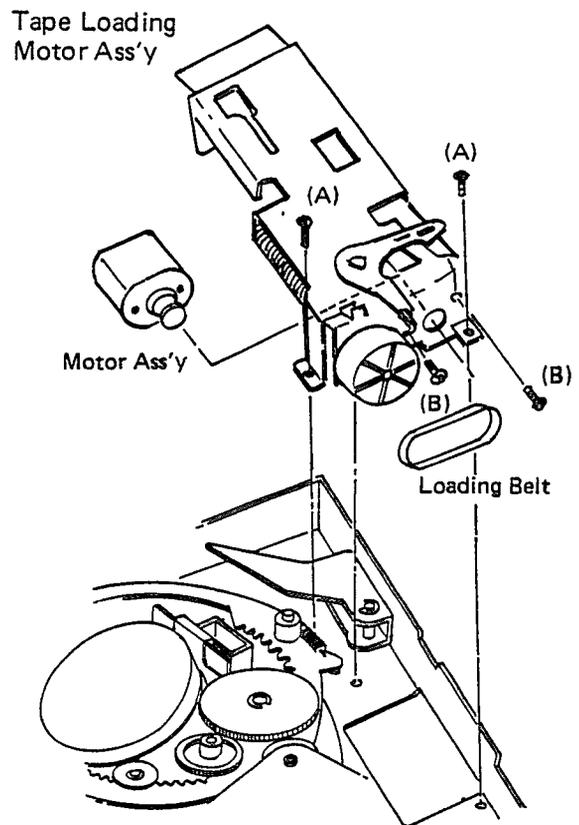

[12] CAPSTAN MOTOR

1. Take off the belt from capstan motor.
2. Remove 2 screws (A).

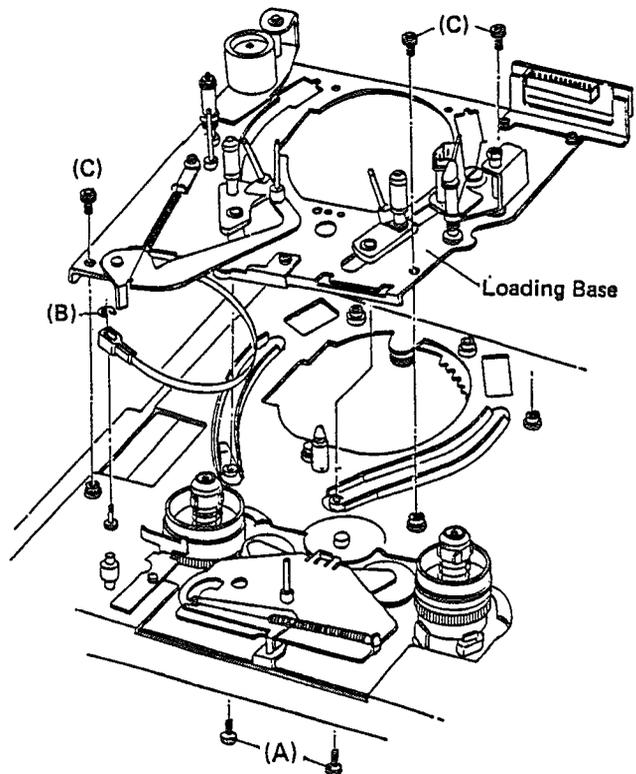

[13] TAPE LOADING MOTOR

1. Remove 2 screws (A).
2. Take off Tape Loading Motor Ass'y .
3. Take off Loading Belt.
4. Remove 2 screws (B) and take off Motor Ass'y.

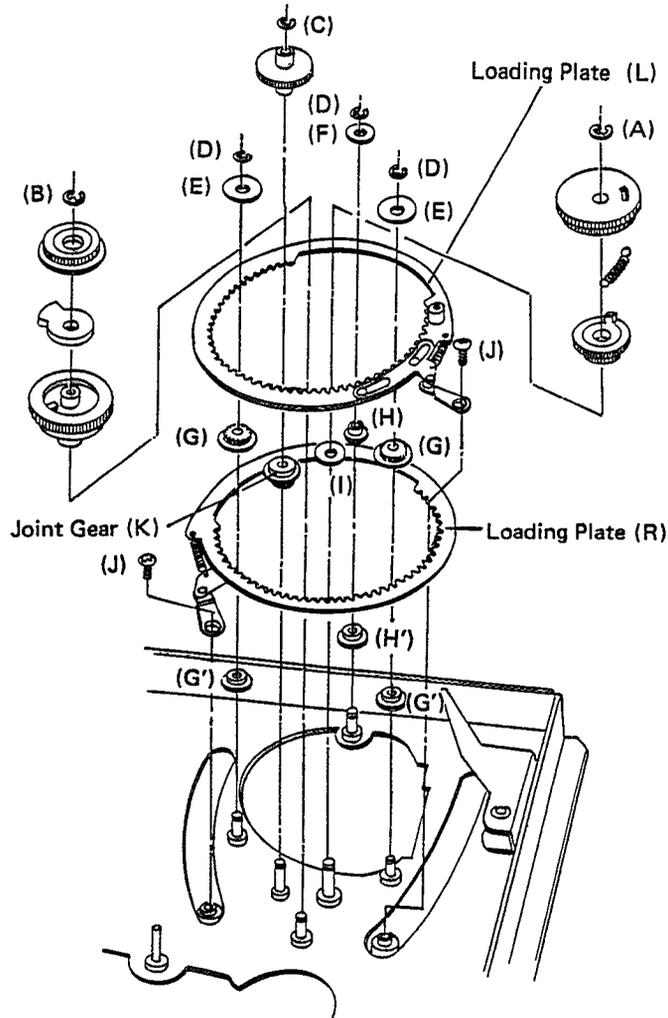

[14] LOADING BASE

1. Remove Motor Ass'y and Drum Ass'y.
2. Remove 2 screws (A) from bottom.
3. Remove E-ring (B).
4. Remove 3 screws (C).
5. Take off the Loading Base.

[15] LOADING GEAR

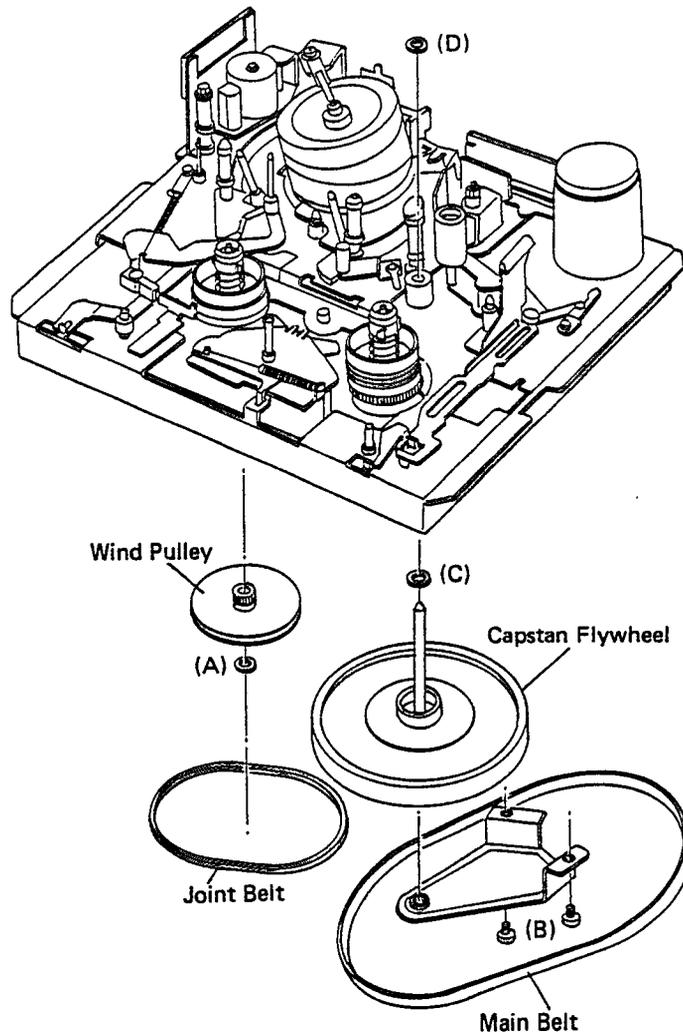

1. Remove Sub-Chassis Unit Flywheel and Front Loading Motor Ass'y.
2. Remove E-ring (A) and take off Gear Ass'y.
3. Remove E-ring (B) and take off Gear Ass'y.
4. Remove E-ring (C) and take off Gear Ass'y.
5. Remove 3 E-rings (D), 2 Plate Washers (E) and 1 Plate Washer (F).
6. Remove 2 screws (J).
7. Take off the Loading Plate (L).
8. Take off the Joint Gear (K), 2 Guide Gears (G), Guide Roller (H) and Plate Washer (I).
9. Take off the Loading Plate (R).
10. Take off 2 Guide Gears (G') and Guide Roller (H').

[16] CAPSTAN FLYWHEEL

1. Remove Front Loading Unit.
2. Take off the Joint Belt and Main Belt.
3. Take off the Polyslide Washer (A) and Wind Pulley.
4. Remove 2 screws (B).

Remark: Do not miss the washer (C) and (D) when pull out the capstan flywheel.

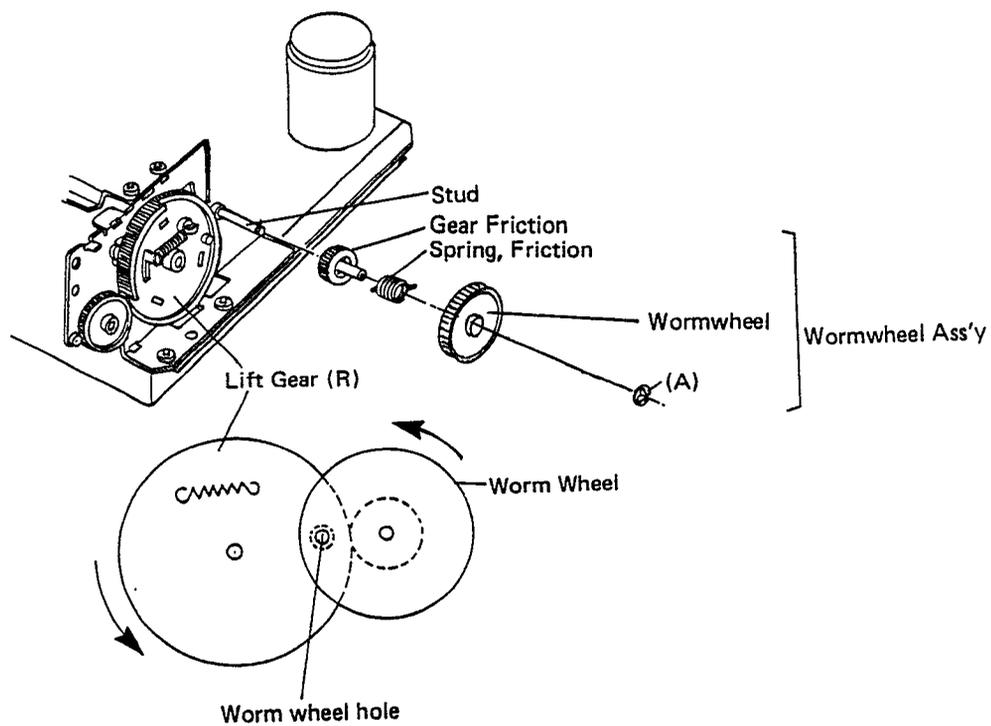

## [18] FRONT LOADING WORMWHEEL UNIT

- DISASSEMBLY

1. Remove E-ring (A).
2. Remove Wormwheel Ass'y. (Wormwheel, Spring Friction, Gear Friction.)

- ASSEMBLY

1. Turn Lift Gear (R) fully counterclockwise.
2. Restore Wormwheel Ass'y to Stud.  
Match Lift Gear (R) to Wormwheel Hole as illustrated.

## MECHANICAL ADJUSTMENT JIG AND TOOLS

Item	Part No.	Adjustment
Torque Meter Driver (Special)	VHT-063	Back Tension Control Head Tape Guide Height Guide Roller Setting
Wrench M2 Hexagon		
Wrench M3 Hexagon		A/C Head Tilt
Mirror		Tape Transportation Check
Box Driver M3		Guide Pole A/C Head Height
Alignment Tape	F6-N	FM Output Level/Azimuth Adjustment
Alignment Tape	F6-A	Audio Output Adjustment

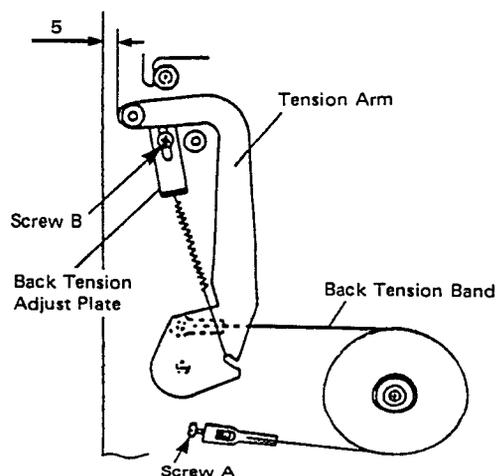

### 1) Tension Arm Position

1. Push Play button and start without video cassette tape.
2. Turn screw A and match a tip of tension arm to marking on the loading base.

### 2) Back Tension

1. Load cassette torque gauge (VHT-063) and push PLAY button.
2. Loosen screw B and slide back tension plate, until gauge indicates  $24 \pm 5$  g-cm.
3. Confirm proper operations of Interlocking Gear and switching plate and Mounting position of Loading switch.

**Note:** Removal of the front loading ass'y is not necessary at both disassembly and assembly.

# DECK ADJUSTMENT

1. Audio/control head height and azimuth adjustment.
  1. Connect CH1 of oscilloscope to AUDIO OUT. (Fig.1)

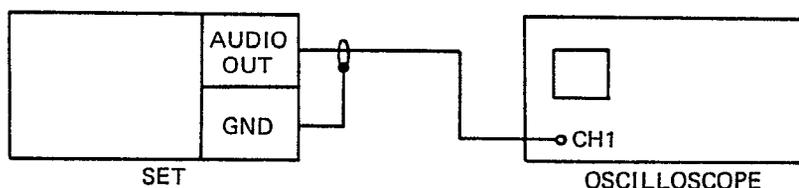

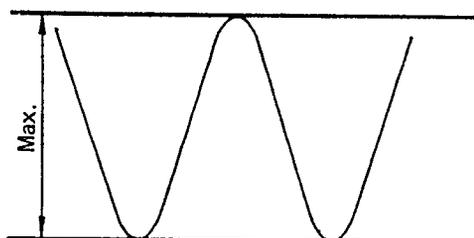

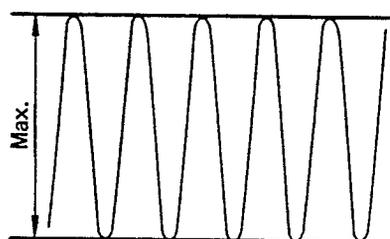

Fig. 1

2. Playback test tape F6-A 1kHz Audio Signal.
3. Adjust nut (A) to obtain maximum audio output level (Fig. 4)
4. First, decline the head toward the nut (A) by turning screw (C). Then turn the screw (C) reversely and slowly to obtain the maximum audio output level (Fig. 4).
5. Check that smooth tape transportation at the take-up guide pole. Especially inspect no tape slack and wrinkling. If these problem occur re-adjust (A) and (C). (Fig. 4)  
Playback test tape F6-N (6 kHz Audio Signal)
6. Adjust screw (B) to obtain maximum audio output level. (Fig. 4)

1 kHz

Fig. 2

6 kHz

Fig. 3

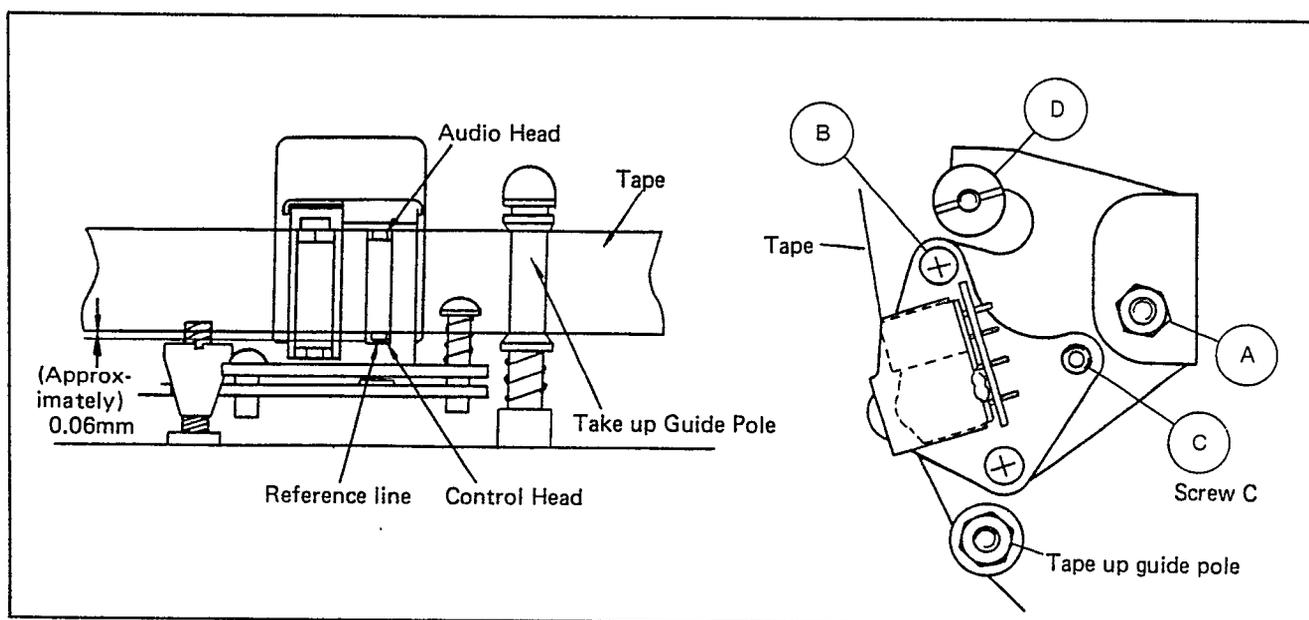

Fig. 4 A/C Head Adjustment

2. FM peak adjustment (Fig. 5)

1. Connect CH1 of oscilloscope to TP5.
2. Connect CH2 of oscilloscope across TP13 and Ground.
3. Set oscilloscope to TRIGGER mode.

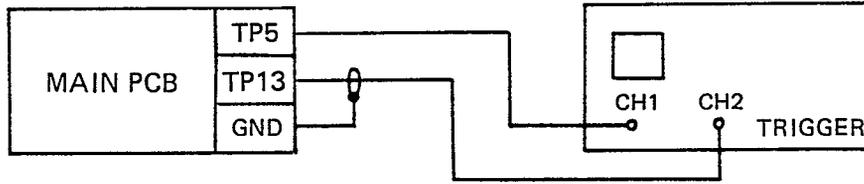

Fig. 5

4. Playback test tape F8-N (stair step without color signal).
5. Adjust screw (D) to obtain maximum FM output level. (Fig. 4,6).

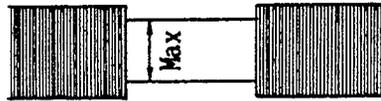

Fig. 6

3. FM waveform adjustment (Fig. 5)

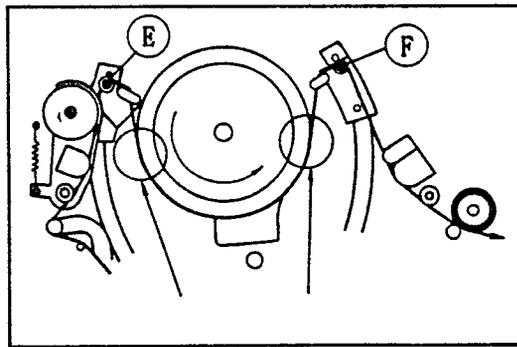

Fig. 7

1. Connect CH1 of oscilloscope to TP5.
2. Connect CH2 of oscilloscope across TP13 and GND.
3. Set oscilloscope to TRIGGER mode.

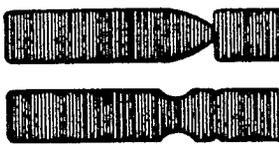

Fig. 8

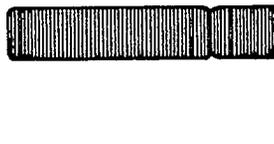

Fig. 9

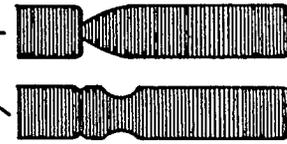

Fig. 10

4. Playback test tape F6-N (stair step without color signal).
5. If the FM waveform observed by oscilloscope is as same as shown in Fig. 8, adjust screw (F) until waveform becomes as shown in Fig. 9.
6. If the FM waveform observed by oscilloscope is as same as shown in Fig. 10, adjust screw (E) until wave form becomes as shown in Fig. 9.

NOTE: 1. Confirm that Electrical Adjustment (Video Head Switching Point and CTL Preset) has been done before Deck Adjustment.  
 2. Deck Adjustment should be done with Tracking Volume at the center position.

## SERVICE SCHEDULE OF COMPONENT

○: Check    ●: Replace

Deck		Periodic Service Schedule			
Ref. No.	Parts Name	1000 hr	2000 hr	3000 hr	4000 hr
2	Drum, upper with video head	○	●	○	●
224	Pinch Roller (A)		●		●
301	Ass'y, Clutch		●		●
392	Motor Ass'y, Capstan		●		
651	Motor with Pulley			●	
702	Motor Ass'y, Loading			●	
373	Belt, Main		●		●
393	Belt, Drive		●		●
394	Belt, Joint		●		●
659	Belt, TL		●		●
338	Shoe, Brake		●		●
193	Flat Ass'y, Back Tension		●		●
16	Ground, Drum			●	
142	Head, Audio/Control			●	
178	Head, Full Erase			●	
281	Reel Ass'y, Supply			●	
282	Reel Ass'y, Take-up (B)			●	
311	Clutch Ass'y, RF (B)		●		●

— How to service the defective units. —

1. Clean, all parts for the tape transportation.

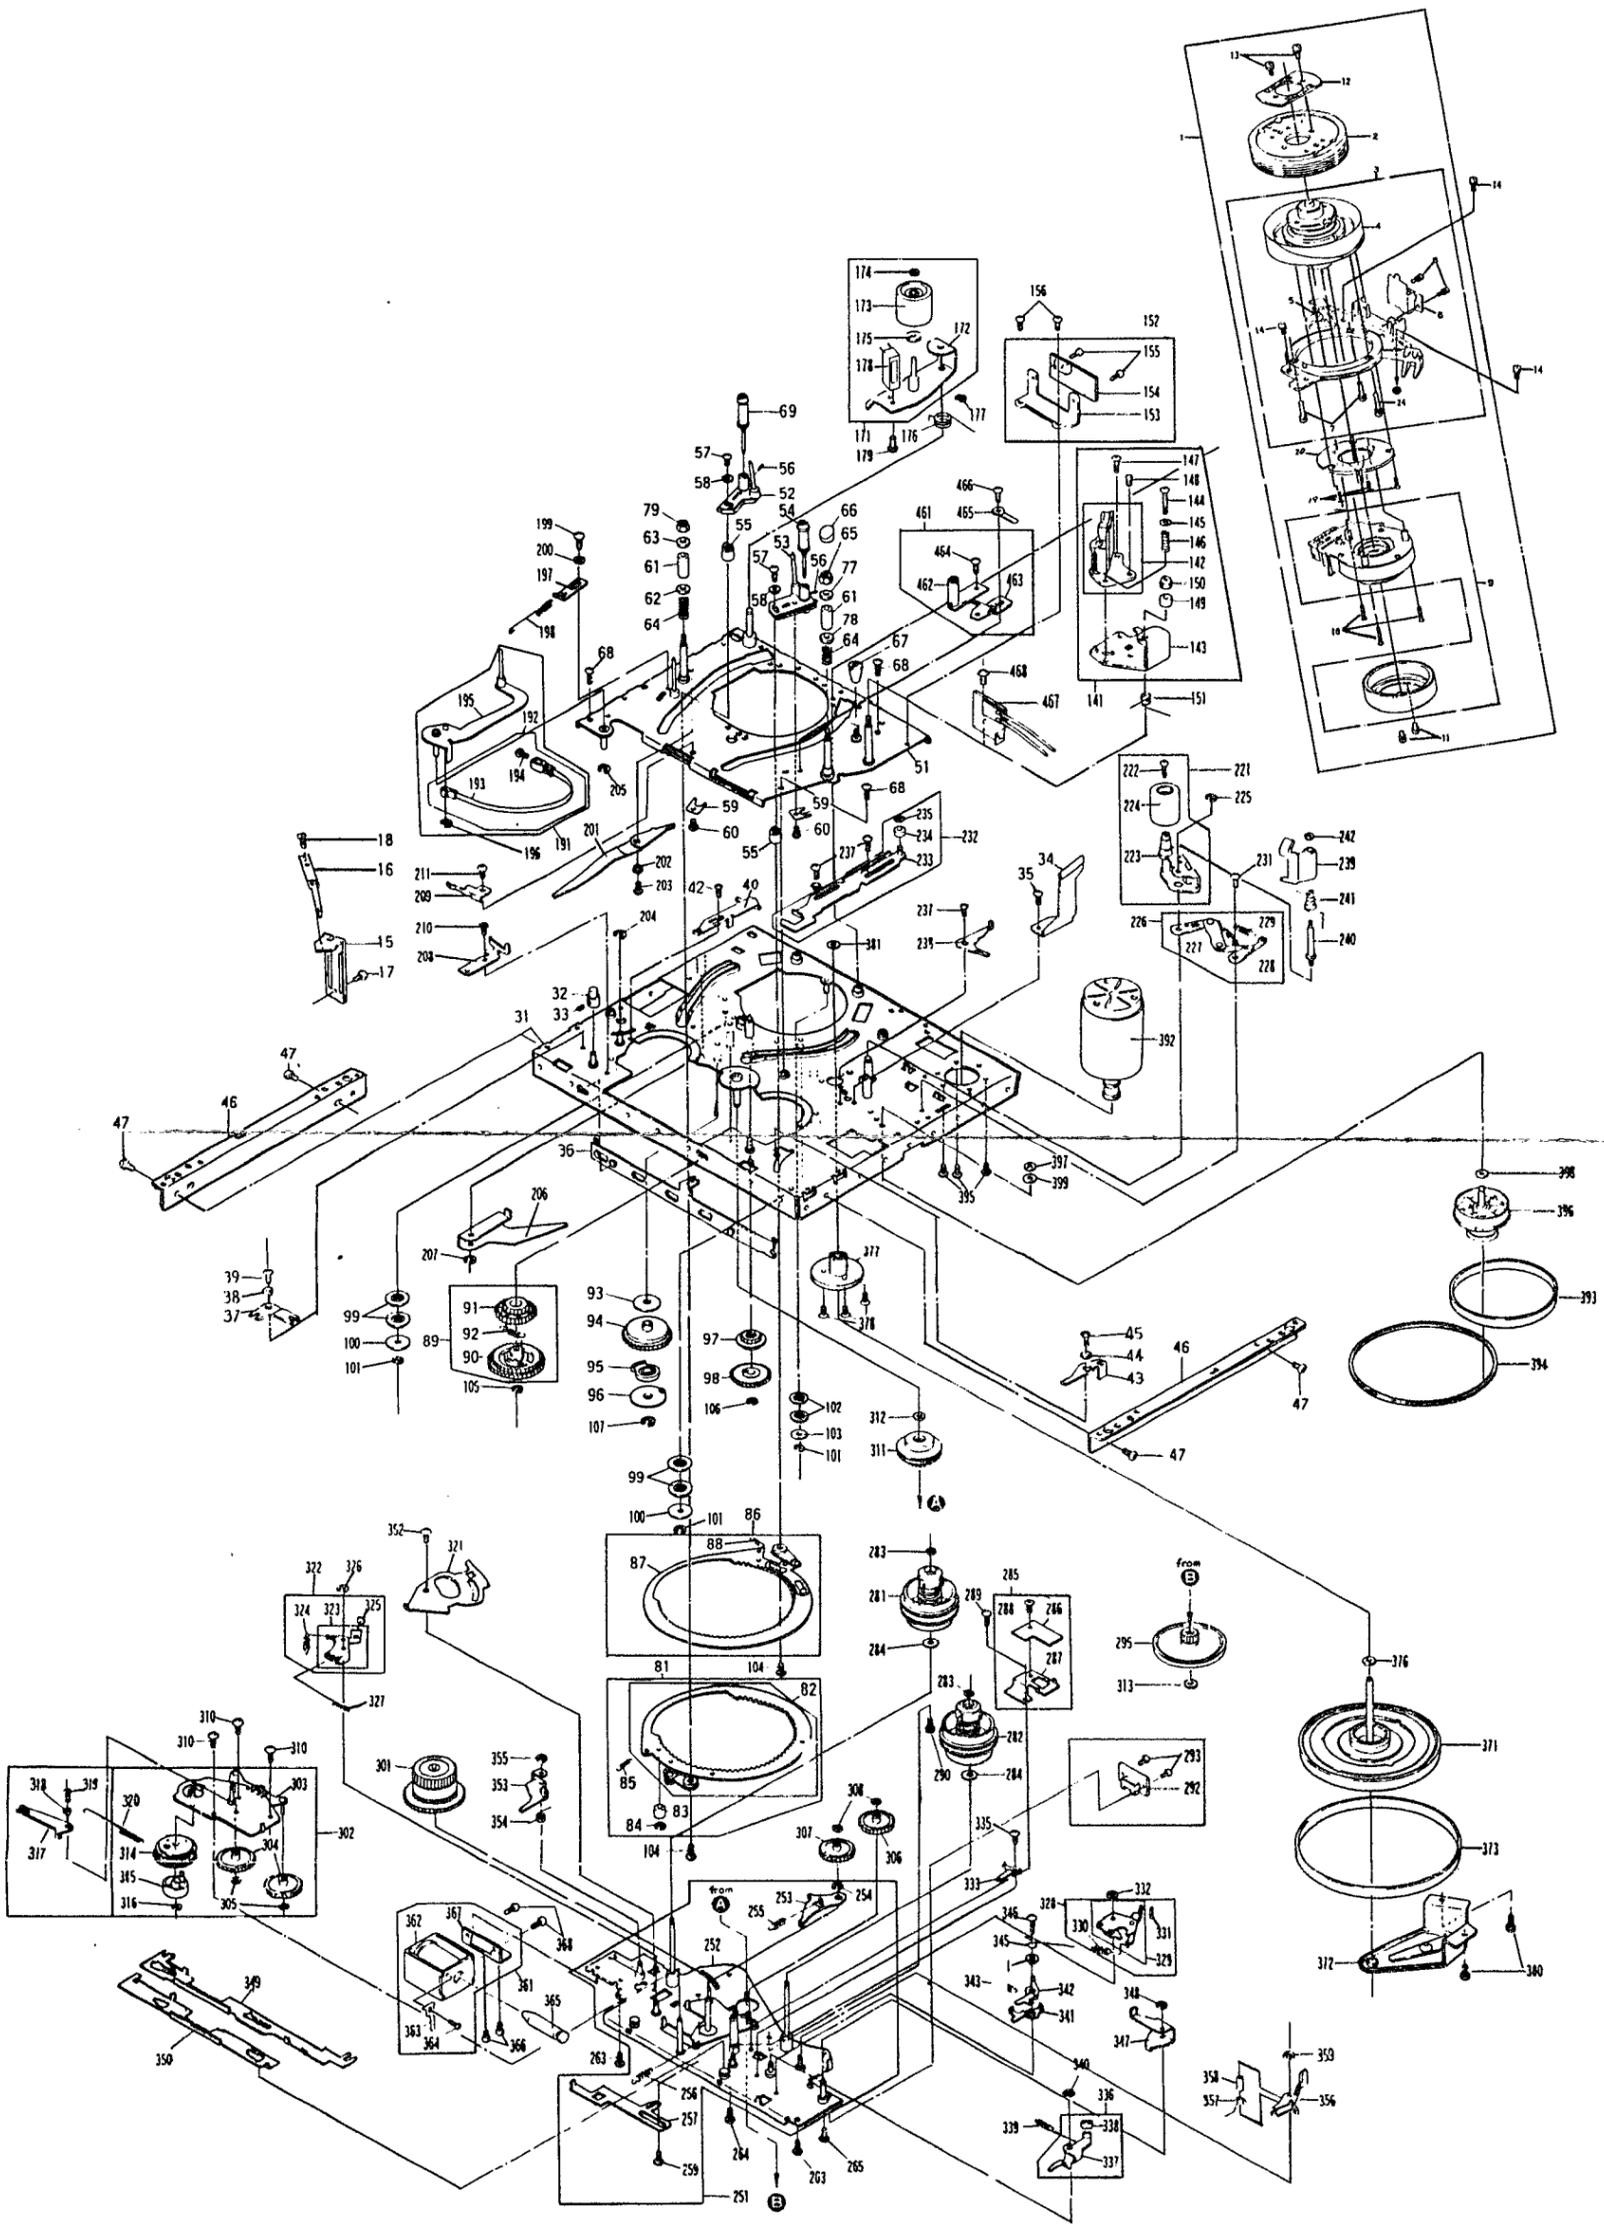

Drum, upper with video head/Pinch Roller

Audio/Control head/Full erase head

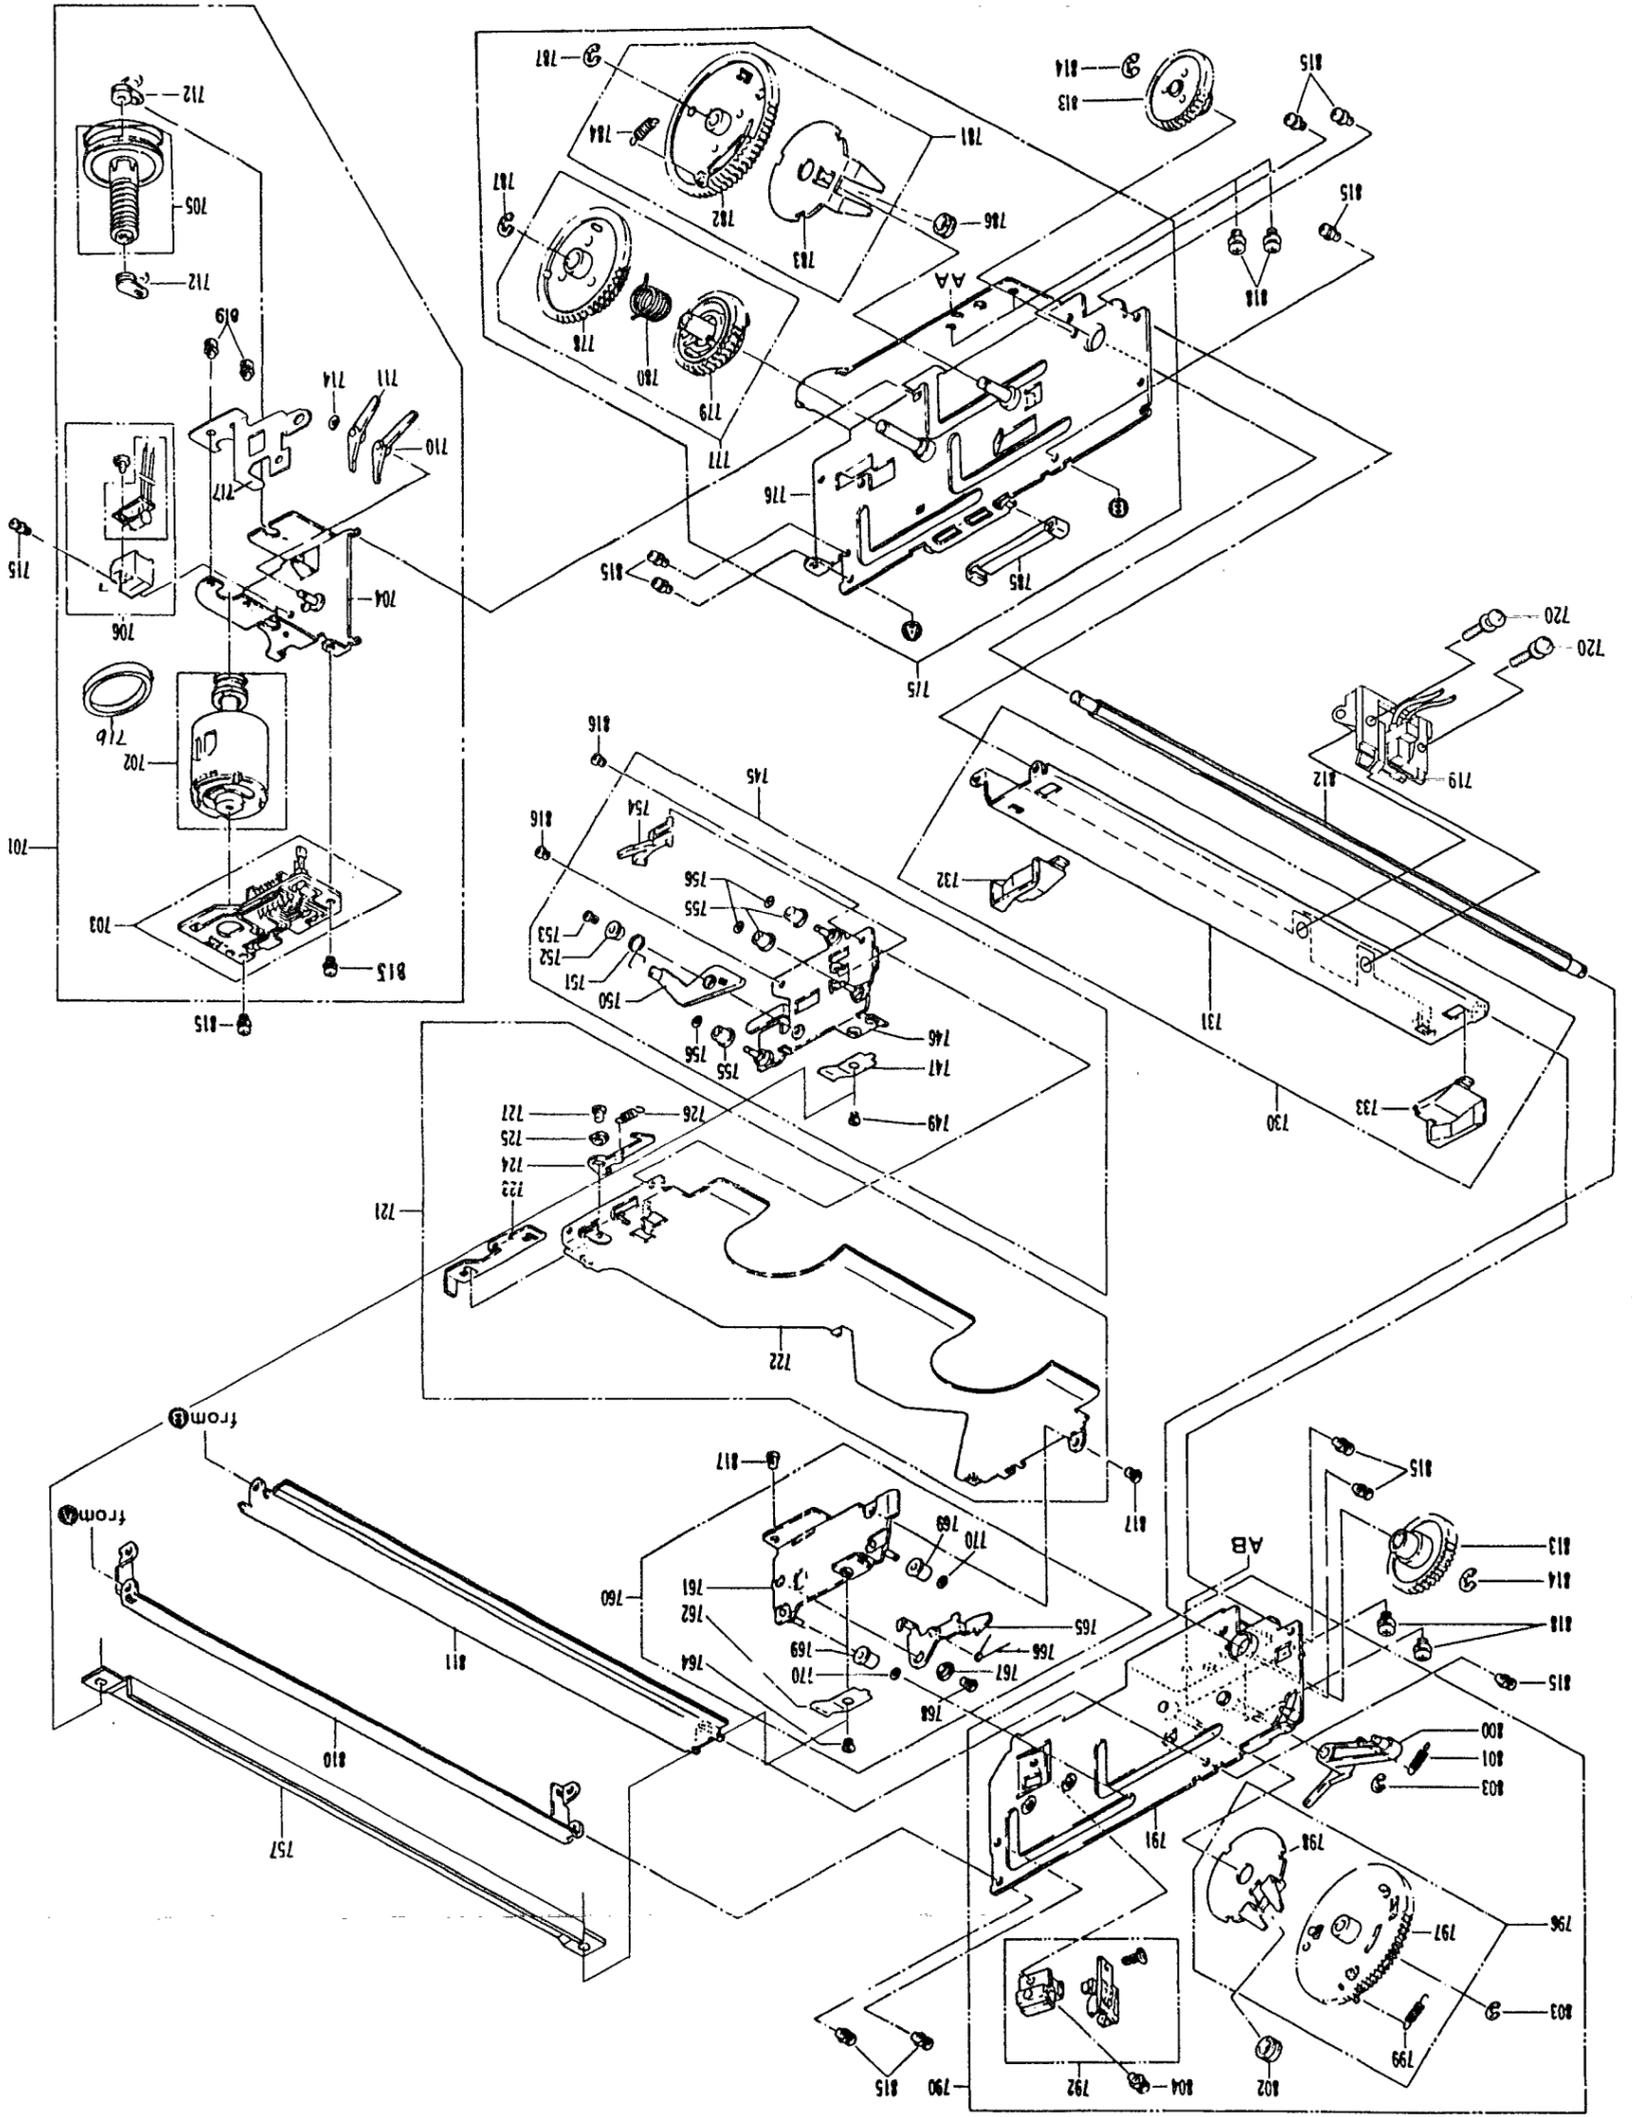

2. After clean up the parts must be confirmed all DECK ADJUSTMENT.

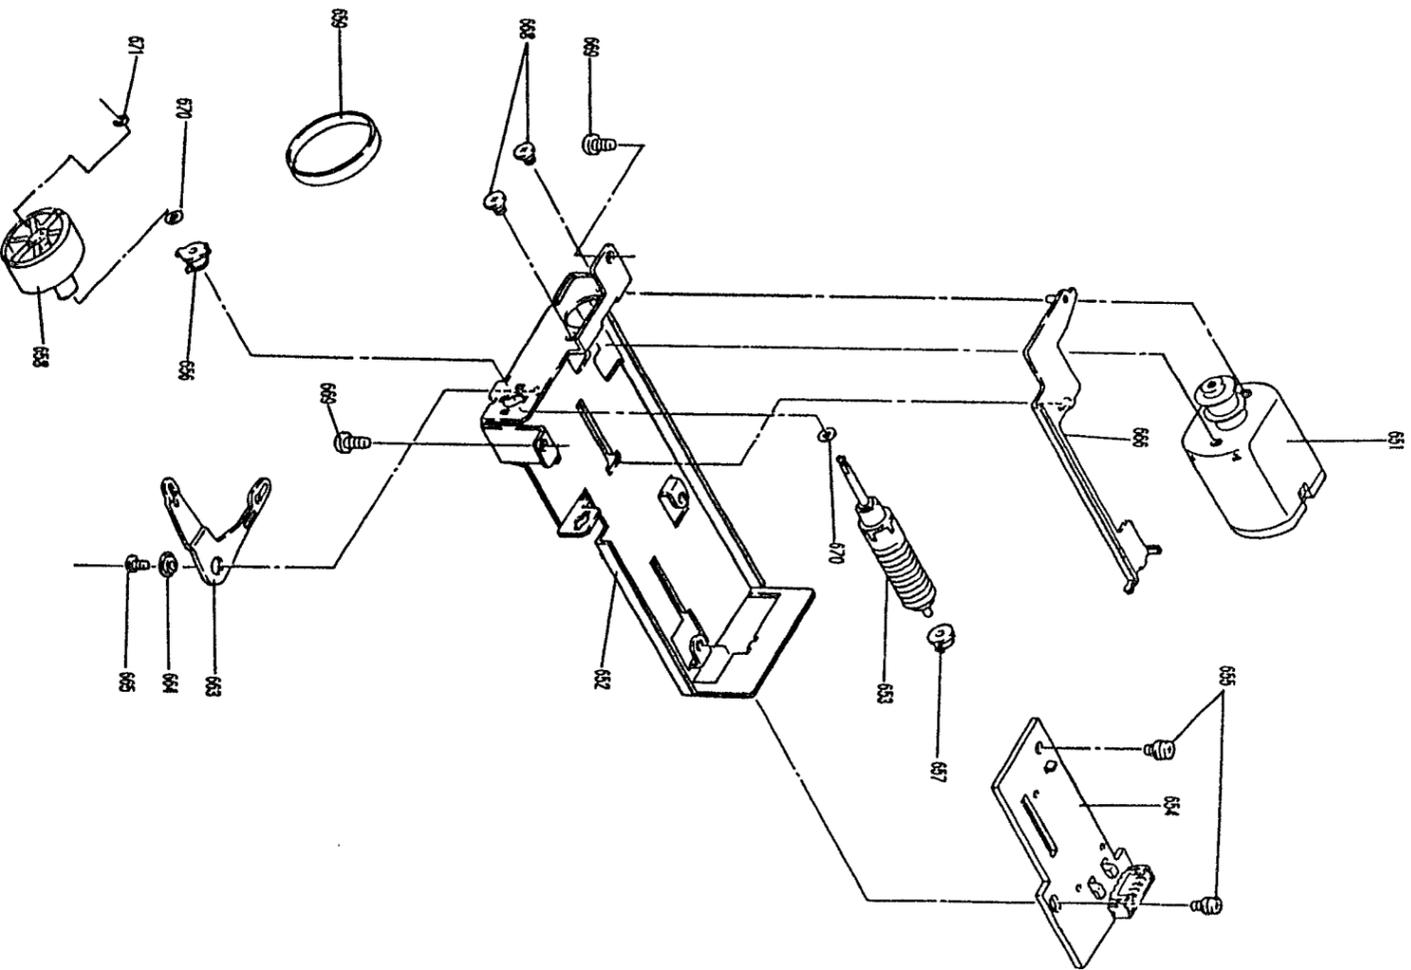

EXPLODED VIEW (DECK 1)

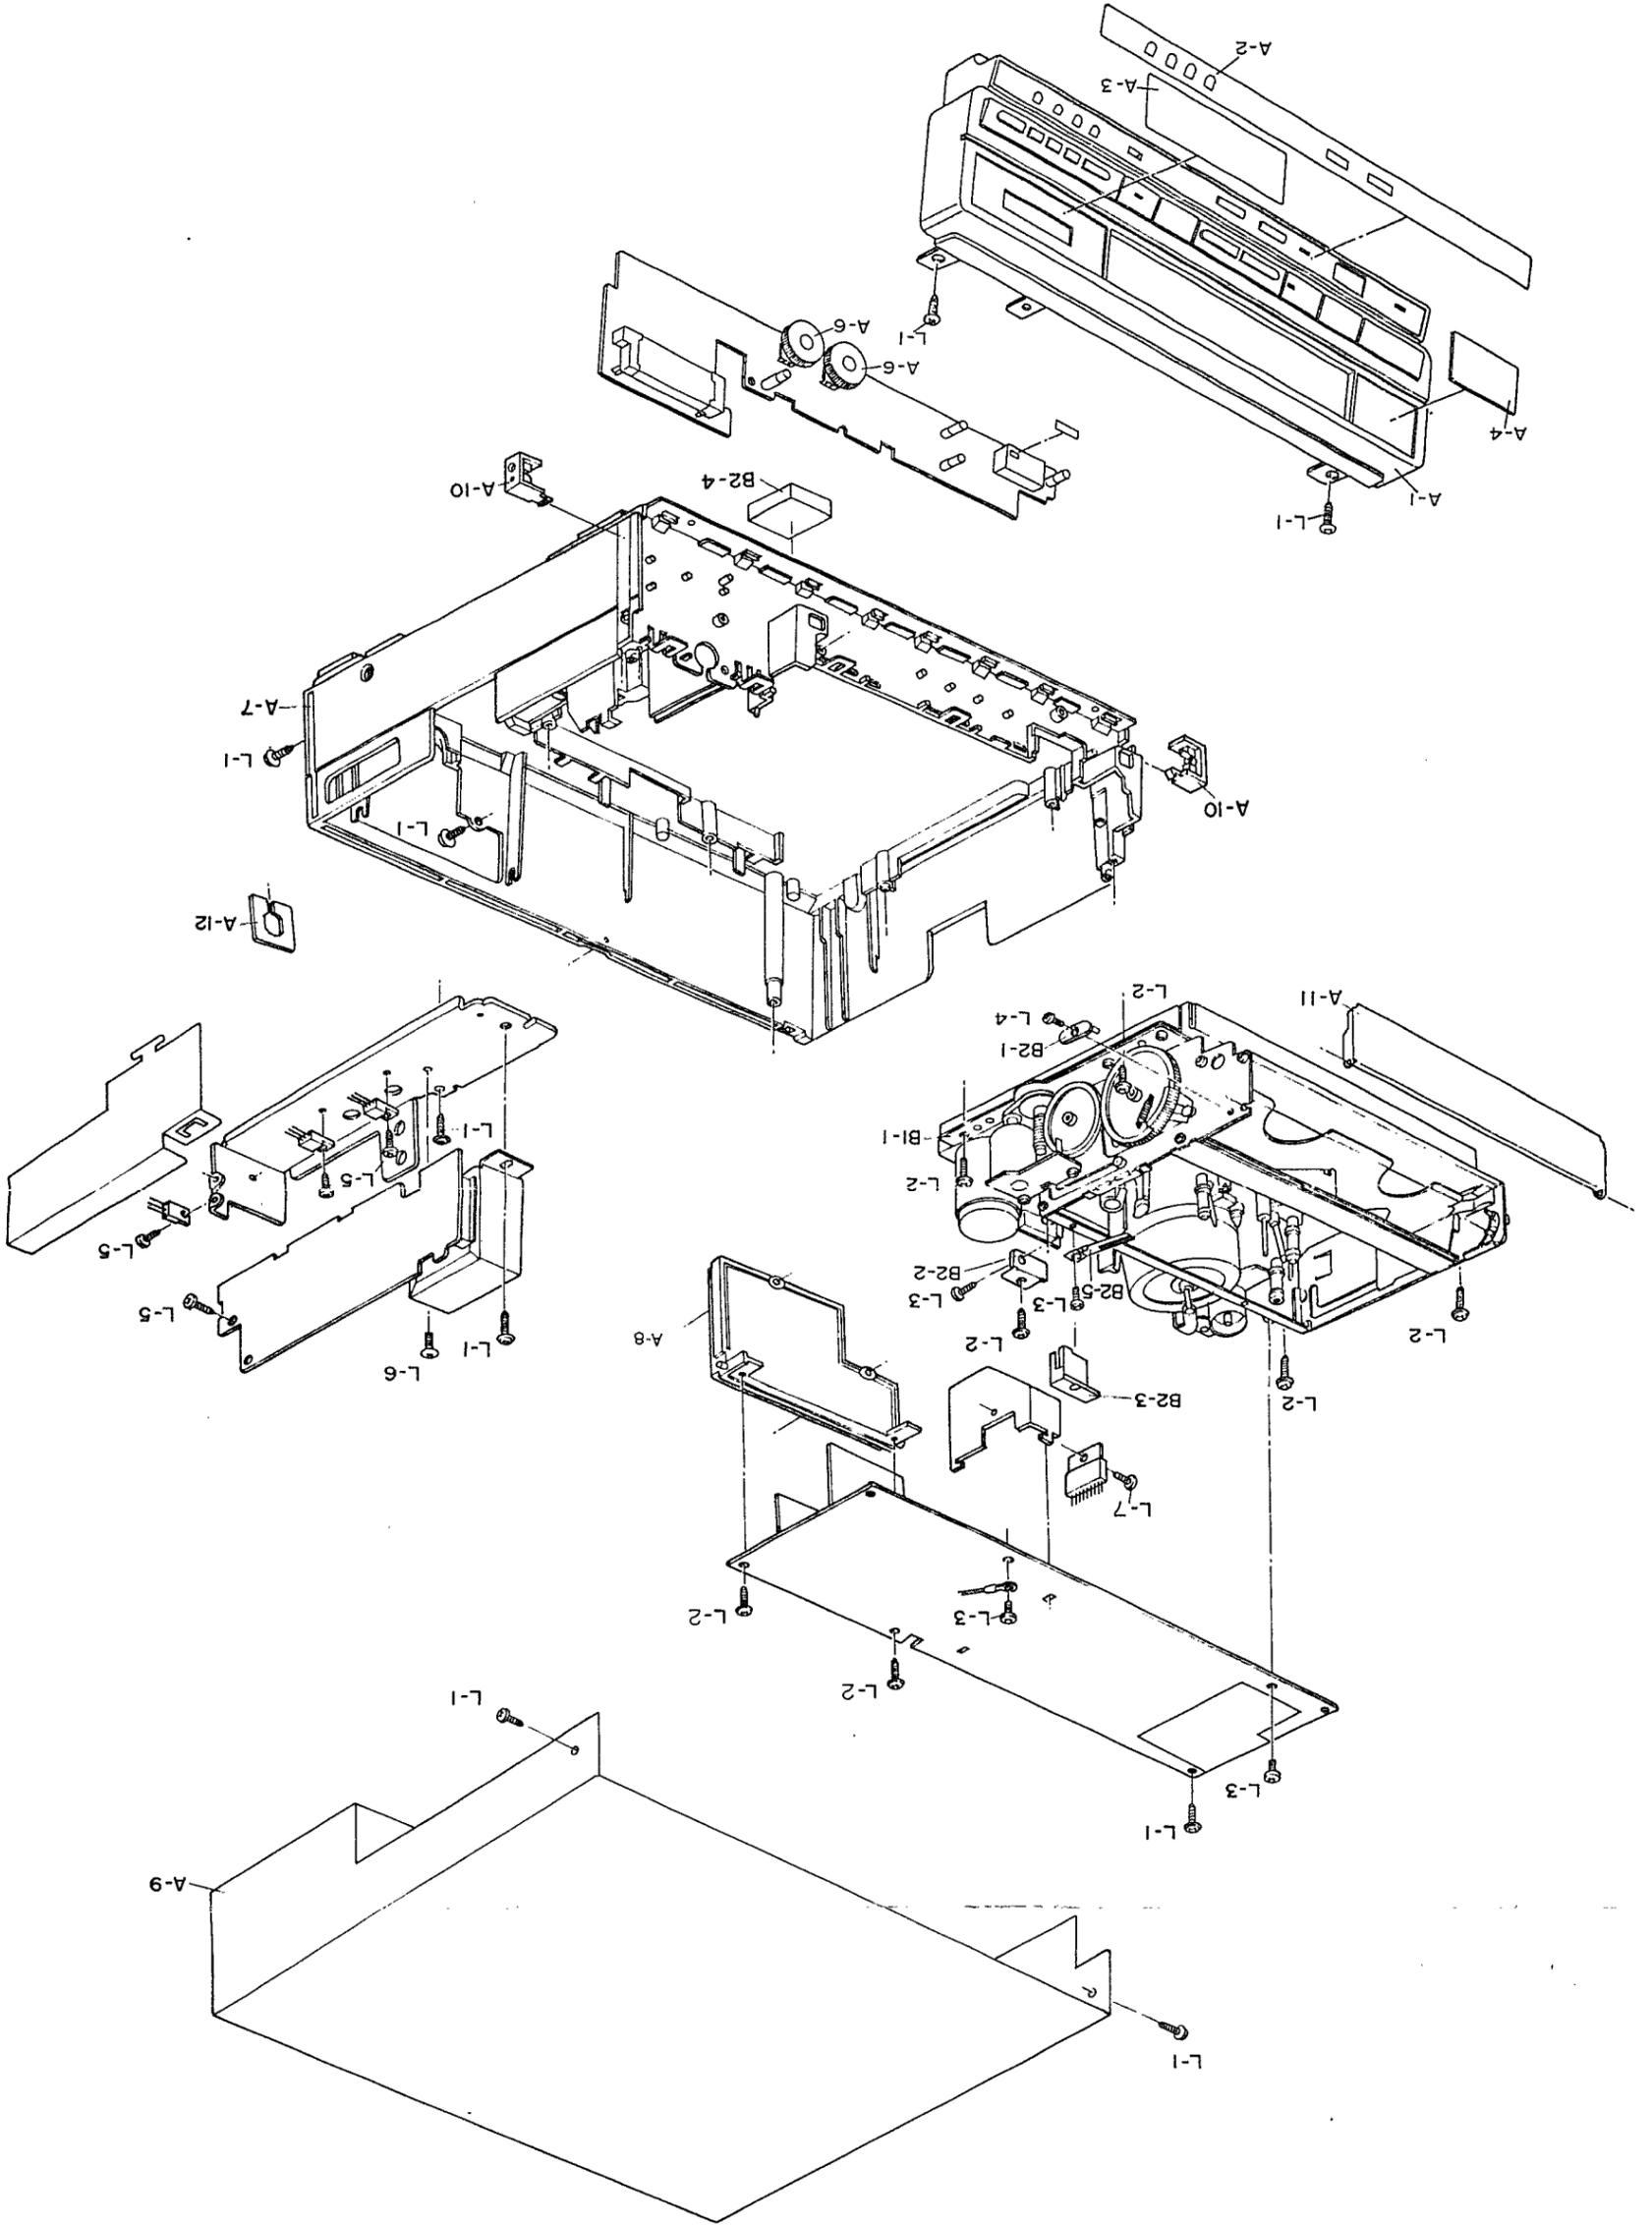

EXPLODED VIEW (DECK 2)

EXPLODED VIEW (DECK 3)

**EXPLODED VIEW (CABINET)**

# ALIGNMENT INSTRUCTIONS

## PREPARATION

Electrical adjustments are required after replacing circuit components and certain mechanical parts. It is important to perform these adjustments only after all repairs and replacements have been completed. Also, do not attempt these adjustments unless the proper equipment is available.

## REQUIRED TEST EQUIPMENT

1. Oscilloscope : Dual-trace with 10 : 1 probe.
2. Frequency Counter
3. Color Monitor
4. Pattern Generator (Color bar with 100% white)
5. AC Voltmeter (RMS)
6. Alignment Tape F6-A (Color bar with 100% white)

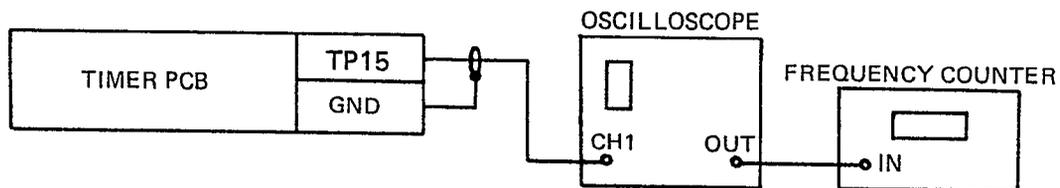

Fig. 1

No.	Item	Test point	Adjustment point	Method	Connection Figure
1	Timer clock E-E Mode	TP15 Ground	TC500	<ol style="list-style-type: none"> <li>1. Connect the oscilloscope across TP15 and Ground.</li> <li>2. Connect the frequency counter to oscilloscope out.</li> <li>3. Make adjustment by TC500 so that the indication of frequency counter becomes 524.288 kHz <math>\pm</math> 1Hz.</li> </ol>	Fig. 1

# TIMING CHARTS

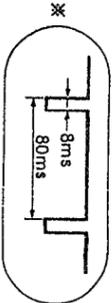

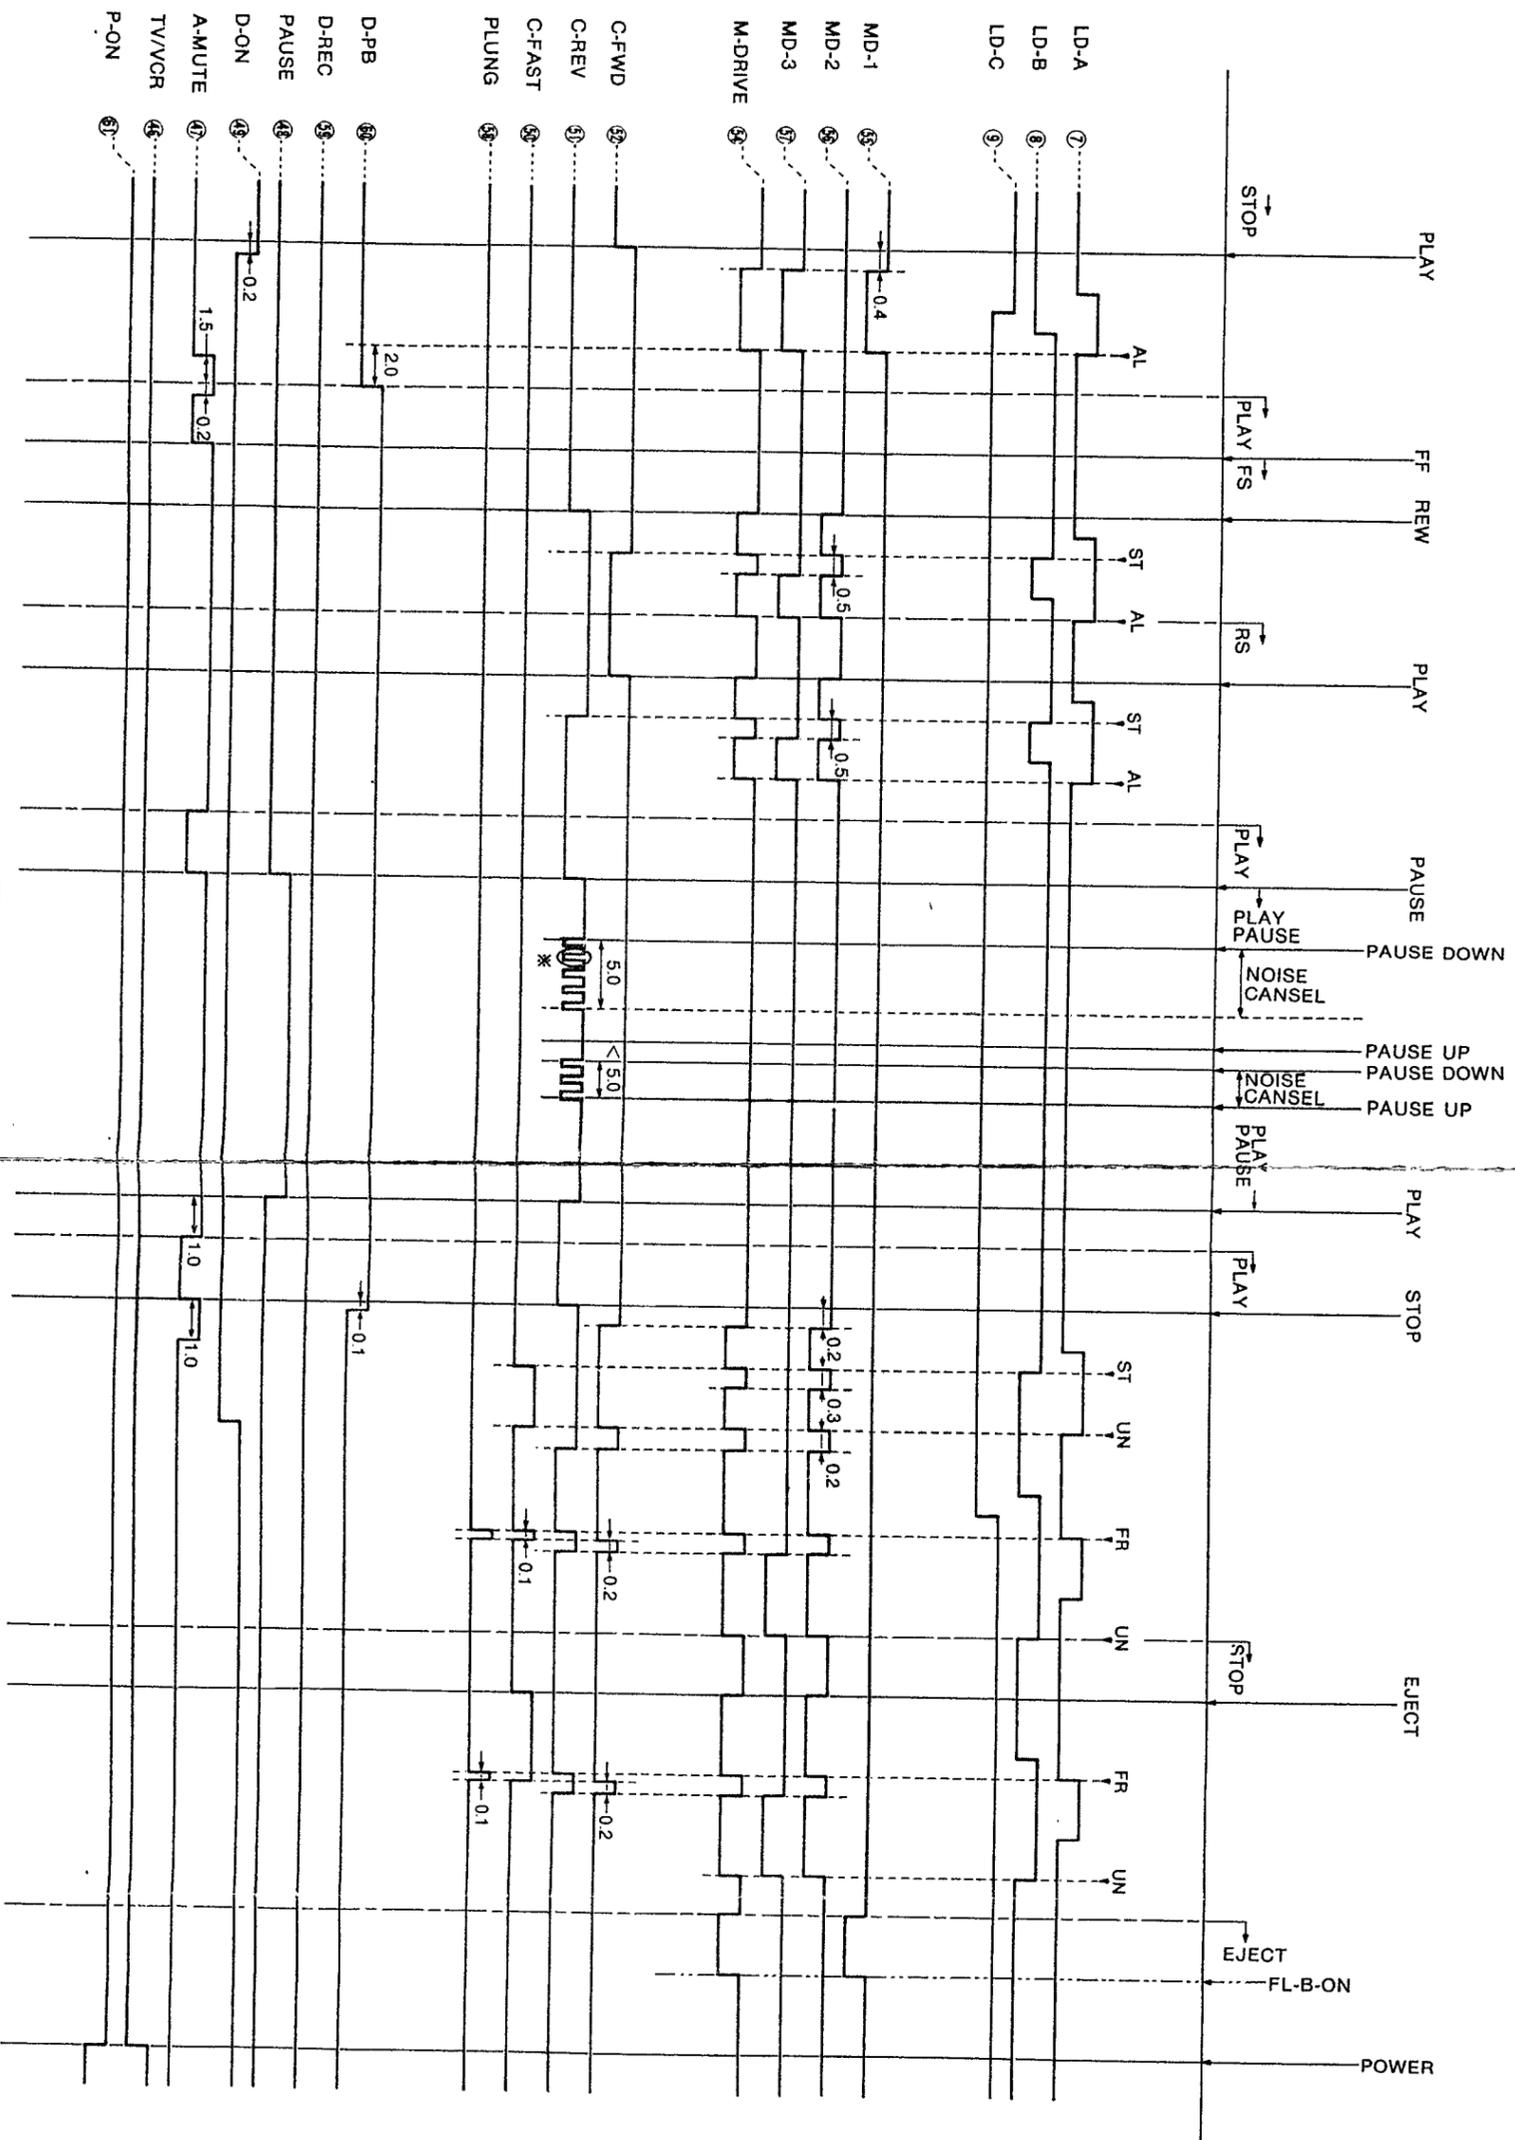

## SYSTEM CONTROL SERVO

1 POWER → TV/VCR → TAPE INSERT → REC → PAUSE → REC → STOP → REW → FF → STOP

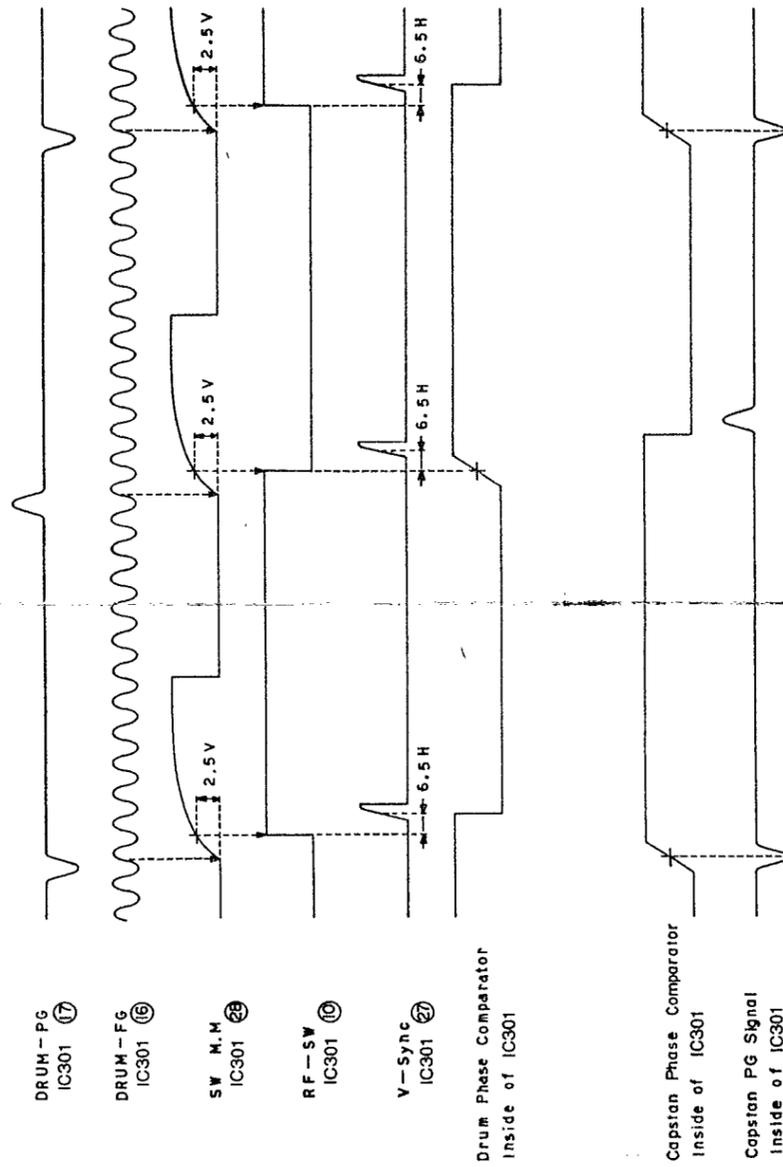

**NOTICE**  
All time values are in second.

2 STOP → PLAY → FF(FS) → REW(RS) → PLAY → PAUSE → NOISE CANCEL → PAUSE → PLAY → STOP → EJECT → POWER

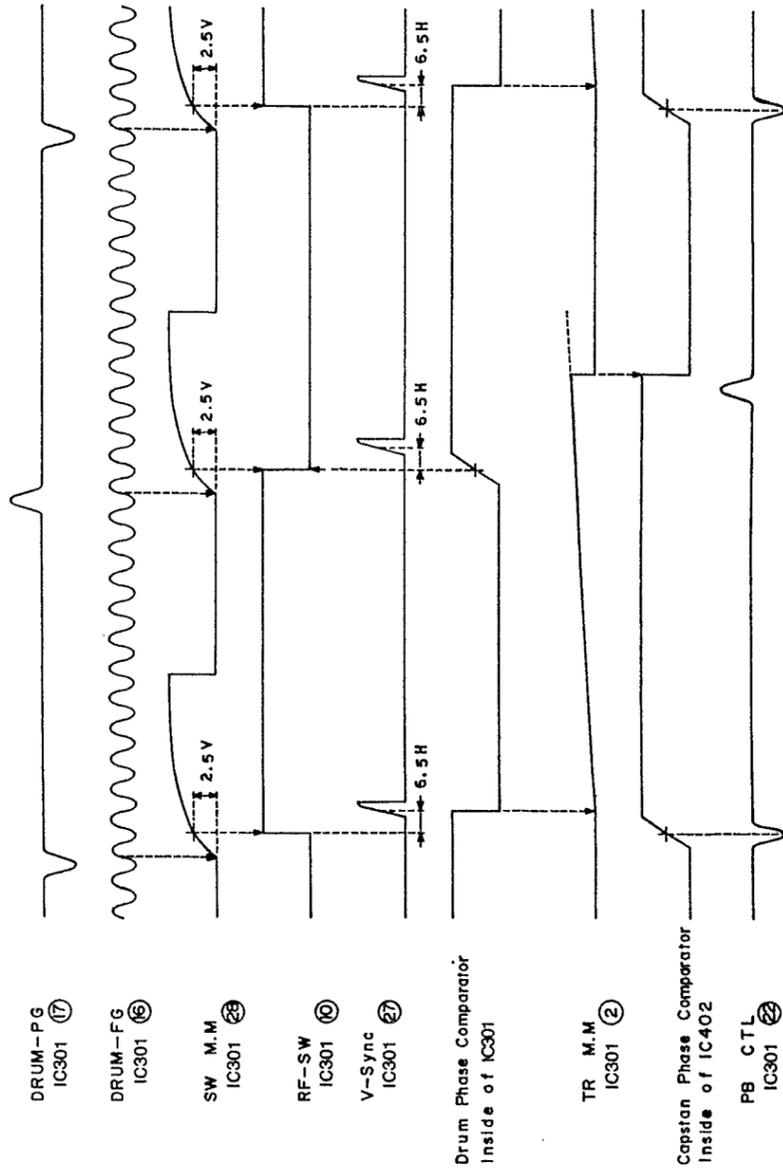

Under "NOISE CANCEL MODE"  
If "NOISE CANCEL MODE" is more than "5"sec. it will  
transfer to "PAUSE MODE" automatically.

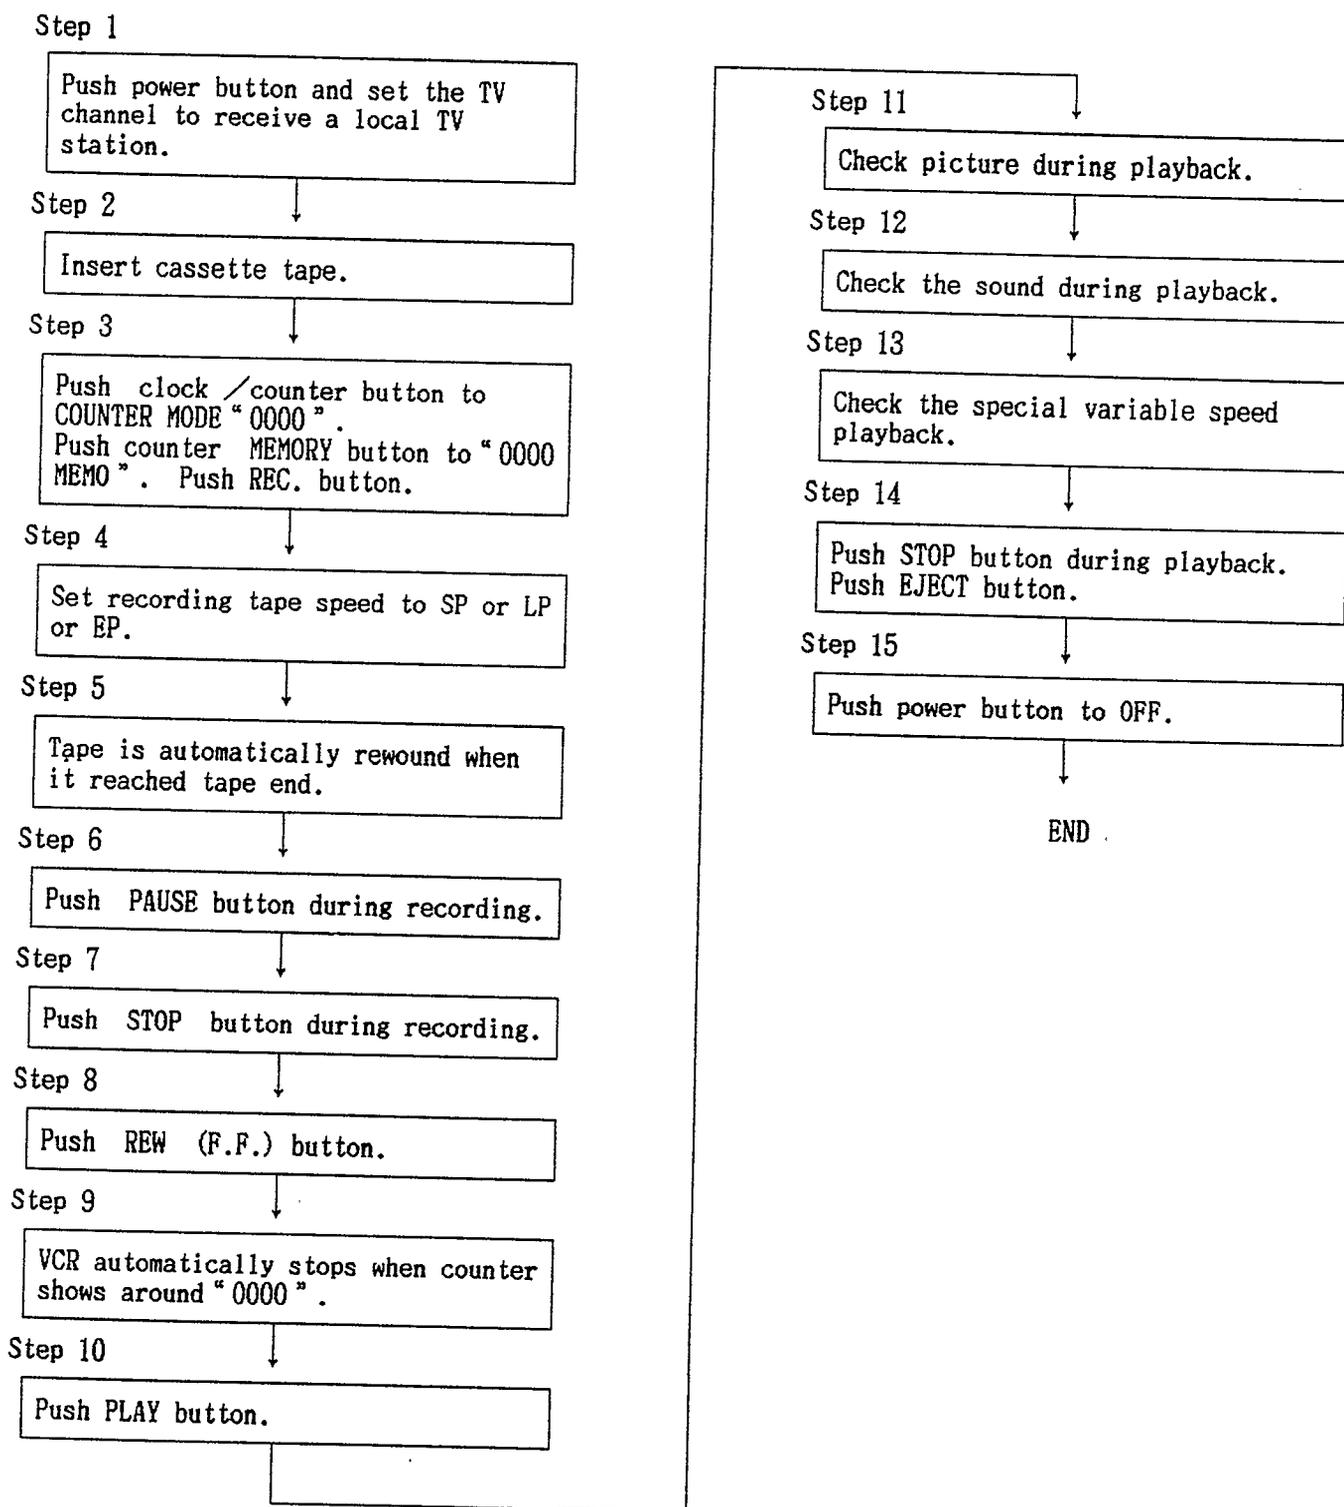

## DRUM AND CAPSTAN SERVO (RECORD MODE)

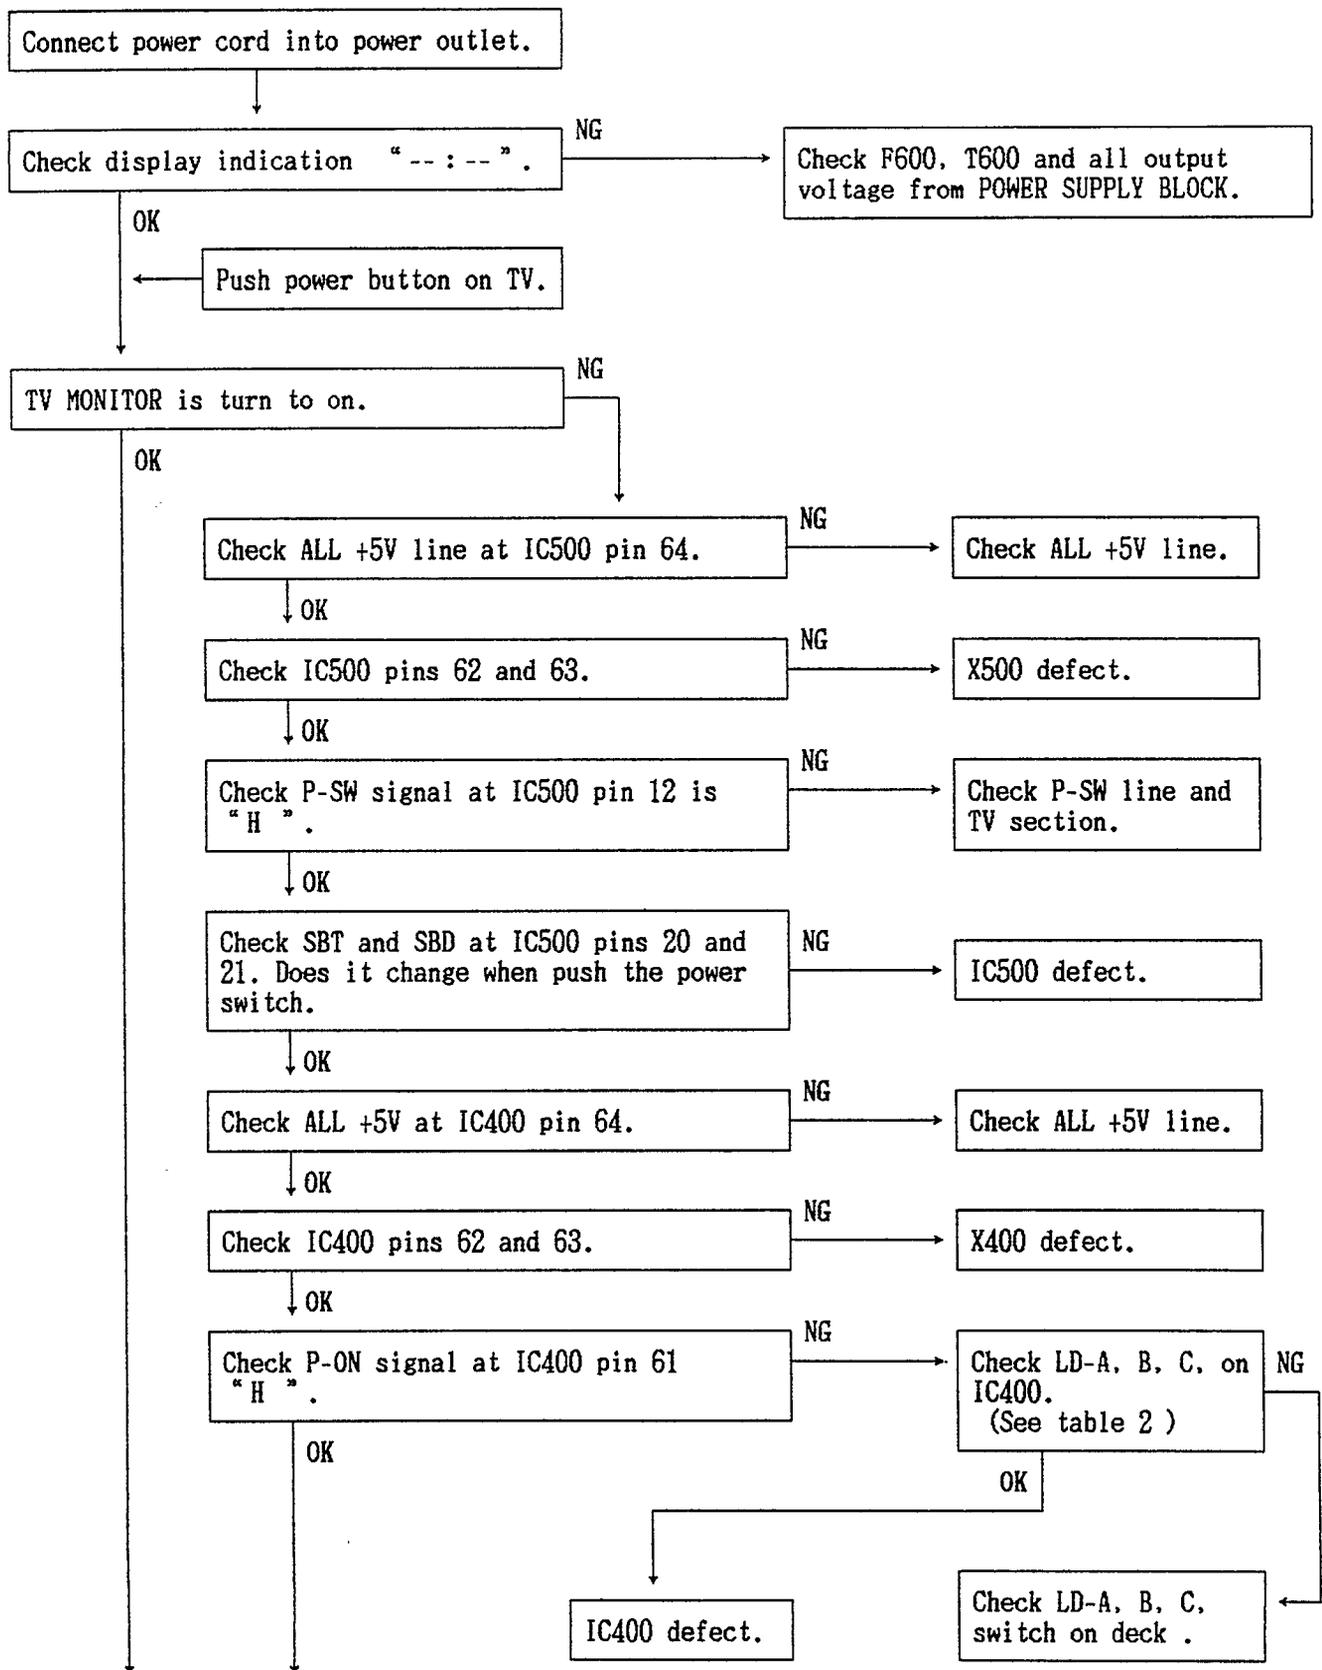

## DRUM AND CAPSTAN SERVO (PLAYBACK MODE)

# TROUBLESHOOTING GUIDE

Step 1

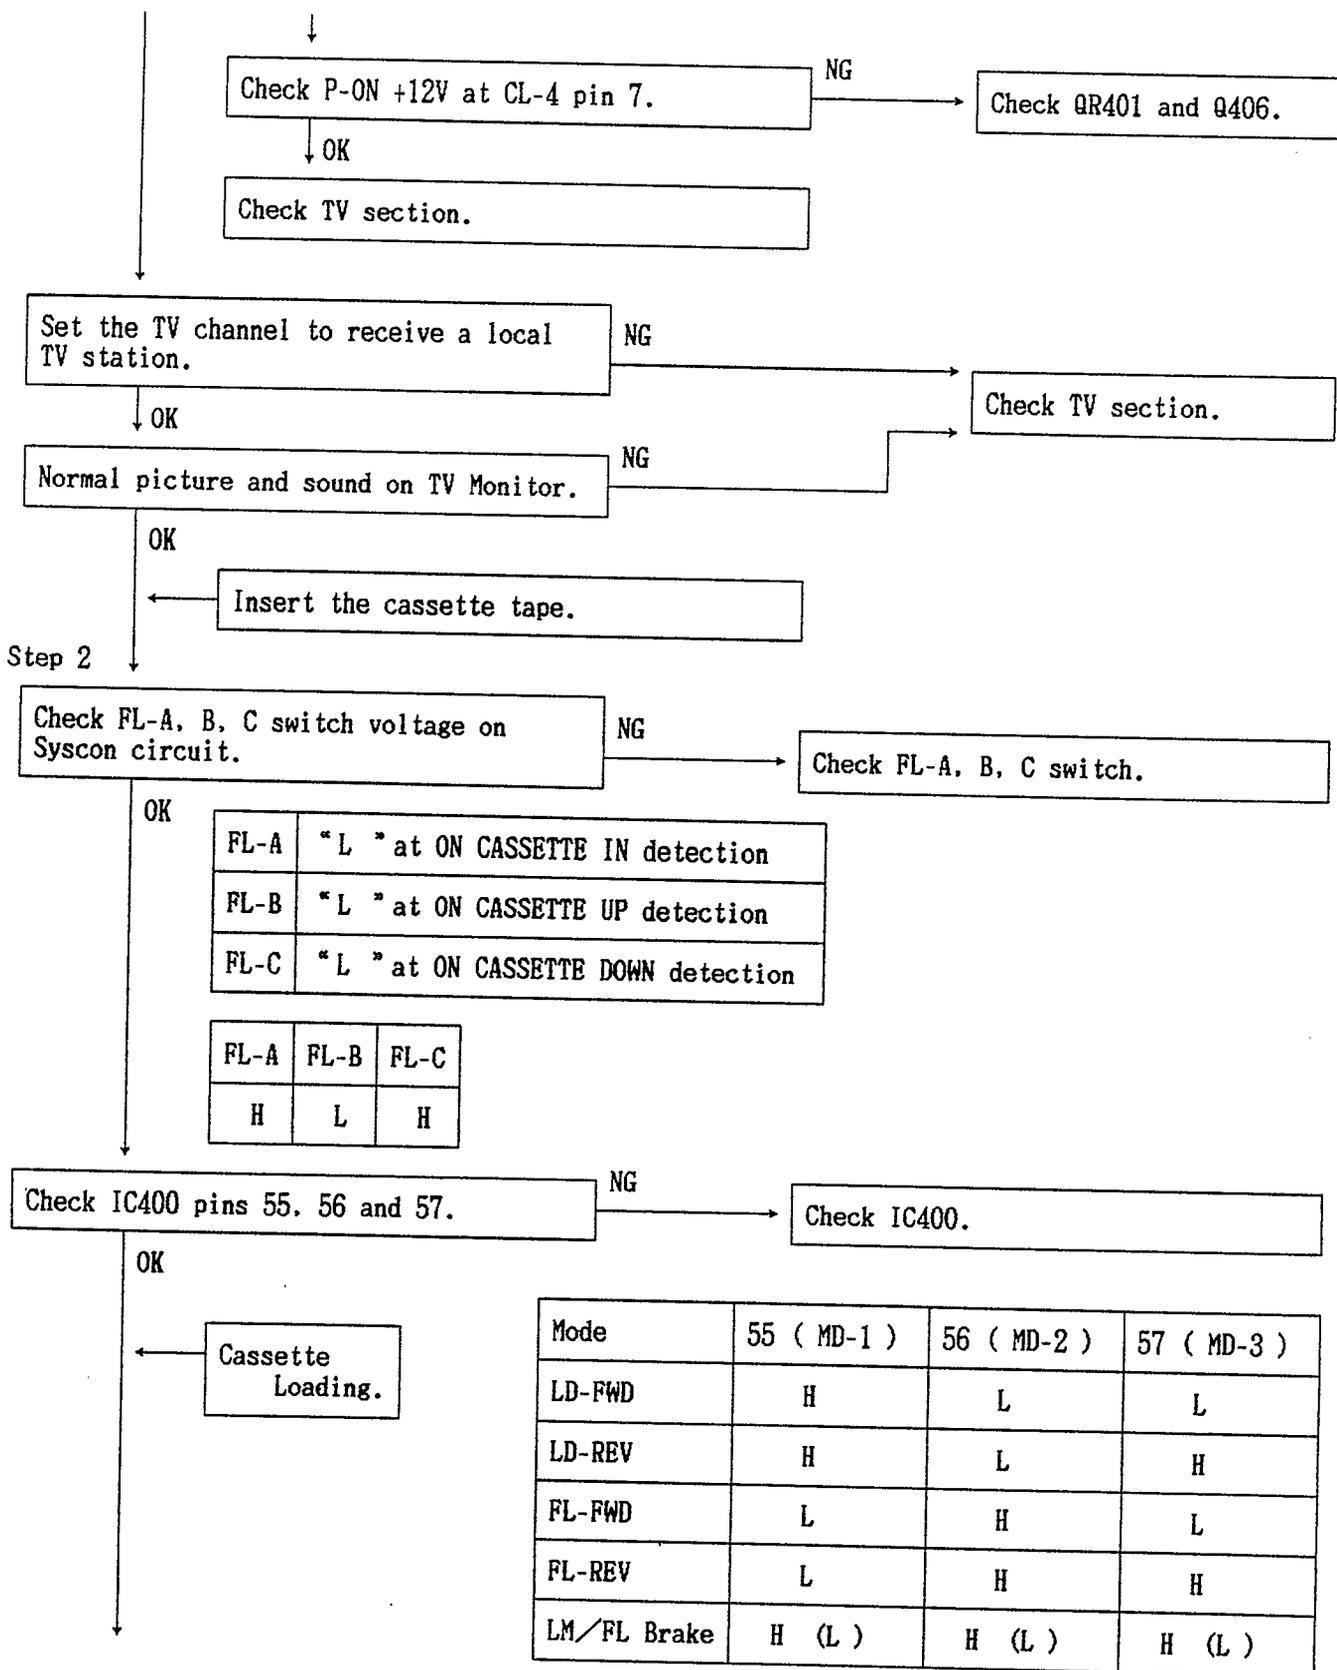

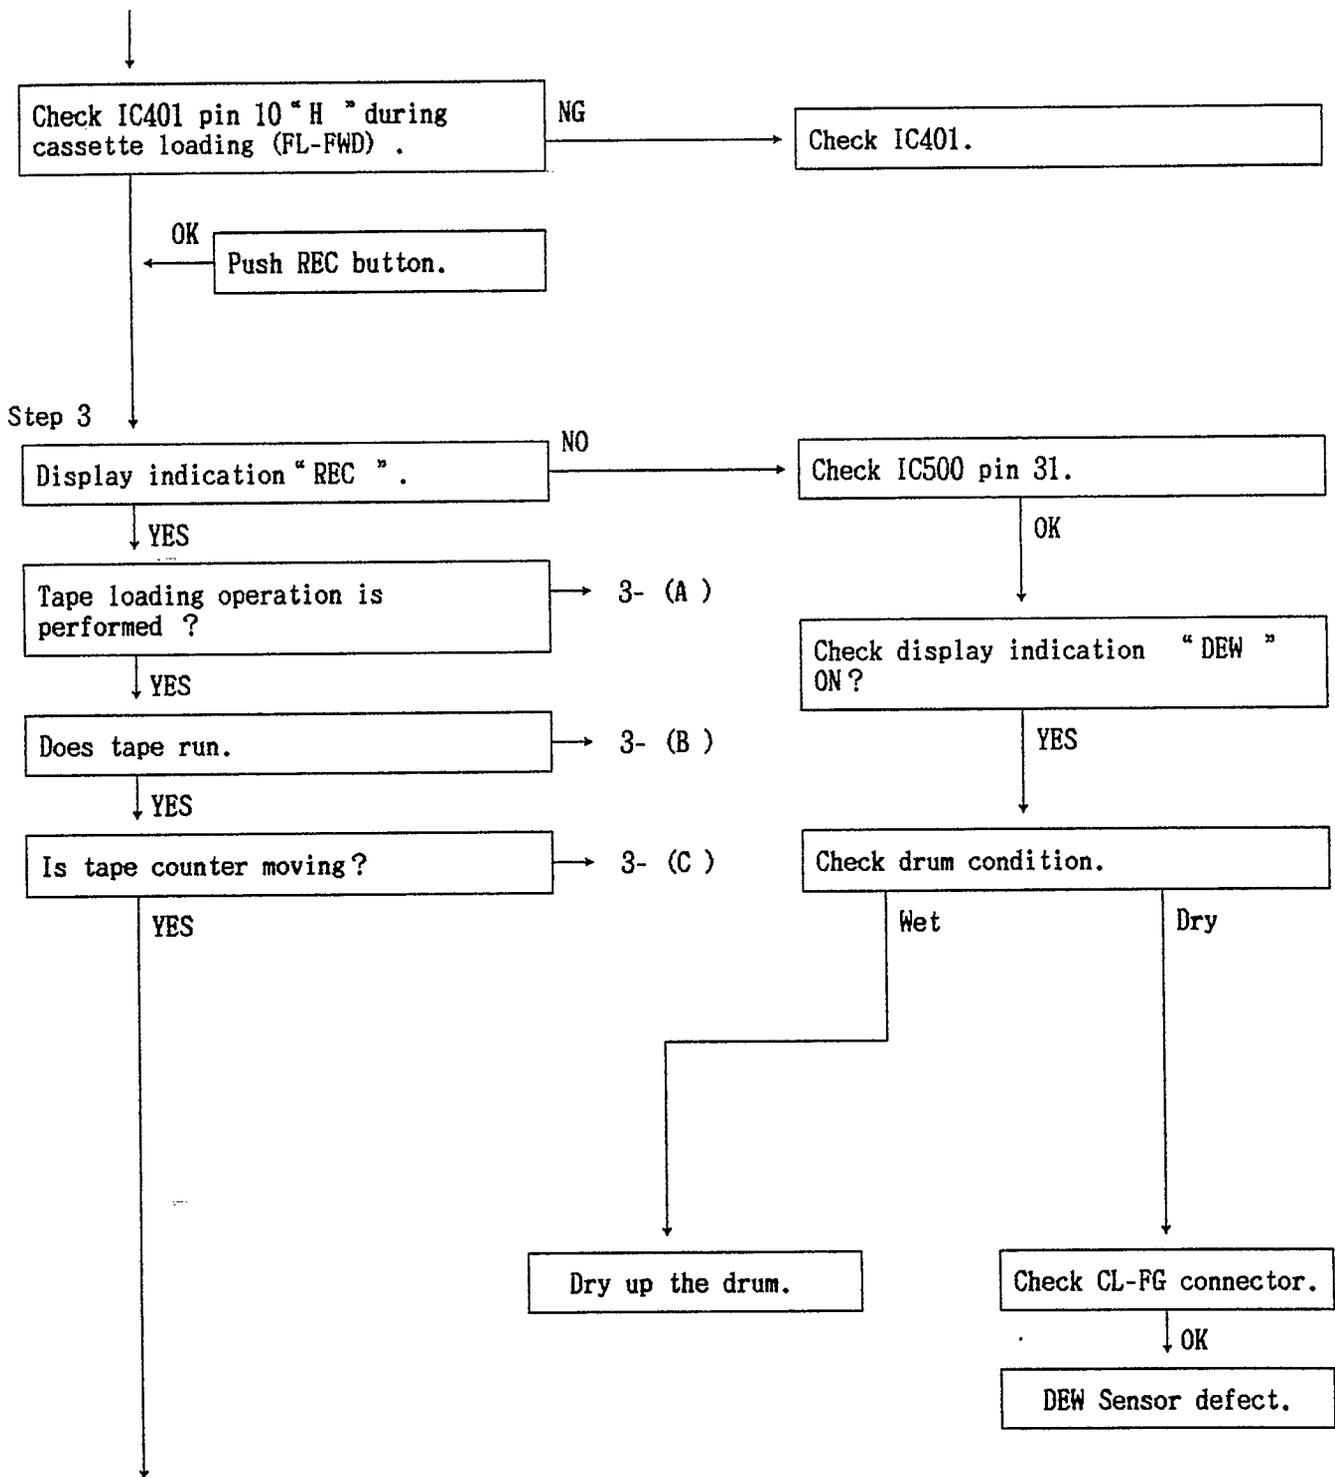

Table 1.

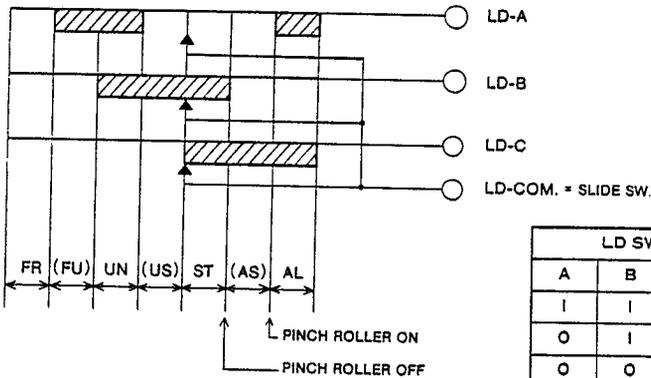

3- (A)

Check LD-A, B, C. (See Table 2.)

OK

\* When SYSTEM CONTROL IC has run away SYSTEM CONTROL IC will not accept any mode. At this time, must AC CORD disconnect to reset the SYSTEM CONTROL IC.

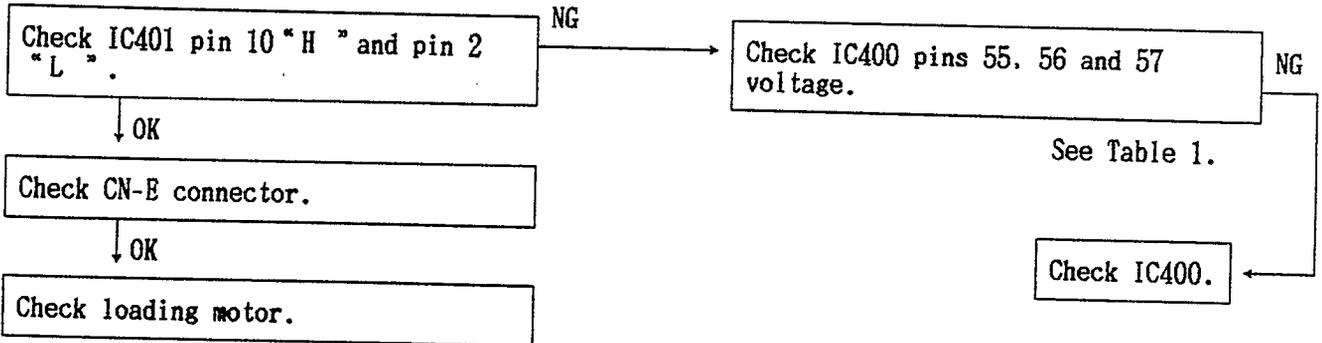

Position of loading switch

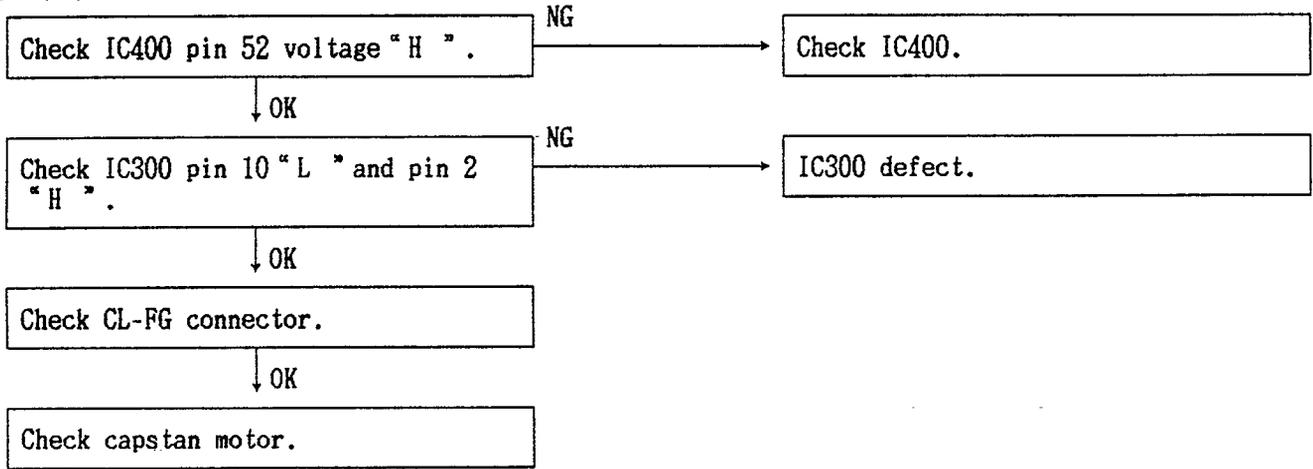

LD SW			Symbol	Position
A	B	C		
1	1	1	FR (FR LOADING)	FF. REW
0	1	1	(FU)	
0	0	1	UN (UN-LOADING)	STOP EJECT
1	0	1	(US)	
1	0	0	ST (SHORT STOP)	Loading motor is stopped temporarily at unloading.
1	1	0	(AS)	
0	1	0	AL (AFTER-LOADING)	PLAY RECPAUSE SHORT REW

0:MAKE 1:BREAK  
Break means intermediate position.

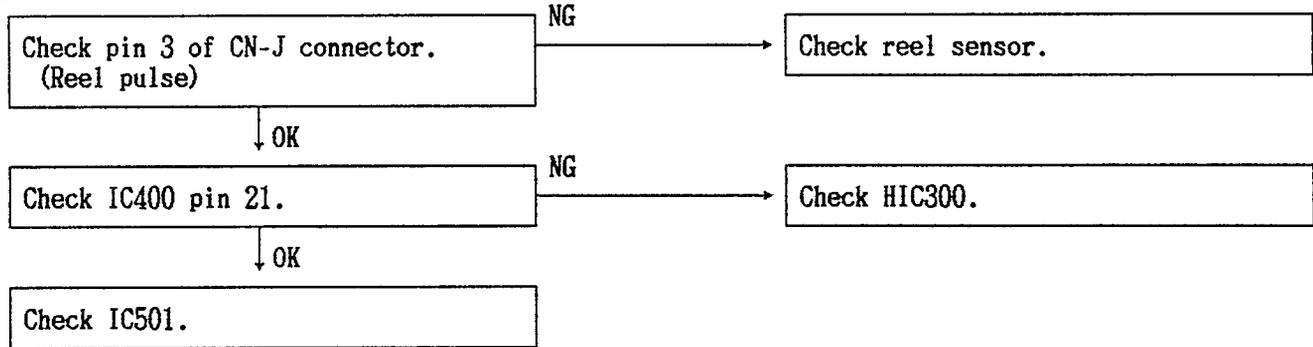

Table 2.

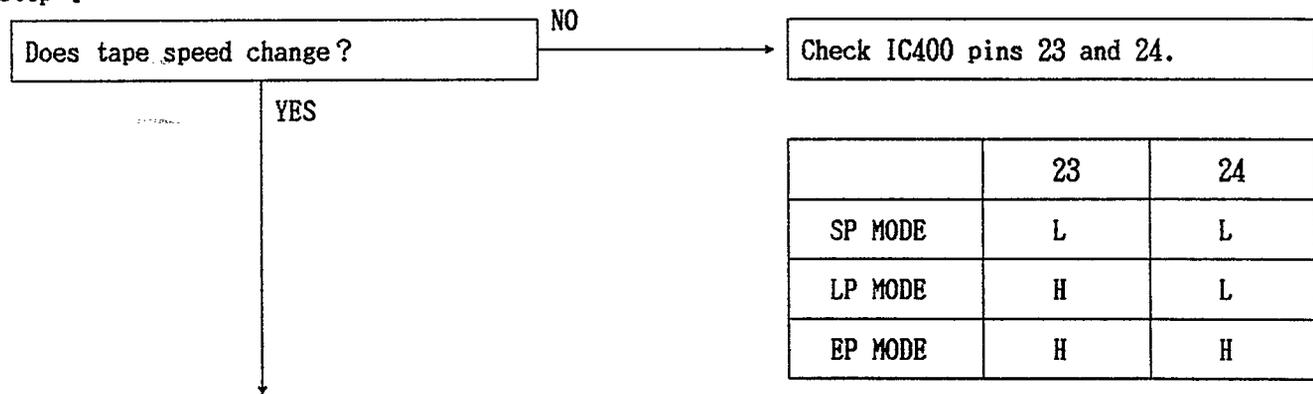

3- (B)

3- (C)

Step 4

	23	24
SP MODE	L	L
LP MODE	H	L
EP MODE	H	H

Step 5

Tape is automatically rewound at  
TAPE end.

YES

Step 5 OK, proceed to Step 6.

Check connection of CL-I pin 3  
"L".

NG

Check end sensor.

OK

Check IC400 pin 19 "H".

NG

Check Q401.

OK

Check Step 8.

Push PAUSE button during recording.

Step 6

Capstan motor is stopped?

NO

Check IC400 pin 48 "H".

NG

OK

Check IC400 pins 51 and 52 "H".

NG

OK

Check IC300 pins 2 and 10.

Check IC400 and IC500.

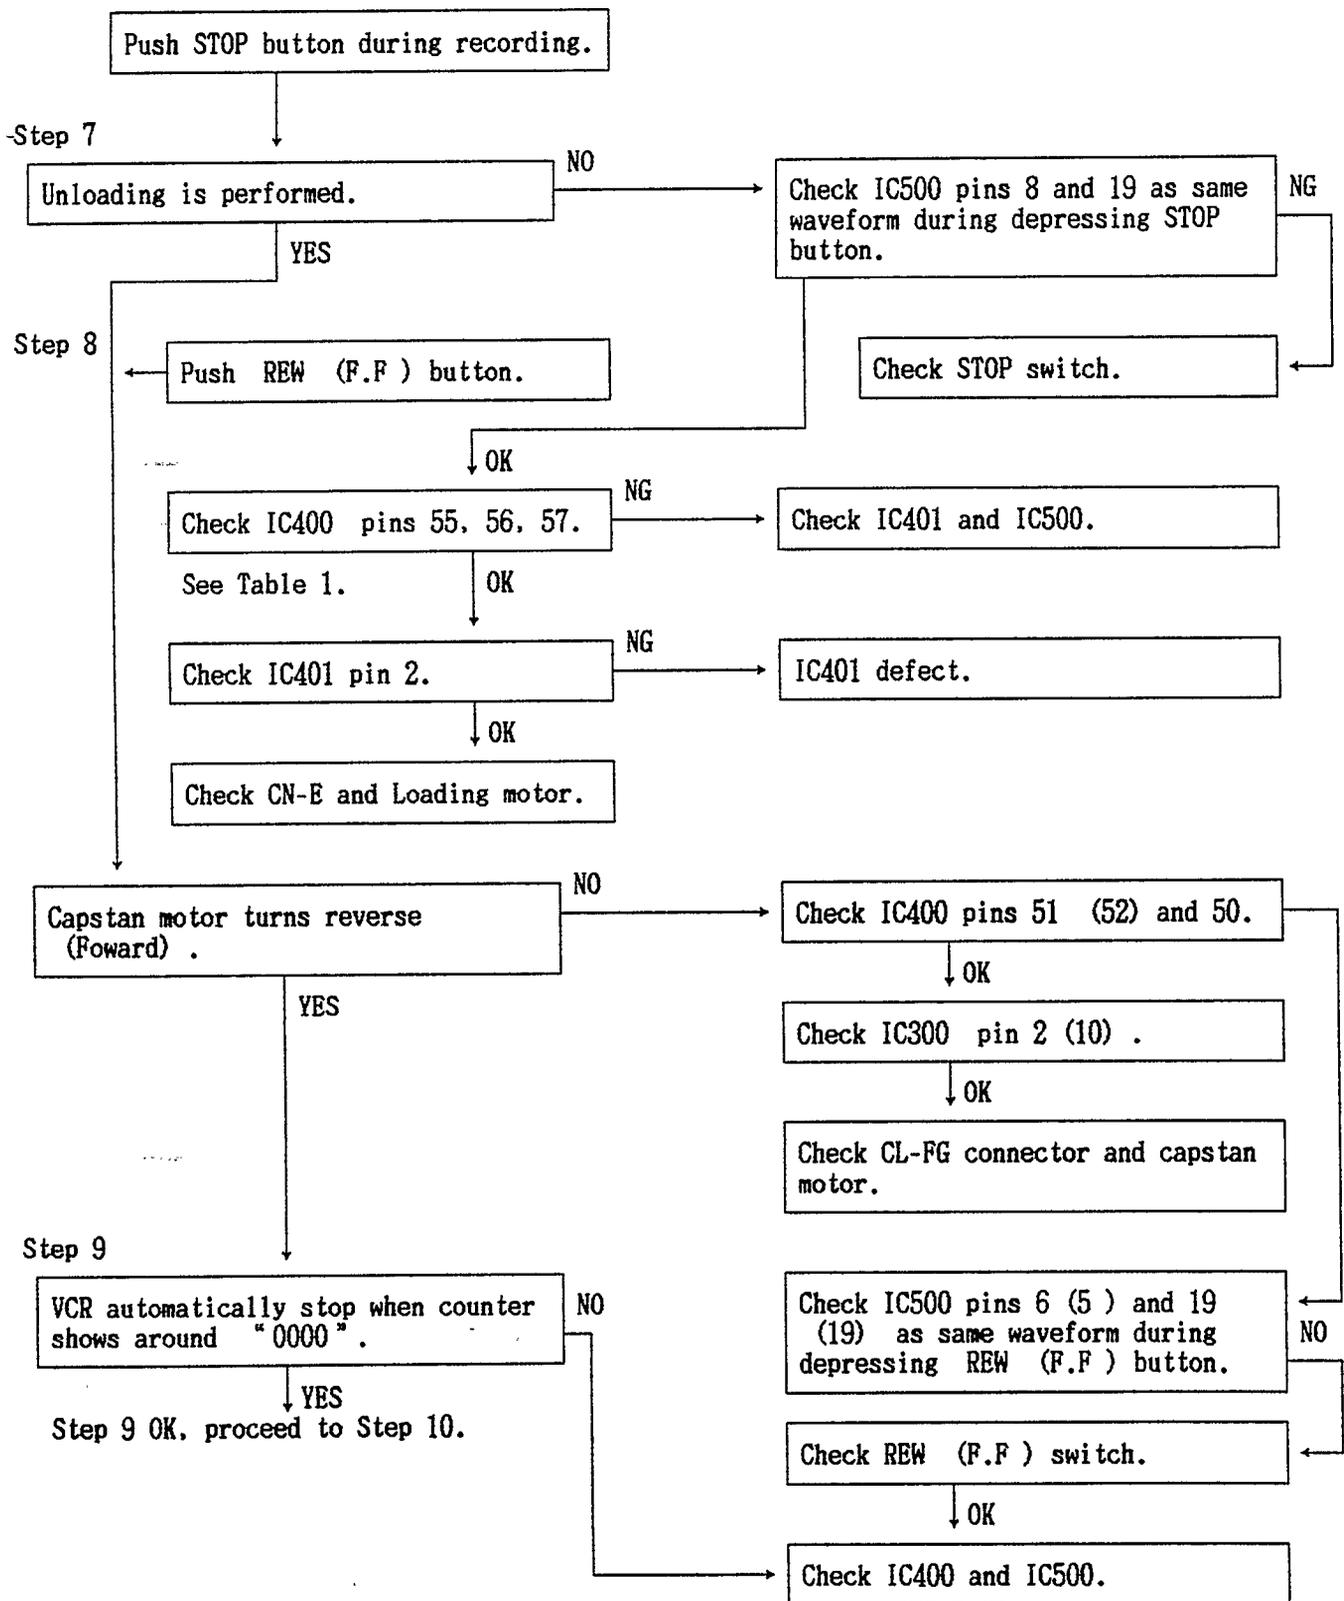

OK

Check IC500 pins 9 and 19 as same  
waveform during depressing PAUSE  
button.

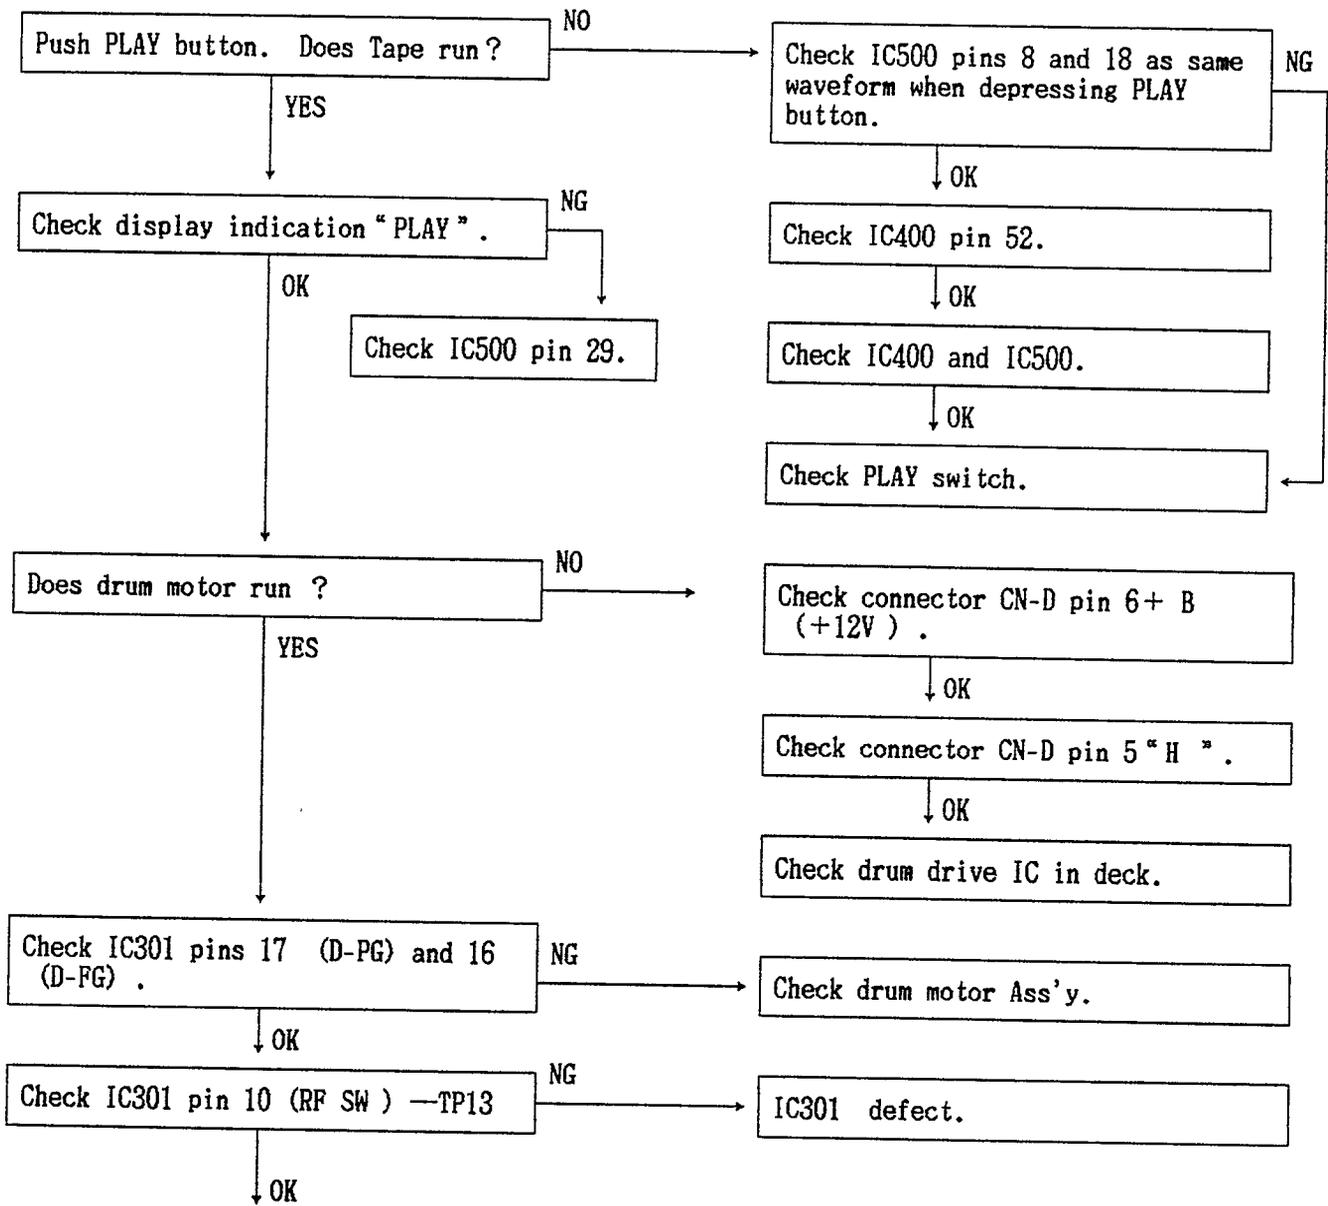

NG

Check PAUSE switch.

Step 6 OK, proceed to Step 7.

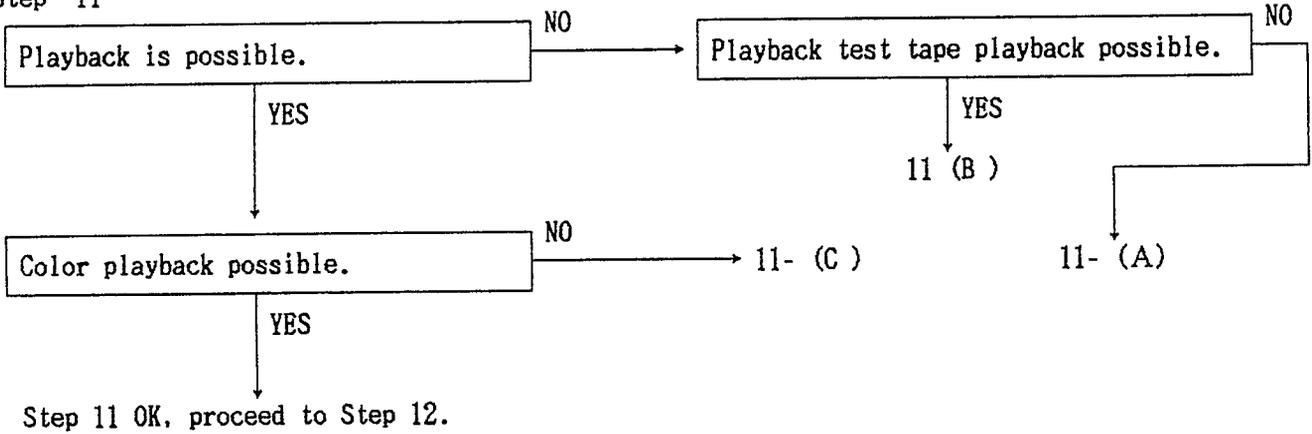

Step 10

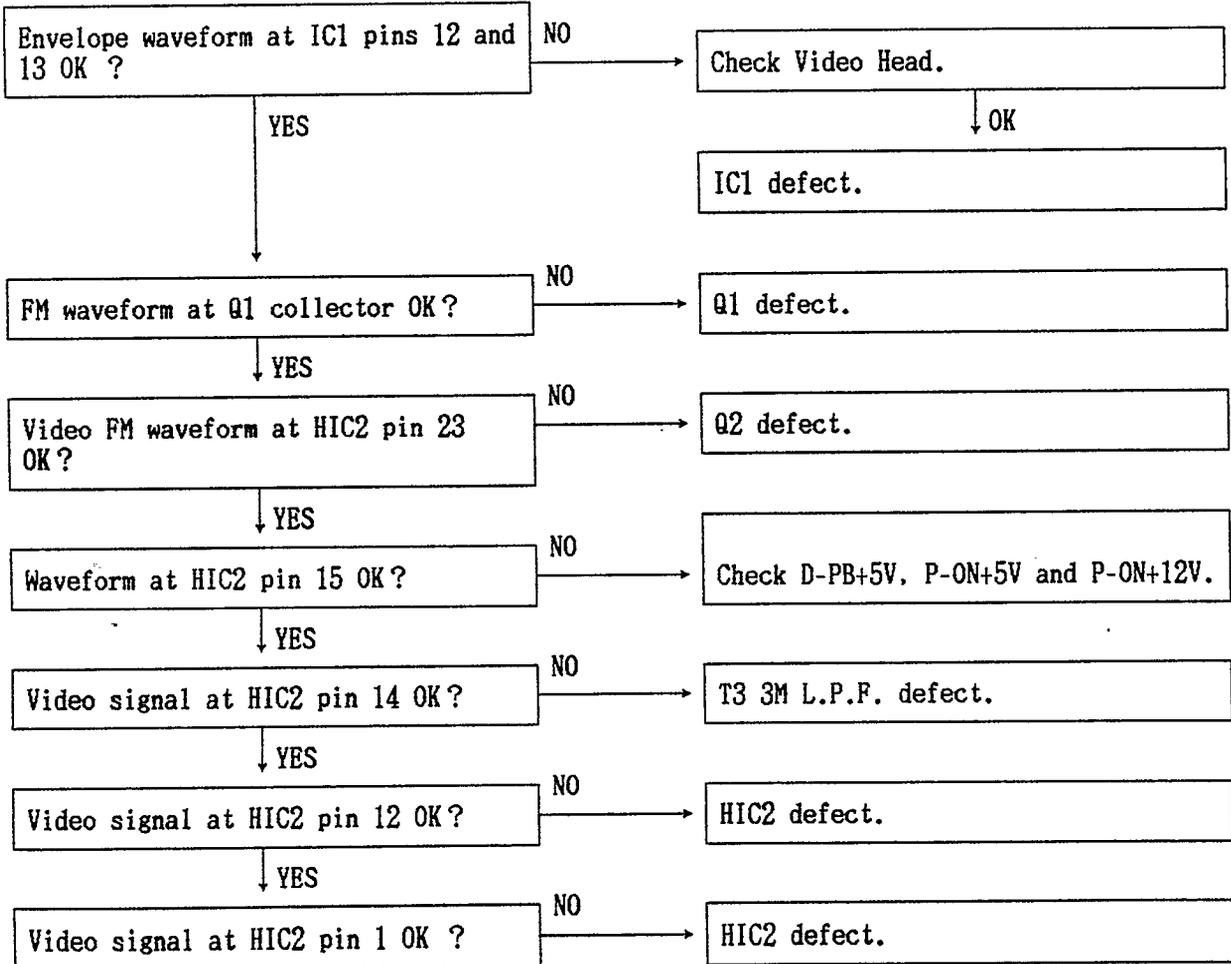

Step 10 OK. proceed to Step 11.

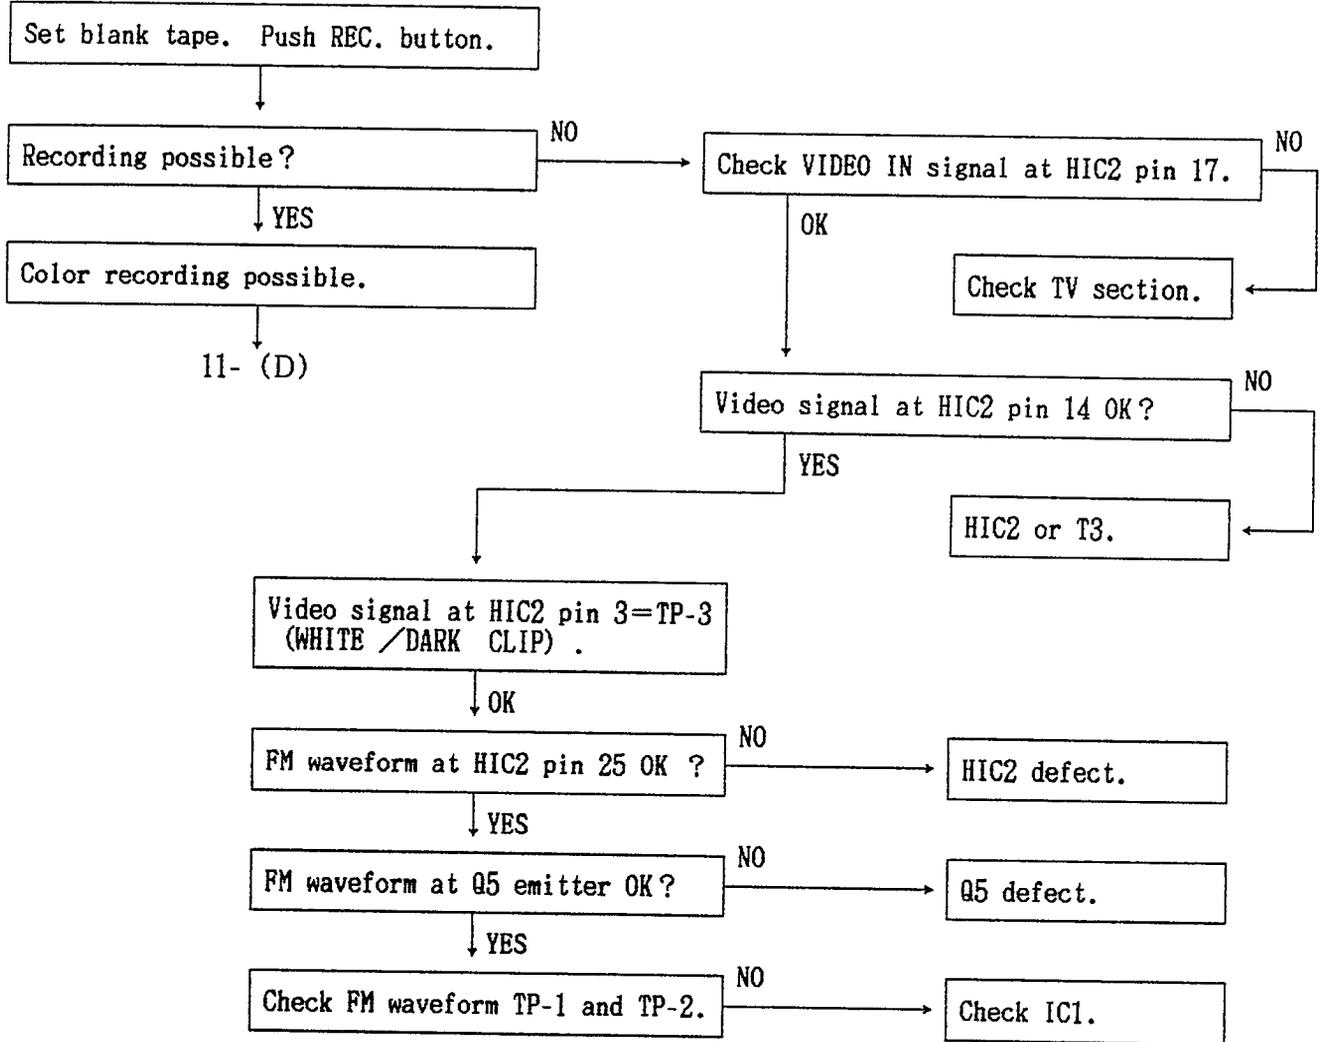

Step 11

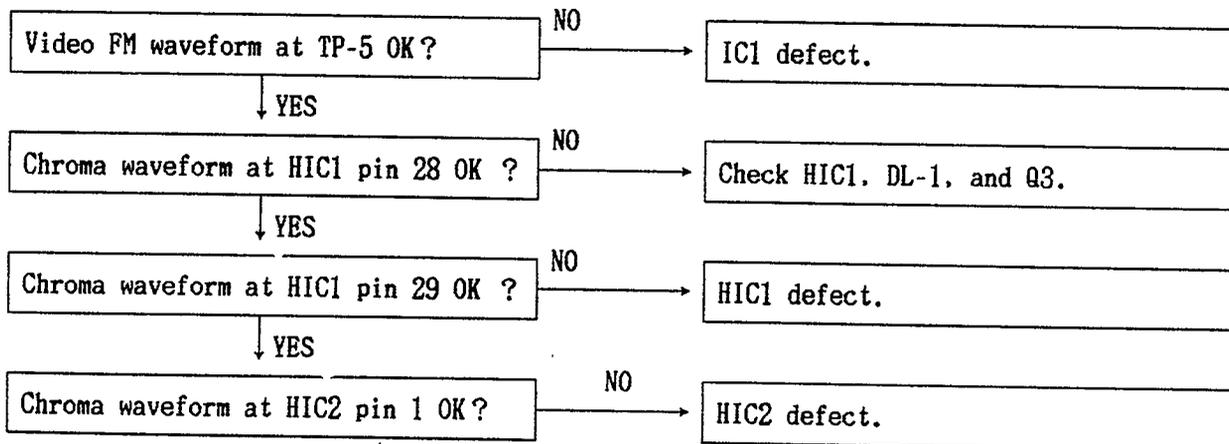

11- (A)

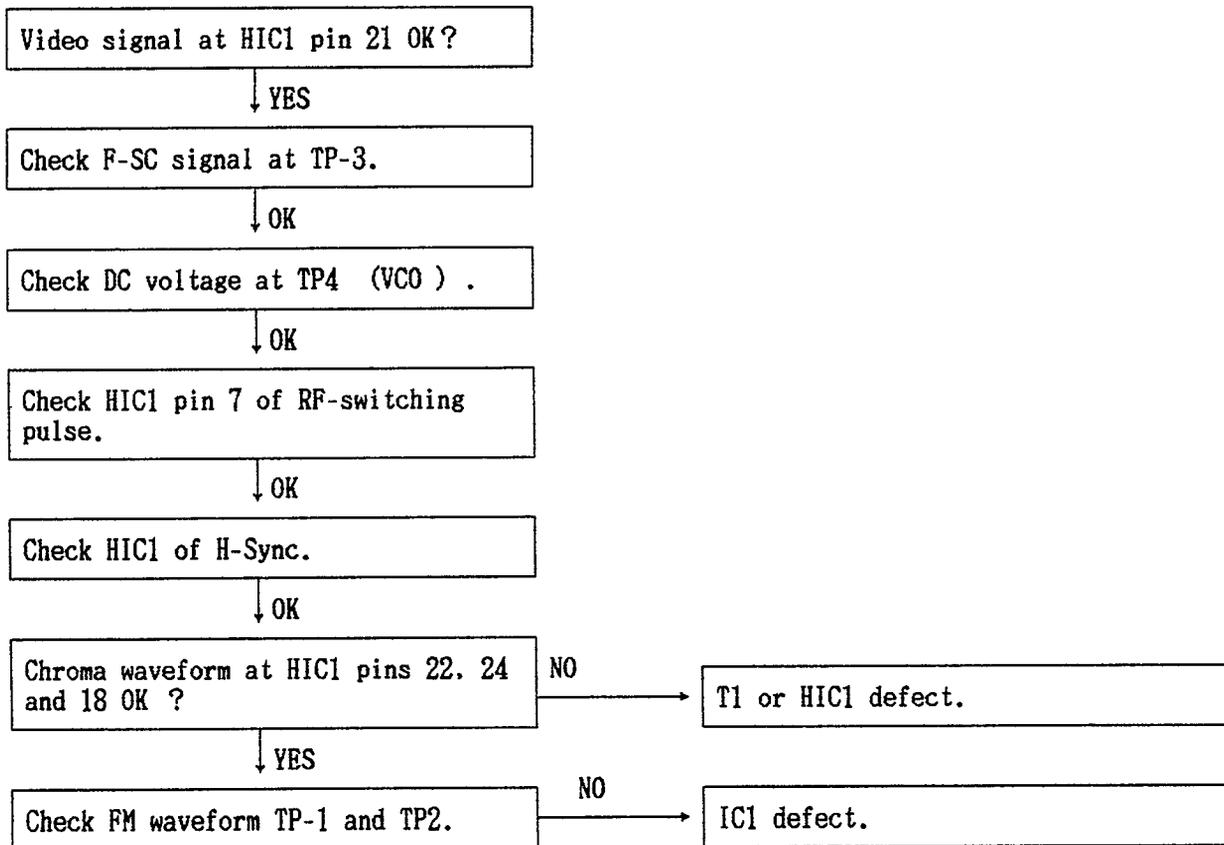

11- (B)

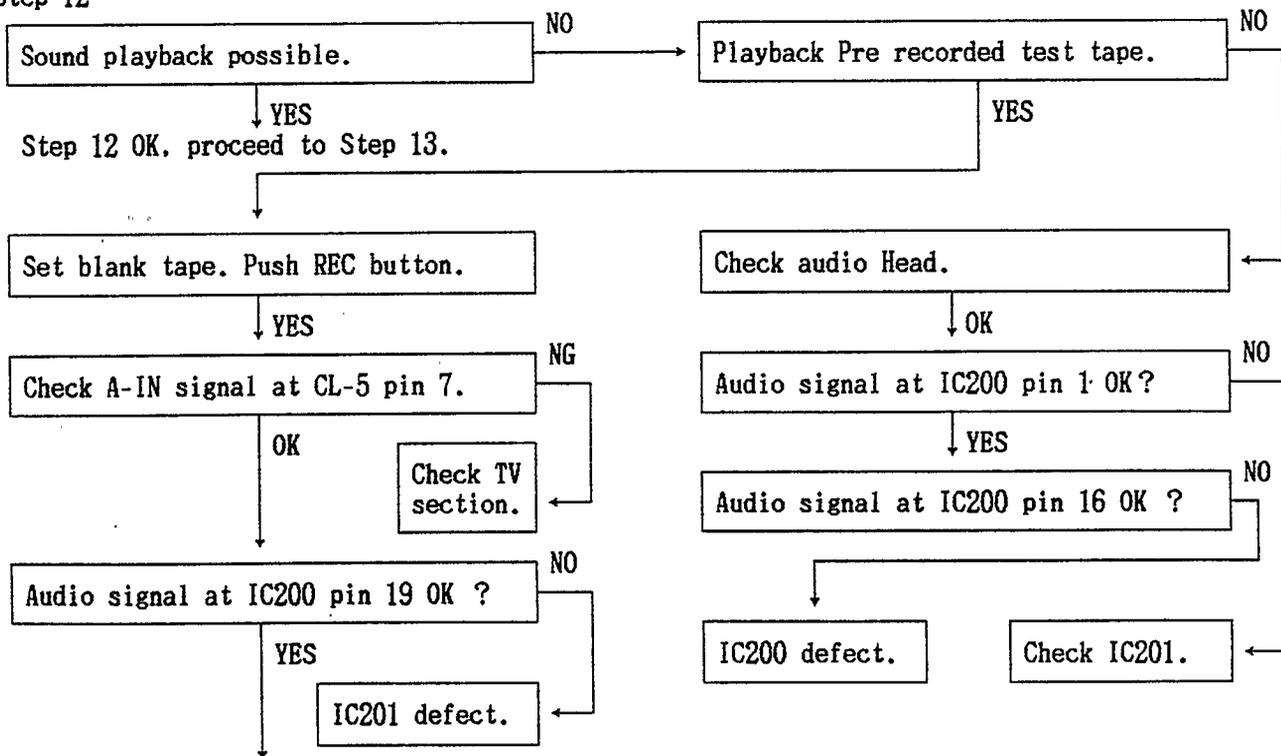

11- (C)

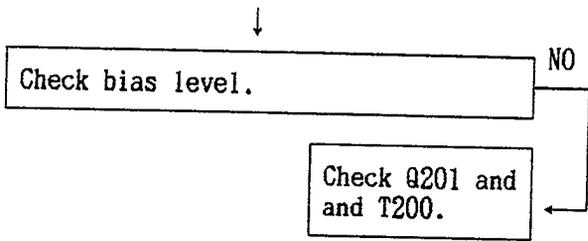

11- (D)

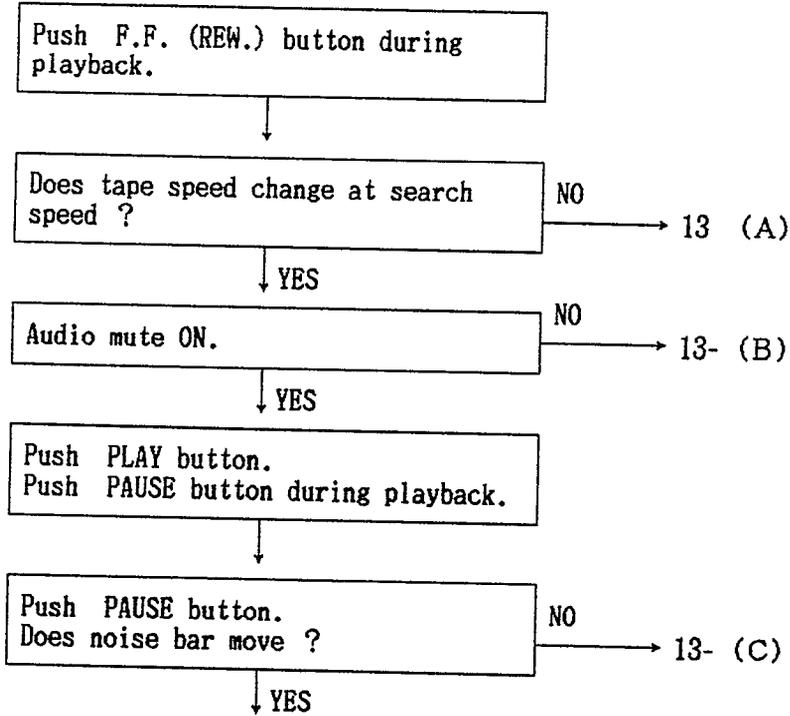

Step 12

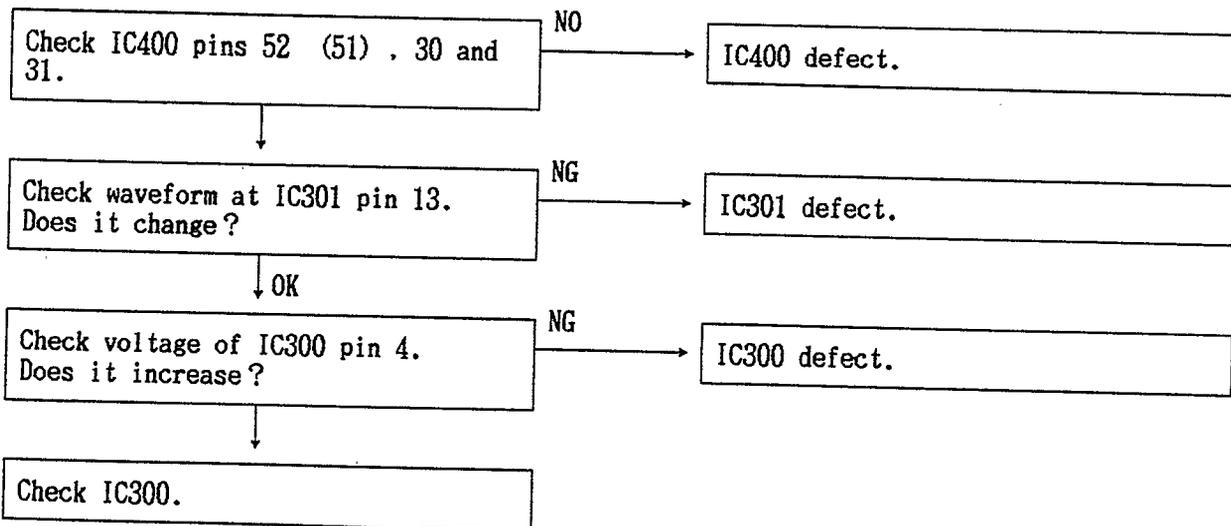

Step 13

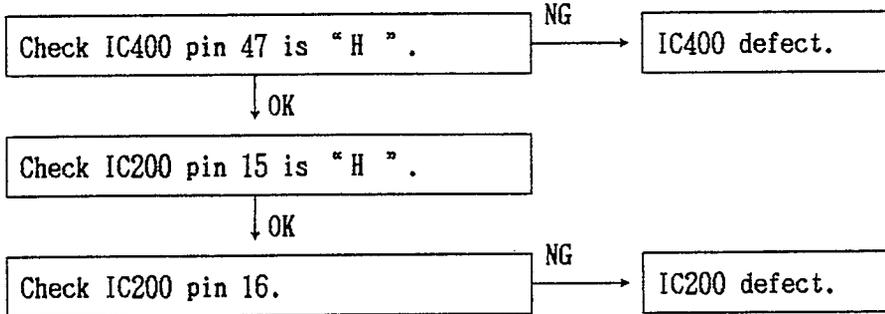

Step 13 OK, proceed to step 14.

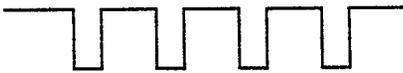

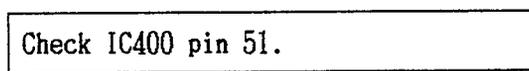

13- (A)

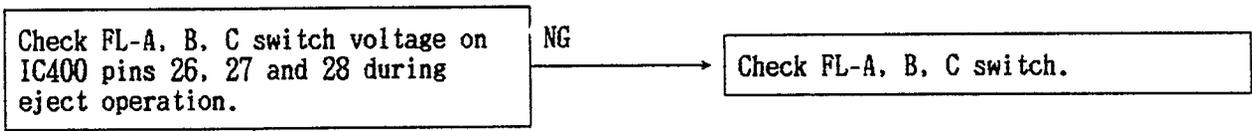

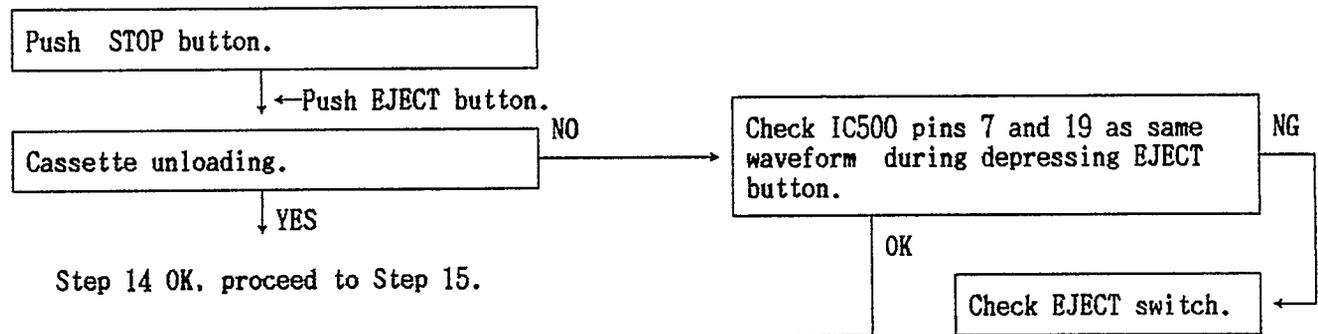

13- (B)

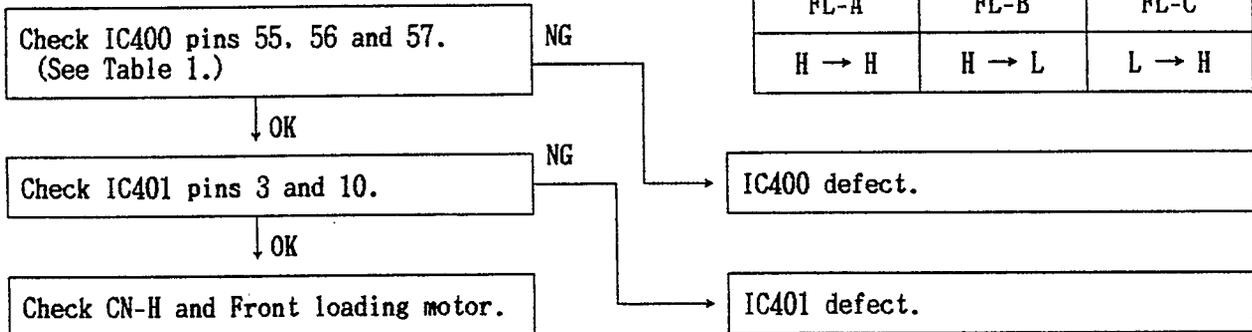

13- (C)

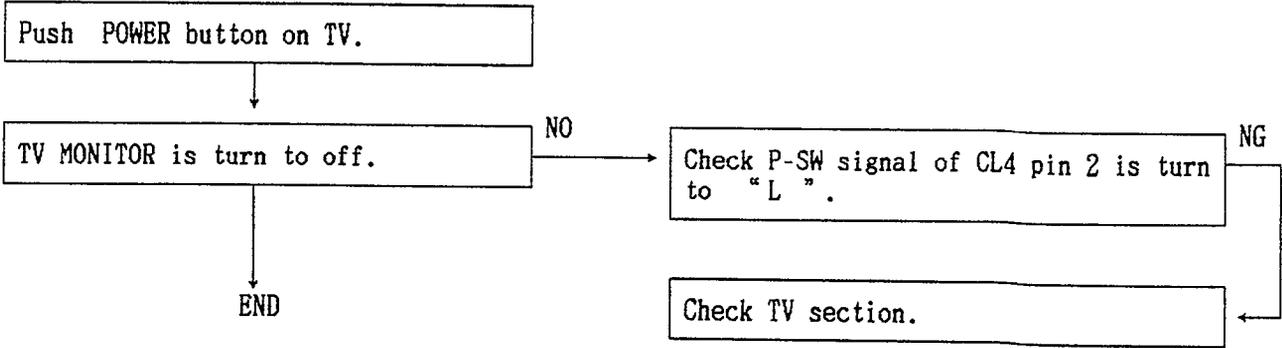

Step 14

FL-A	FL-B	FL-C
H → H	H → L	L → H

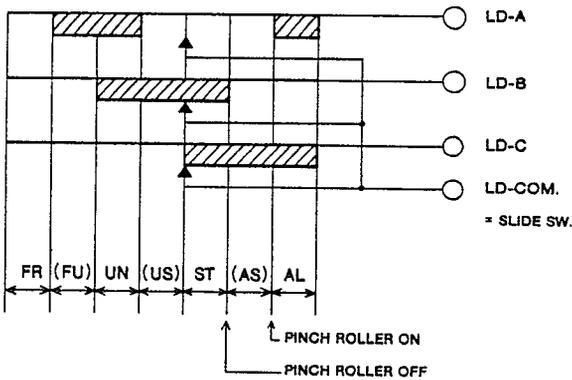

Step 15

\*When SYSTEM CONTROL IC has run away SYSTEM CONTROL IC will not accept any mode. At this time disconnect AC cord to reset the SYSTEM CONTROL IC.

Position of loading switch

LD SW			Symbol	Position
A	B	C		
1	1	1	FR (FR LOADING)	FF. REW
0	1	1	(FU)	
0	0	1	UN (UN-LOADING)	STOP EJECT
1	0	1	(US)	
1	0	0	ST (SHORT STOP)	Loading motor is stopped temporarily at unloading.
1	1	0	(AS)	
0	1	0	AL (AFTER-LOADING)	PLAY RECPAUSE SHORT REW

0:MAKE 1:BREAK  
Break means intermediate position.

Table 2.

# (TV SECTION) DISASSEMBLY INSTRUCTIONS

## 1 HOW TO REMOVE THE WHOLE VIDEO CASSETTE DECK MECHANISM— (Figure 1)

Remove 4 screws (A) on side.(2 screws on each side)

Drawing out the whole video cassette deck.  
Disconnect 4 connectors on back.

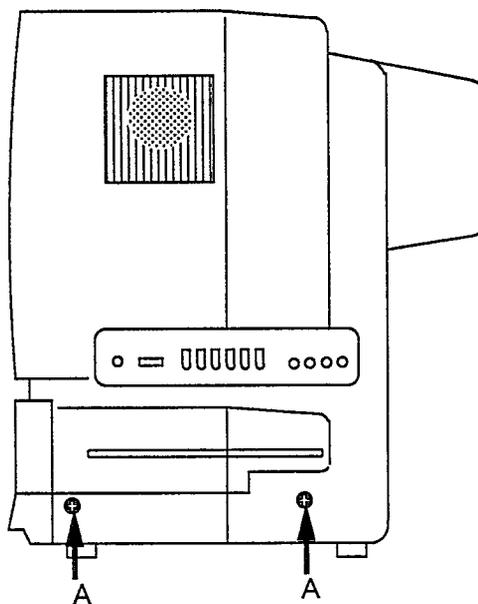

Figure 1

## 2 HOW TO REMOVE REAR BACK CABINET— (Figure 2)

Remove 7 screws (B).

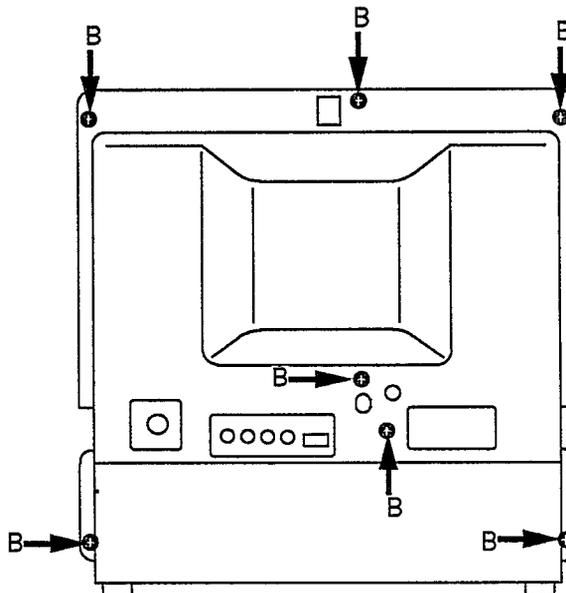

Figure 2

### 3 HOW TO REMOVE TV CHASSIS/MAIN PCB ASS'Y— (Figure 3)

Disconnect related 4 connectors (C), clamp (D), anode cap (E) and CRT PCB (F).

NOTE : Must discharge anode cap before disconnecting it.

Remove 2 screws (G) and draw out the TV chassis/main PCB ass'y.

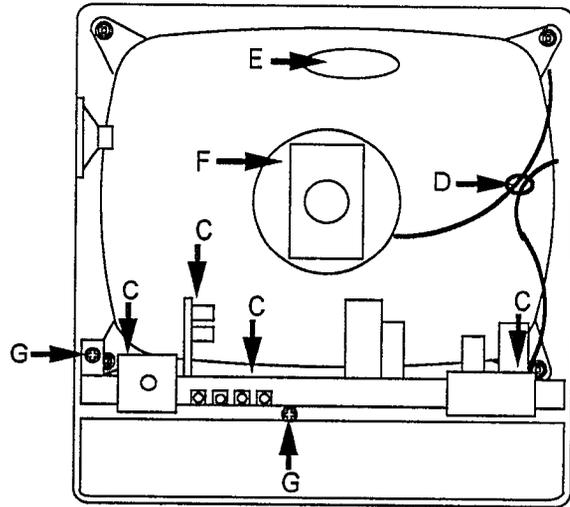

Figure 3

### 4 HOW TO REMOVE SPEAKER— (Figure 4)

Remove glue around the speaker flame and draw out.

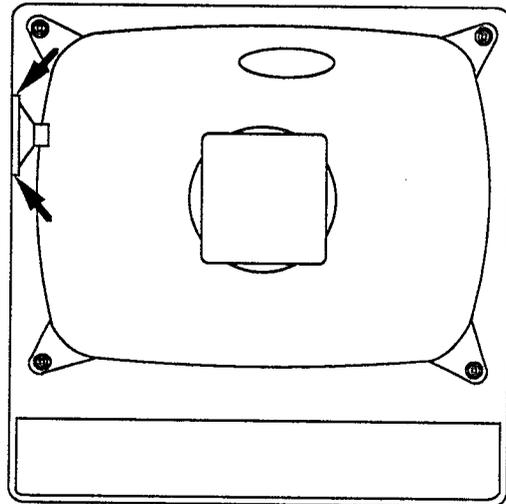

Figure 4

5 HOW TO REMOVE CATHODE RAY TUBE (CRT) – (Figure 5)

Remove 4 nuts (H).

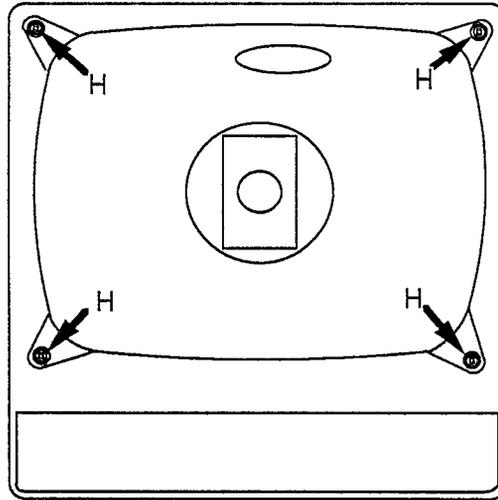

Figure 5

# ELECTRICAL ADJUSTMENT

## 1 FOCUS

1. Set the CONTRAST and BRIGHTNESS control to maximum.
2. Adjust the Focus control of FBT to sharp and clear on display.

## 2 CUT-OFF ADJUSTMENT

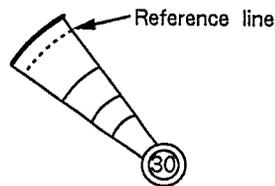

1. Turn the all Low Light controls to  $\frac{1}{2}$  position (VR1702, VR1703, VR1705).
2. Turn the B Drive (VR1701) and R Drive (VR1704) controls to center.
3. Set the SUB BRT control (VR1602) to center position.
4. Turn the SCREEN control (T1402) to fully counterclockwise.
5. Set the SERVICE switch (SW1601) to service position.(display picture become horizontal bar)
6. Slowly turn the SCREEN control to the point where horizontal bar just illuminates.
7. If horizontal bar is red, turn the B LOW-LIGHT control (VR1703) to get magenta.  
If horizontal bar is blue, turn the R LOW-LIGHT control (VR1702) to get magenta.
8. Turn the G LOW-LIGHT control to get white horizontal bar.(3 color to same brightness)
9. Reset the SERVICE switch (SW1601) to NORMAL position.

## 3 V-SIZE

1. Receive the monoscope pattern.
2. Adjust overscan with the VR1401 to 93% of display size.

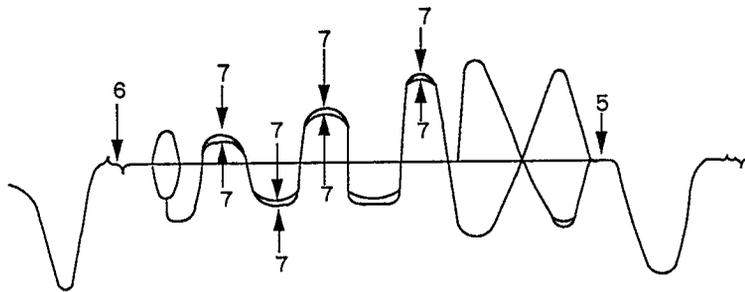

## 4 SUB-BRIGHTNESS

1. Receive the monoscope pattern.
2. Set the CONTRAST control to max and the BRIGHTNESS, COLOR control to fully counterclockwise.
3. Adjust VR1602 to the point where reference line just start illuminate.

## 5 COLOR DEMODURATOR DELAY LINE

1. Receive philips pattern (2ch. 80dB  $\mu$ ) with AFT off position, and set ATT to on position.
2. Turn the COLOR, CONTRAST control to max, BRIGHT control to min.
3. Connect TP12 (B-Y output) and TP11 (GND) to oscilloscope.
4. Connect anode side of D1404 to EXT TRIG terminal of oscilloscope.
5. Adjust the GAIN control (VR1601) to as following drawing.
6. Adjust the PHASE control (VR1603) to as following drawing.
7. Adjust the DELAY control (VR1604) to as following drawing.
8. Repeat above step 5~7 until to get best point of these three.

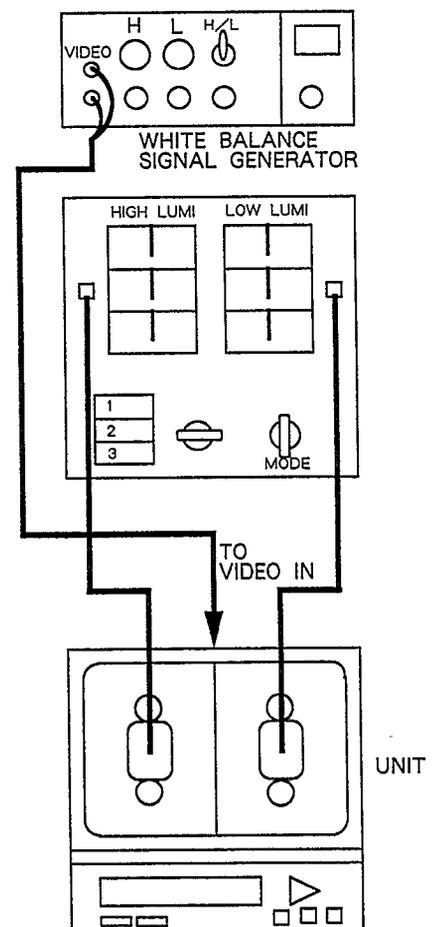

## 6 WHITE BALANCE

### Preparations :

1. Adjustment should be conducted in dark place (shielded sun light)
2. Under european magnetic shield (V : 0.44, H : 0.18)
3. All other adjustments should be done.
4. Module of white balance meter should be memorized as color temperature 6500° K,  $x=312$ ,  $y=322$ .
5. Set MODE SELECT switch of white balancer to ZERO.
6. Lie down the light sensor of white balancer to shut out light.
7. Adjust ZERO ADJ control to center on meter.
8. Connect the white balance meter as following drawing.

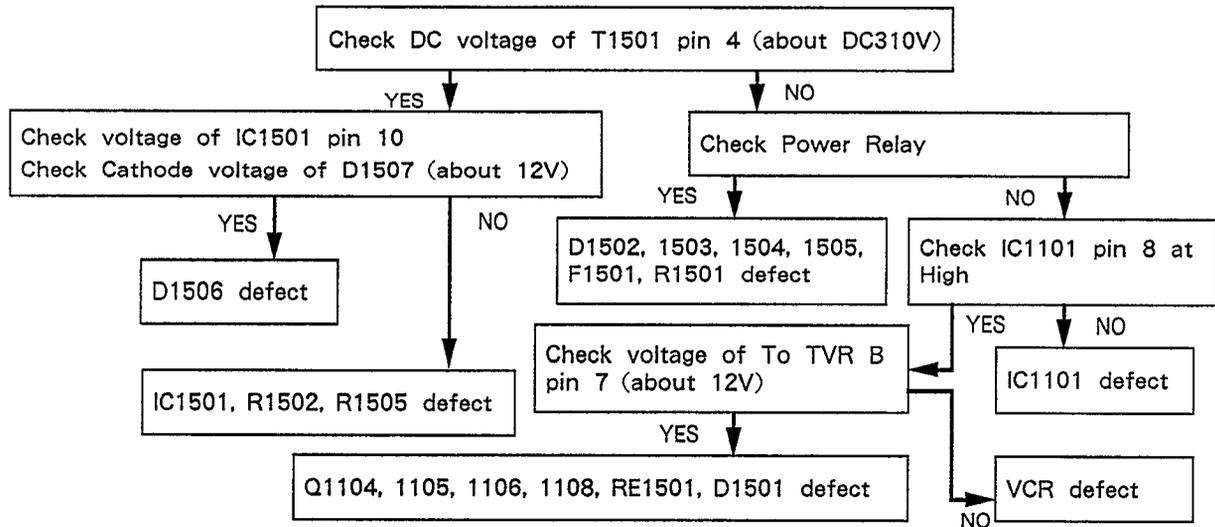

### Adjustment :

1. Set the PHOSPHOR SELECT switch of balancer to as memorized module position.
2. Set MODE SELECT switch of balancer to LOW SENS.
3. Set AUTO/MANUAL switch of signal generator to AUTO.
4. Set MODE SELECT switch of signal generator to H/L.
5. Adjust BRIGHT, CONTRAST control of unit, and HIGH, LOW control of signal generator to center of LOW LUMI and HIGH LUMI meters.
6. Adjust R DRIVE (VR1704) and B DRIVE (VR1701) to center of HIGH LUMI meter.
7. Adjust R CUT-OFF VR (VR1705) and B CUT-OFF VR (VR1702) to center of LOW LUMI meter.
8. Repeat step 6 and 7 until to get center indication on all meters.
9. Repeat step 6 and 7 until to get with-in 2% of meter indication even change MODE SELECT switch to HIGH SENS.

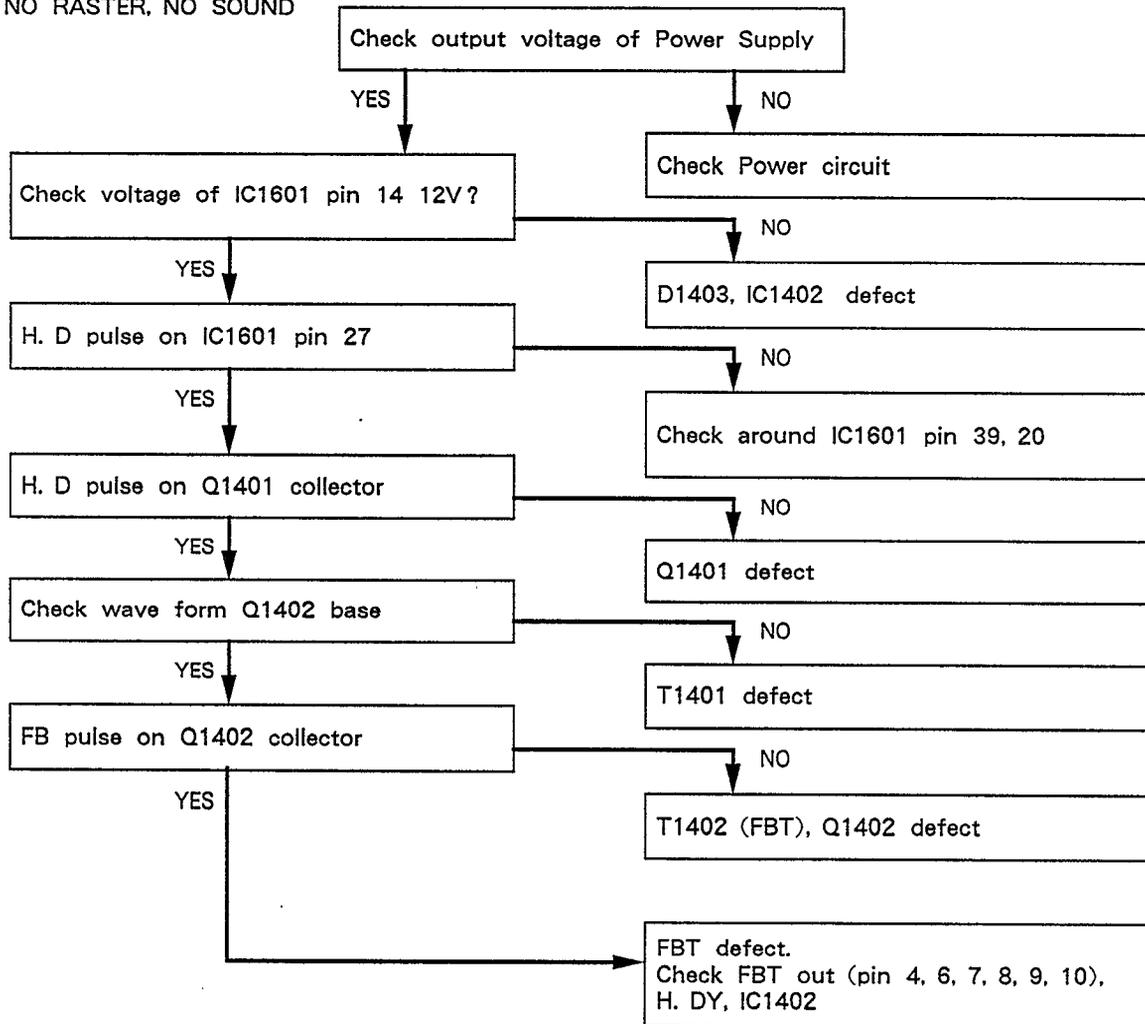

# TROUBLESHOOTING GUIDE

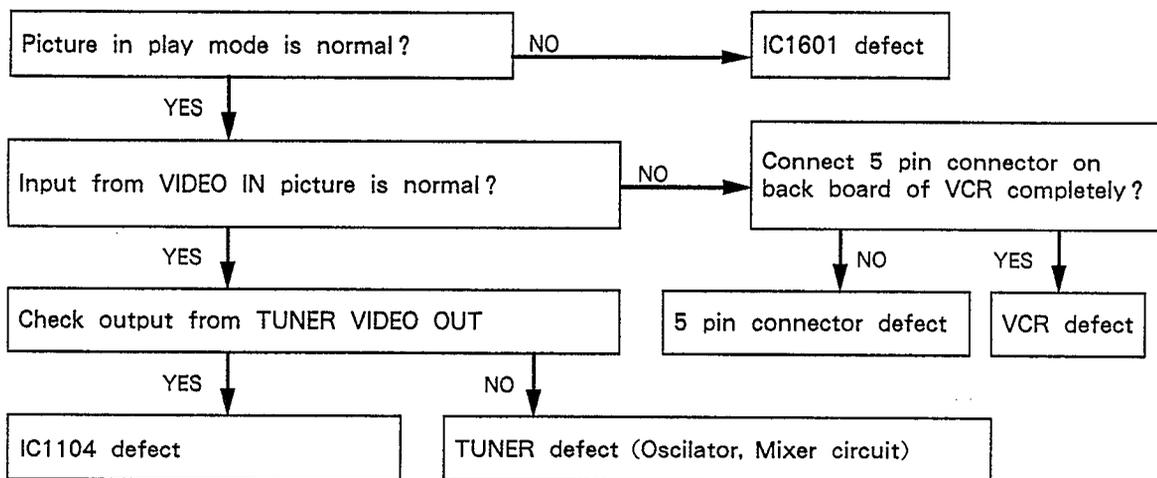

## (1) NO POWER OUTPUT

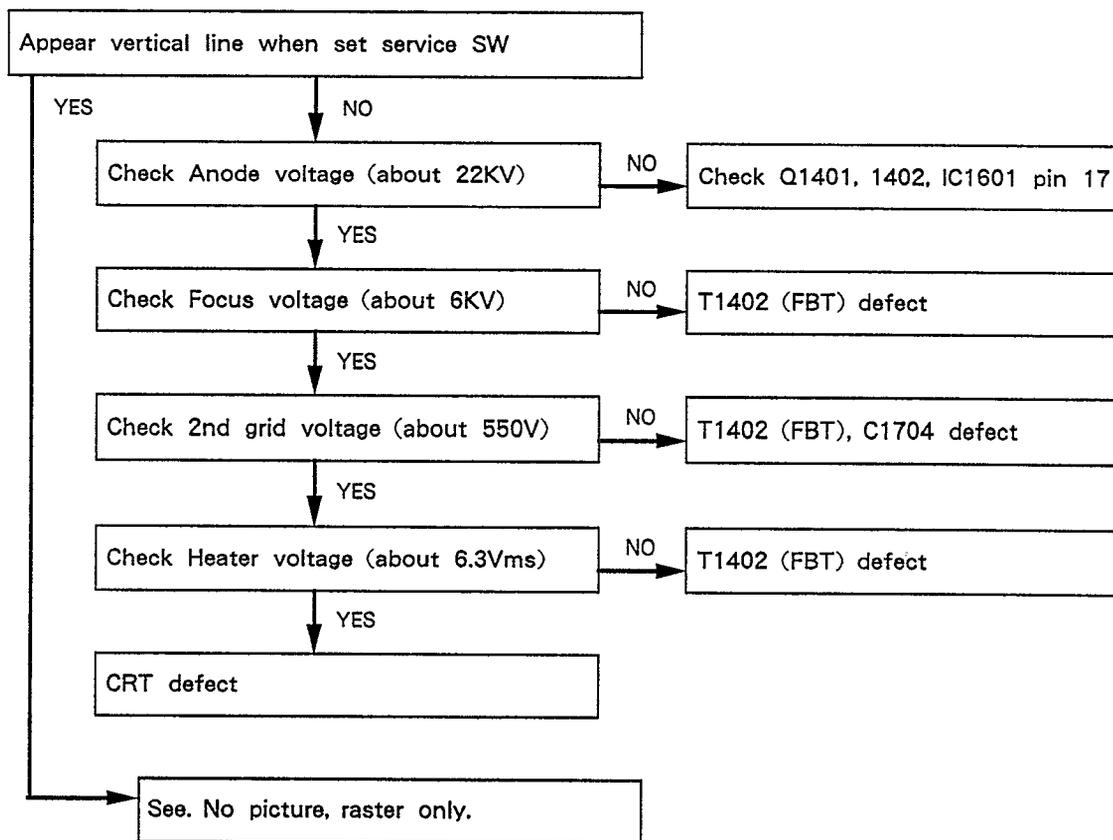

## (2) NO RASTER, NO SOUND

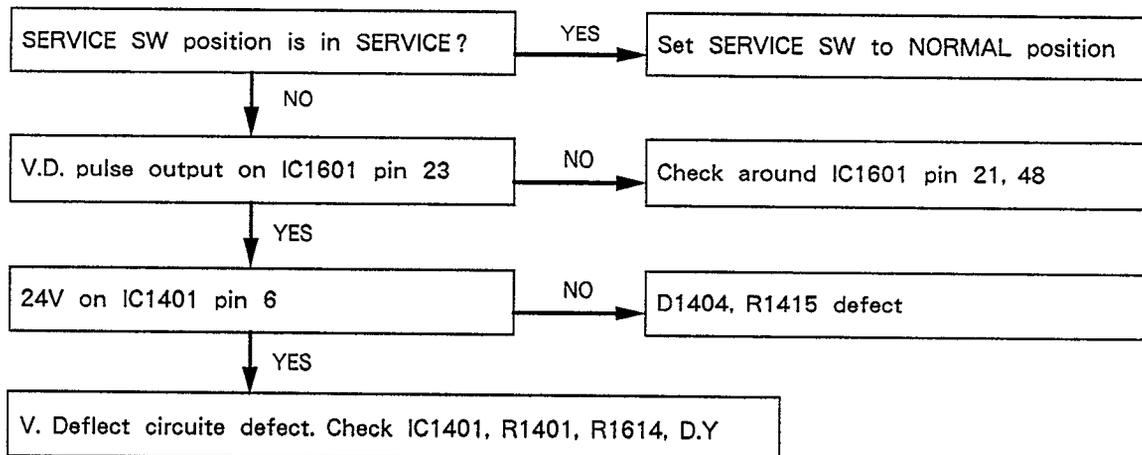

(3) NO PICTURE, RASTER ONLY

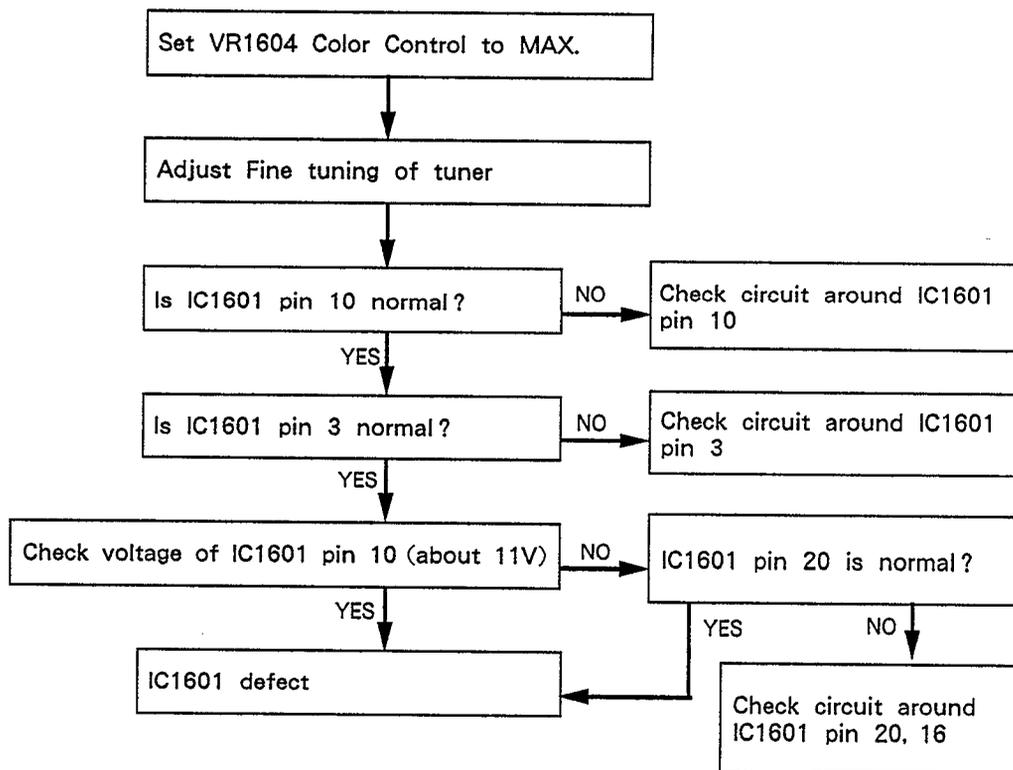

(4) NO RASTER WITH SOUND

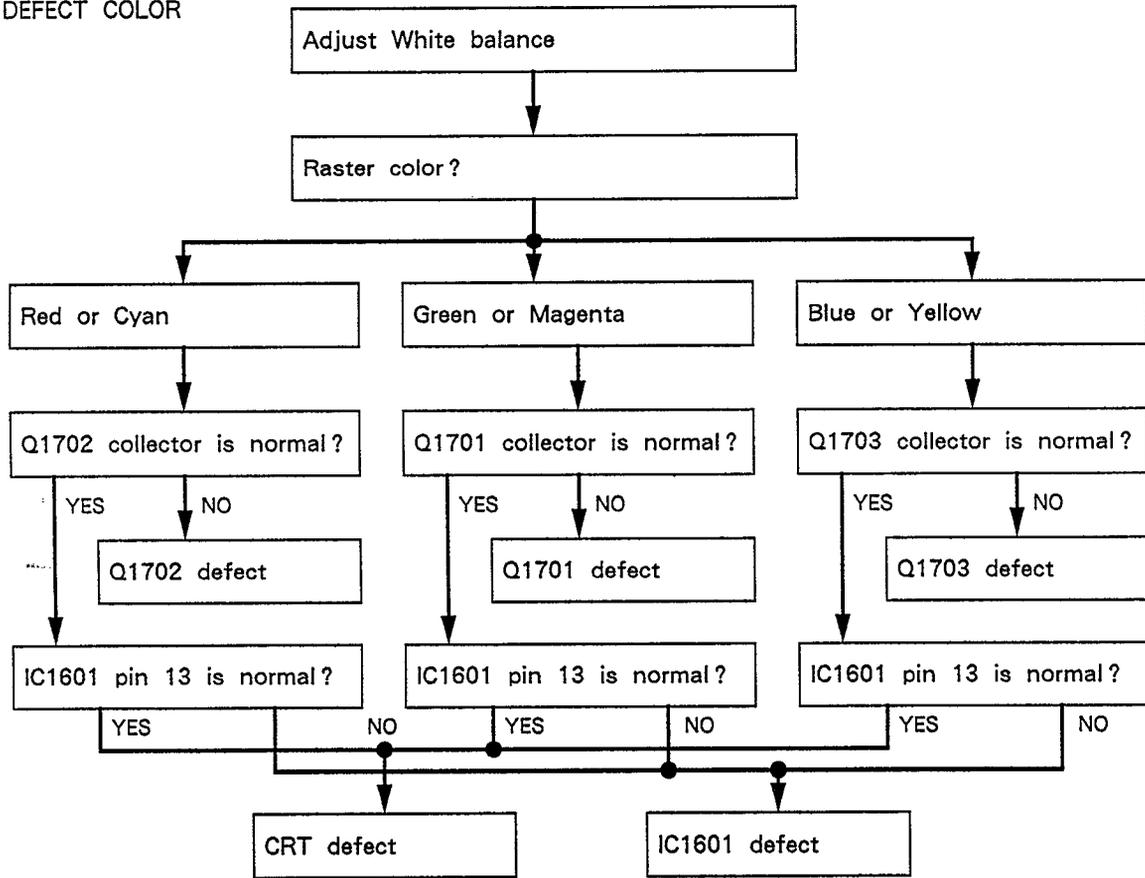

(5) NO V. DEFLECT (ONLY H. LINE)

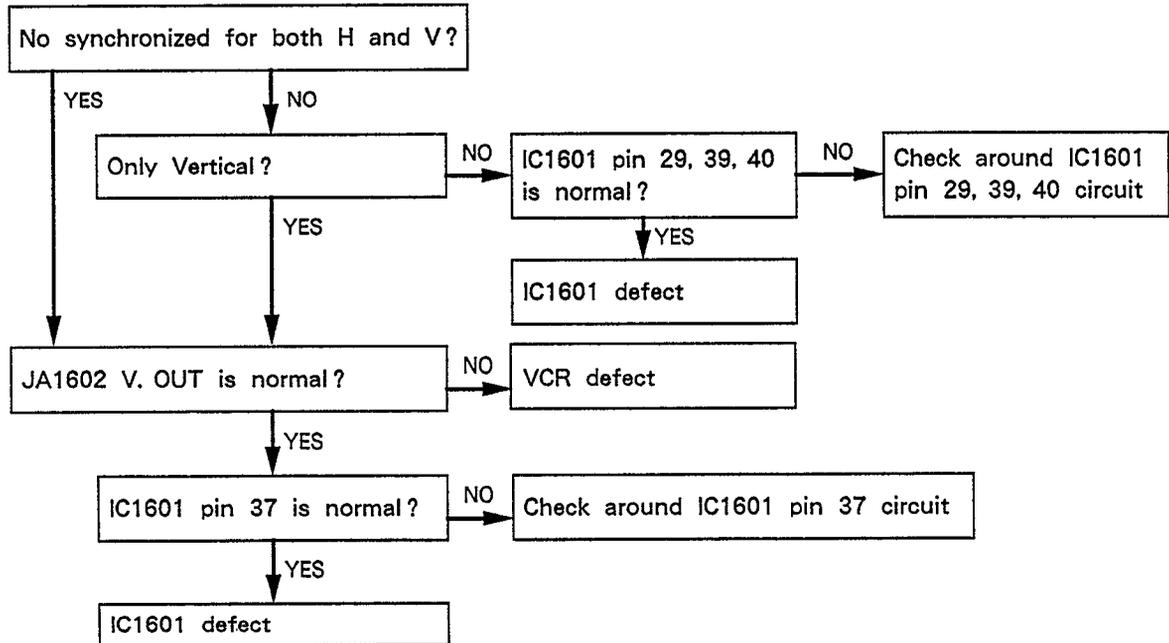

(6) NO COLOR

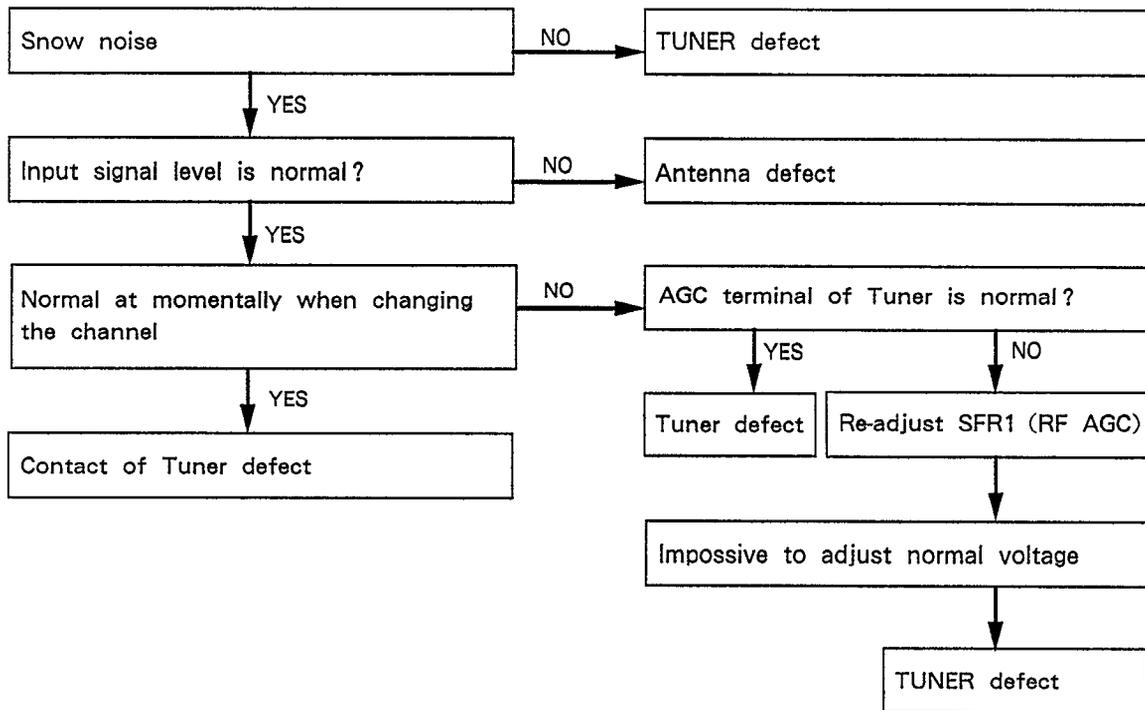

(7) DEFECT COLOR

(8) NO SYNCHRONIZED

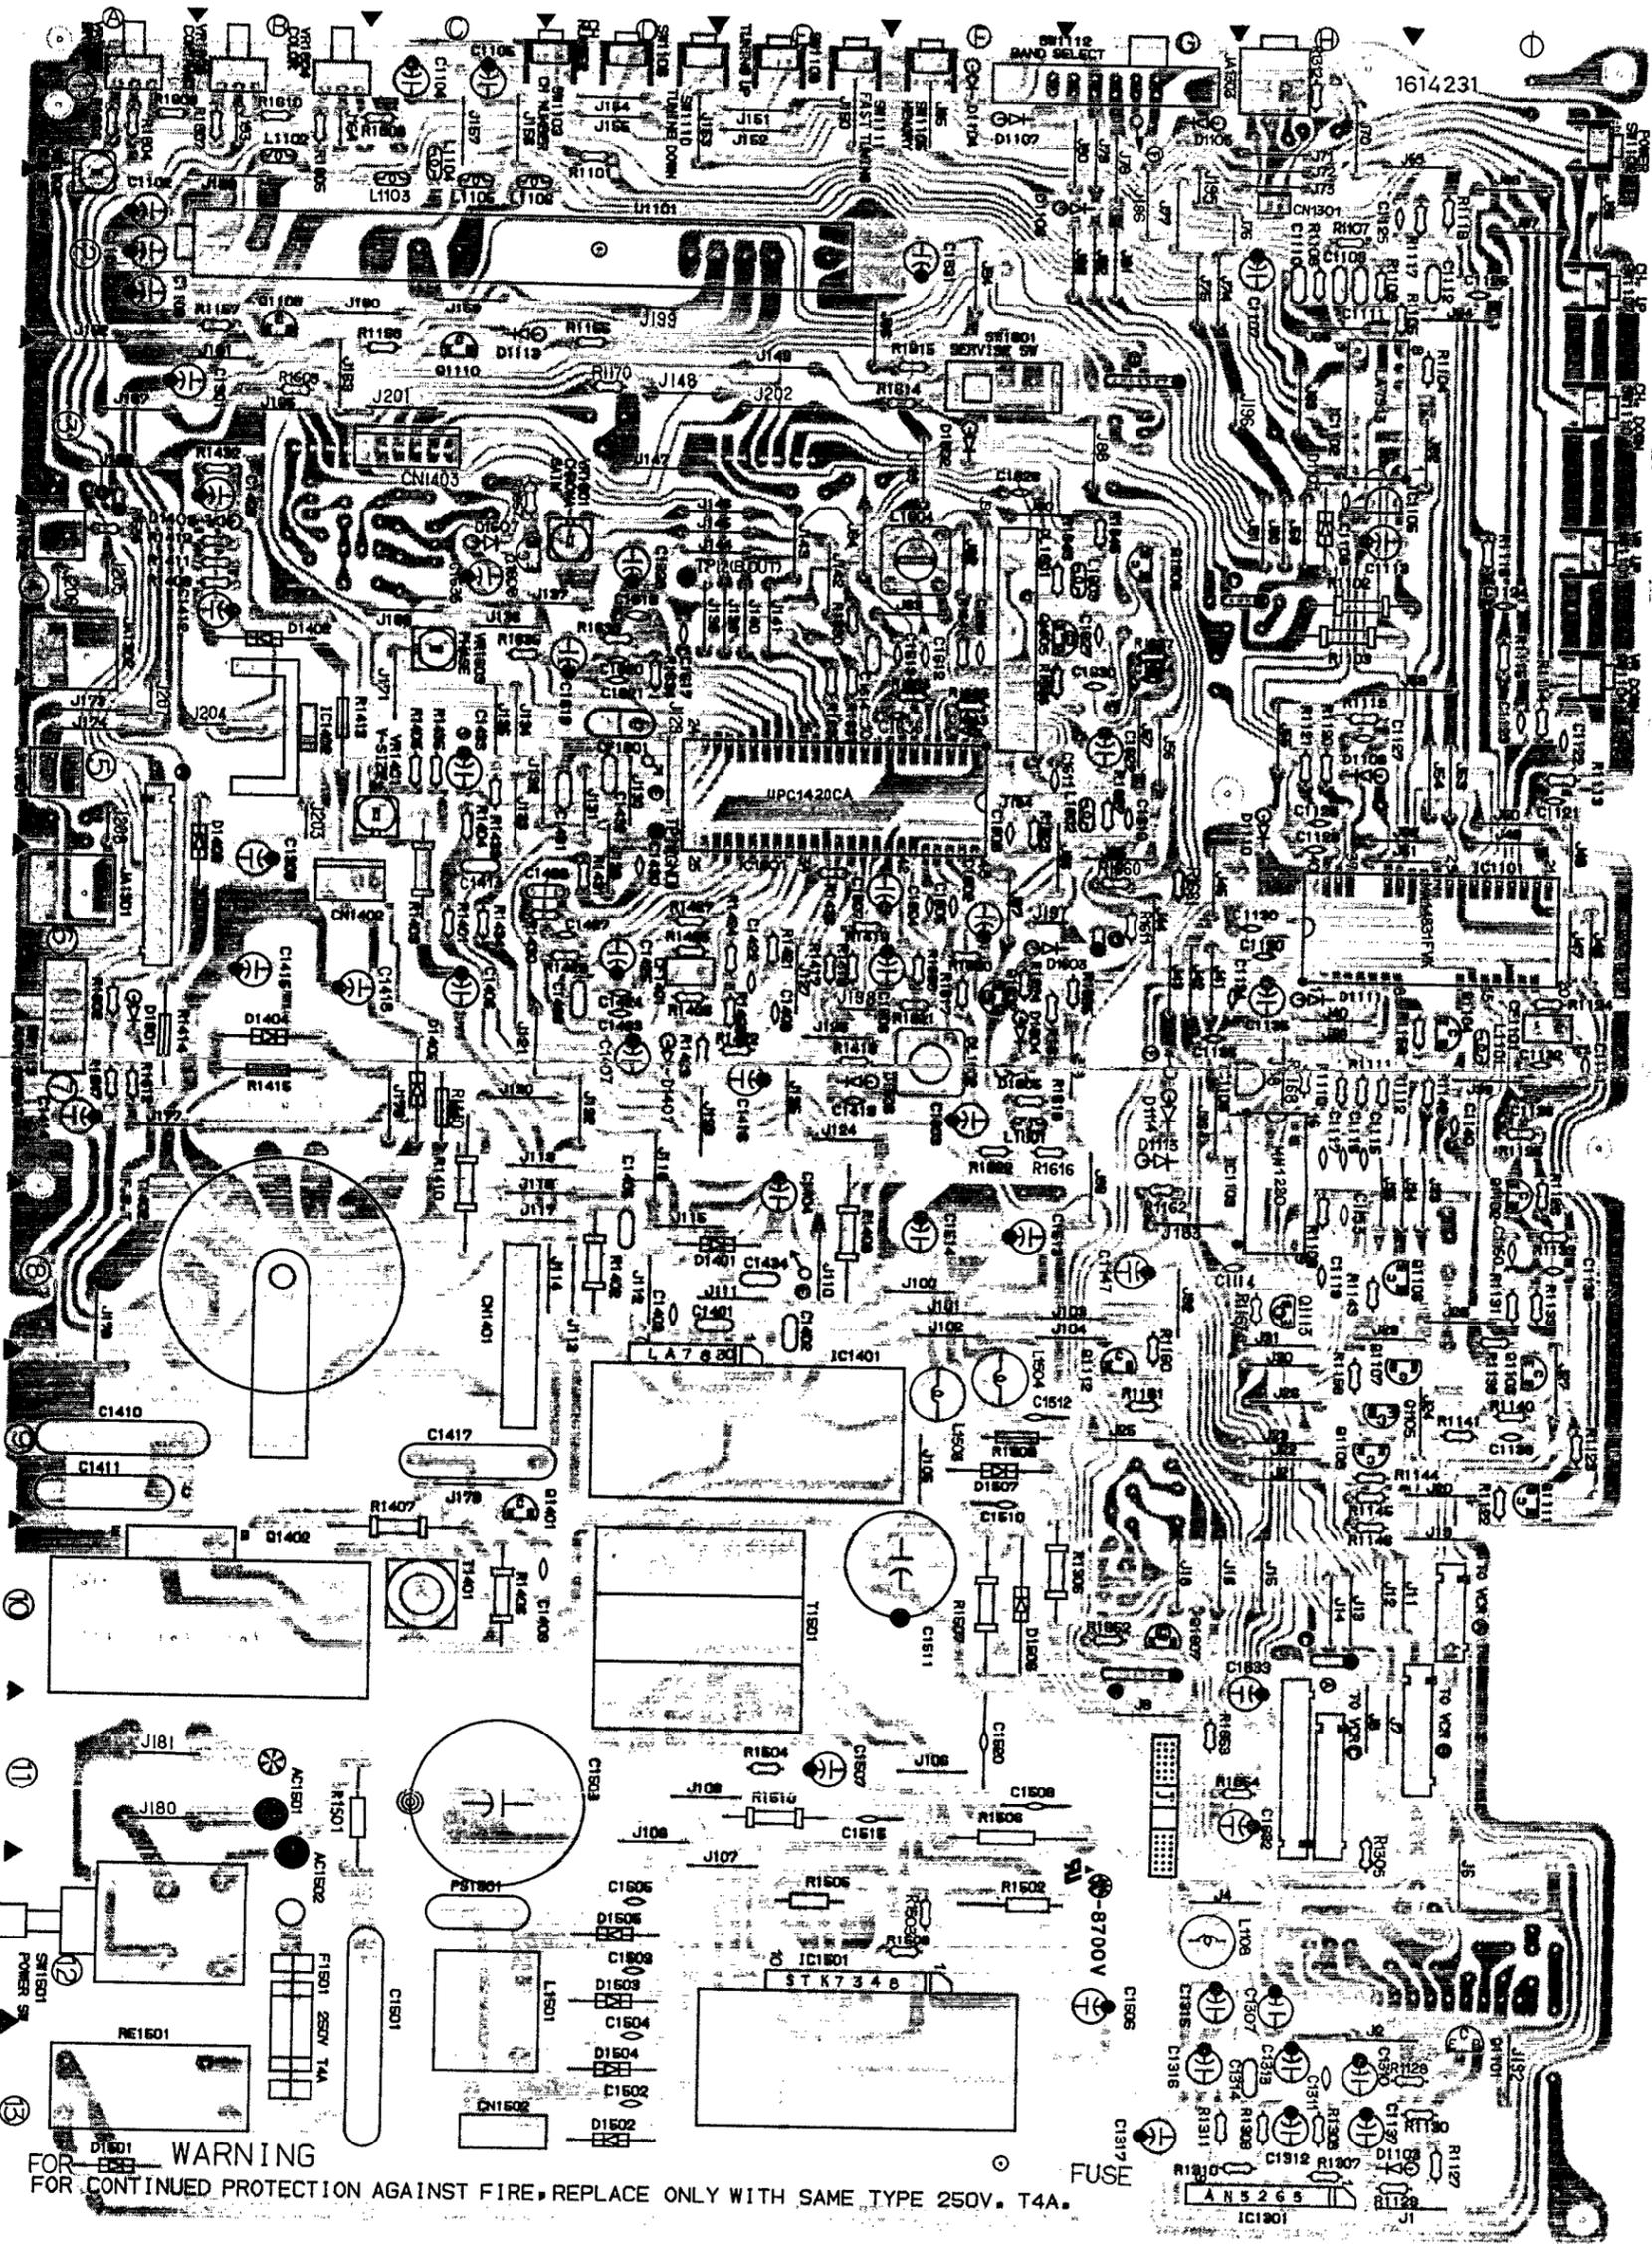

(9) DIMLY PICTURE

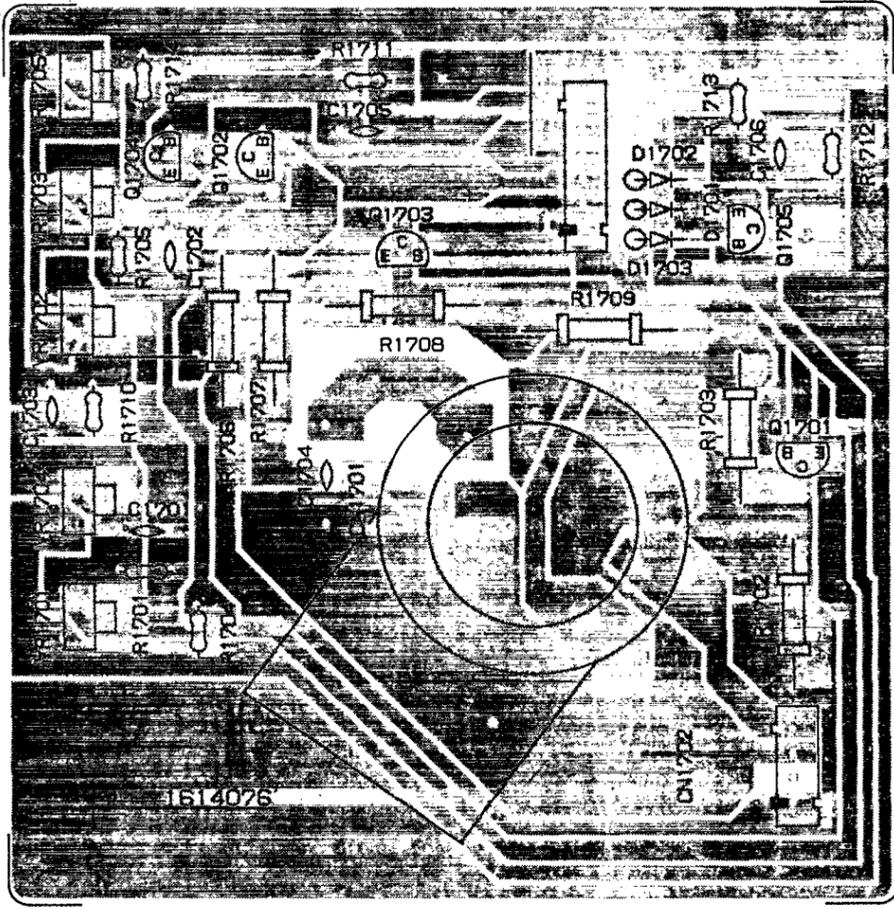

Main PCB (Top View)

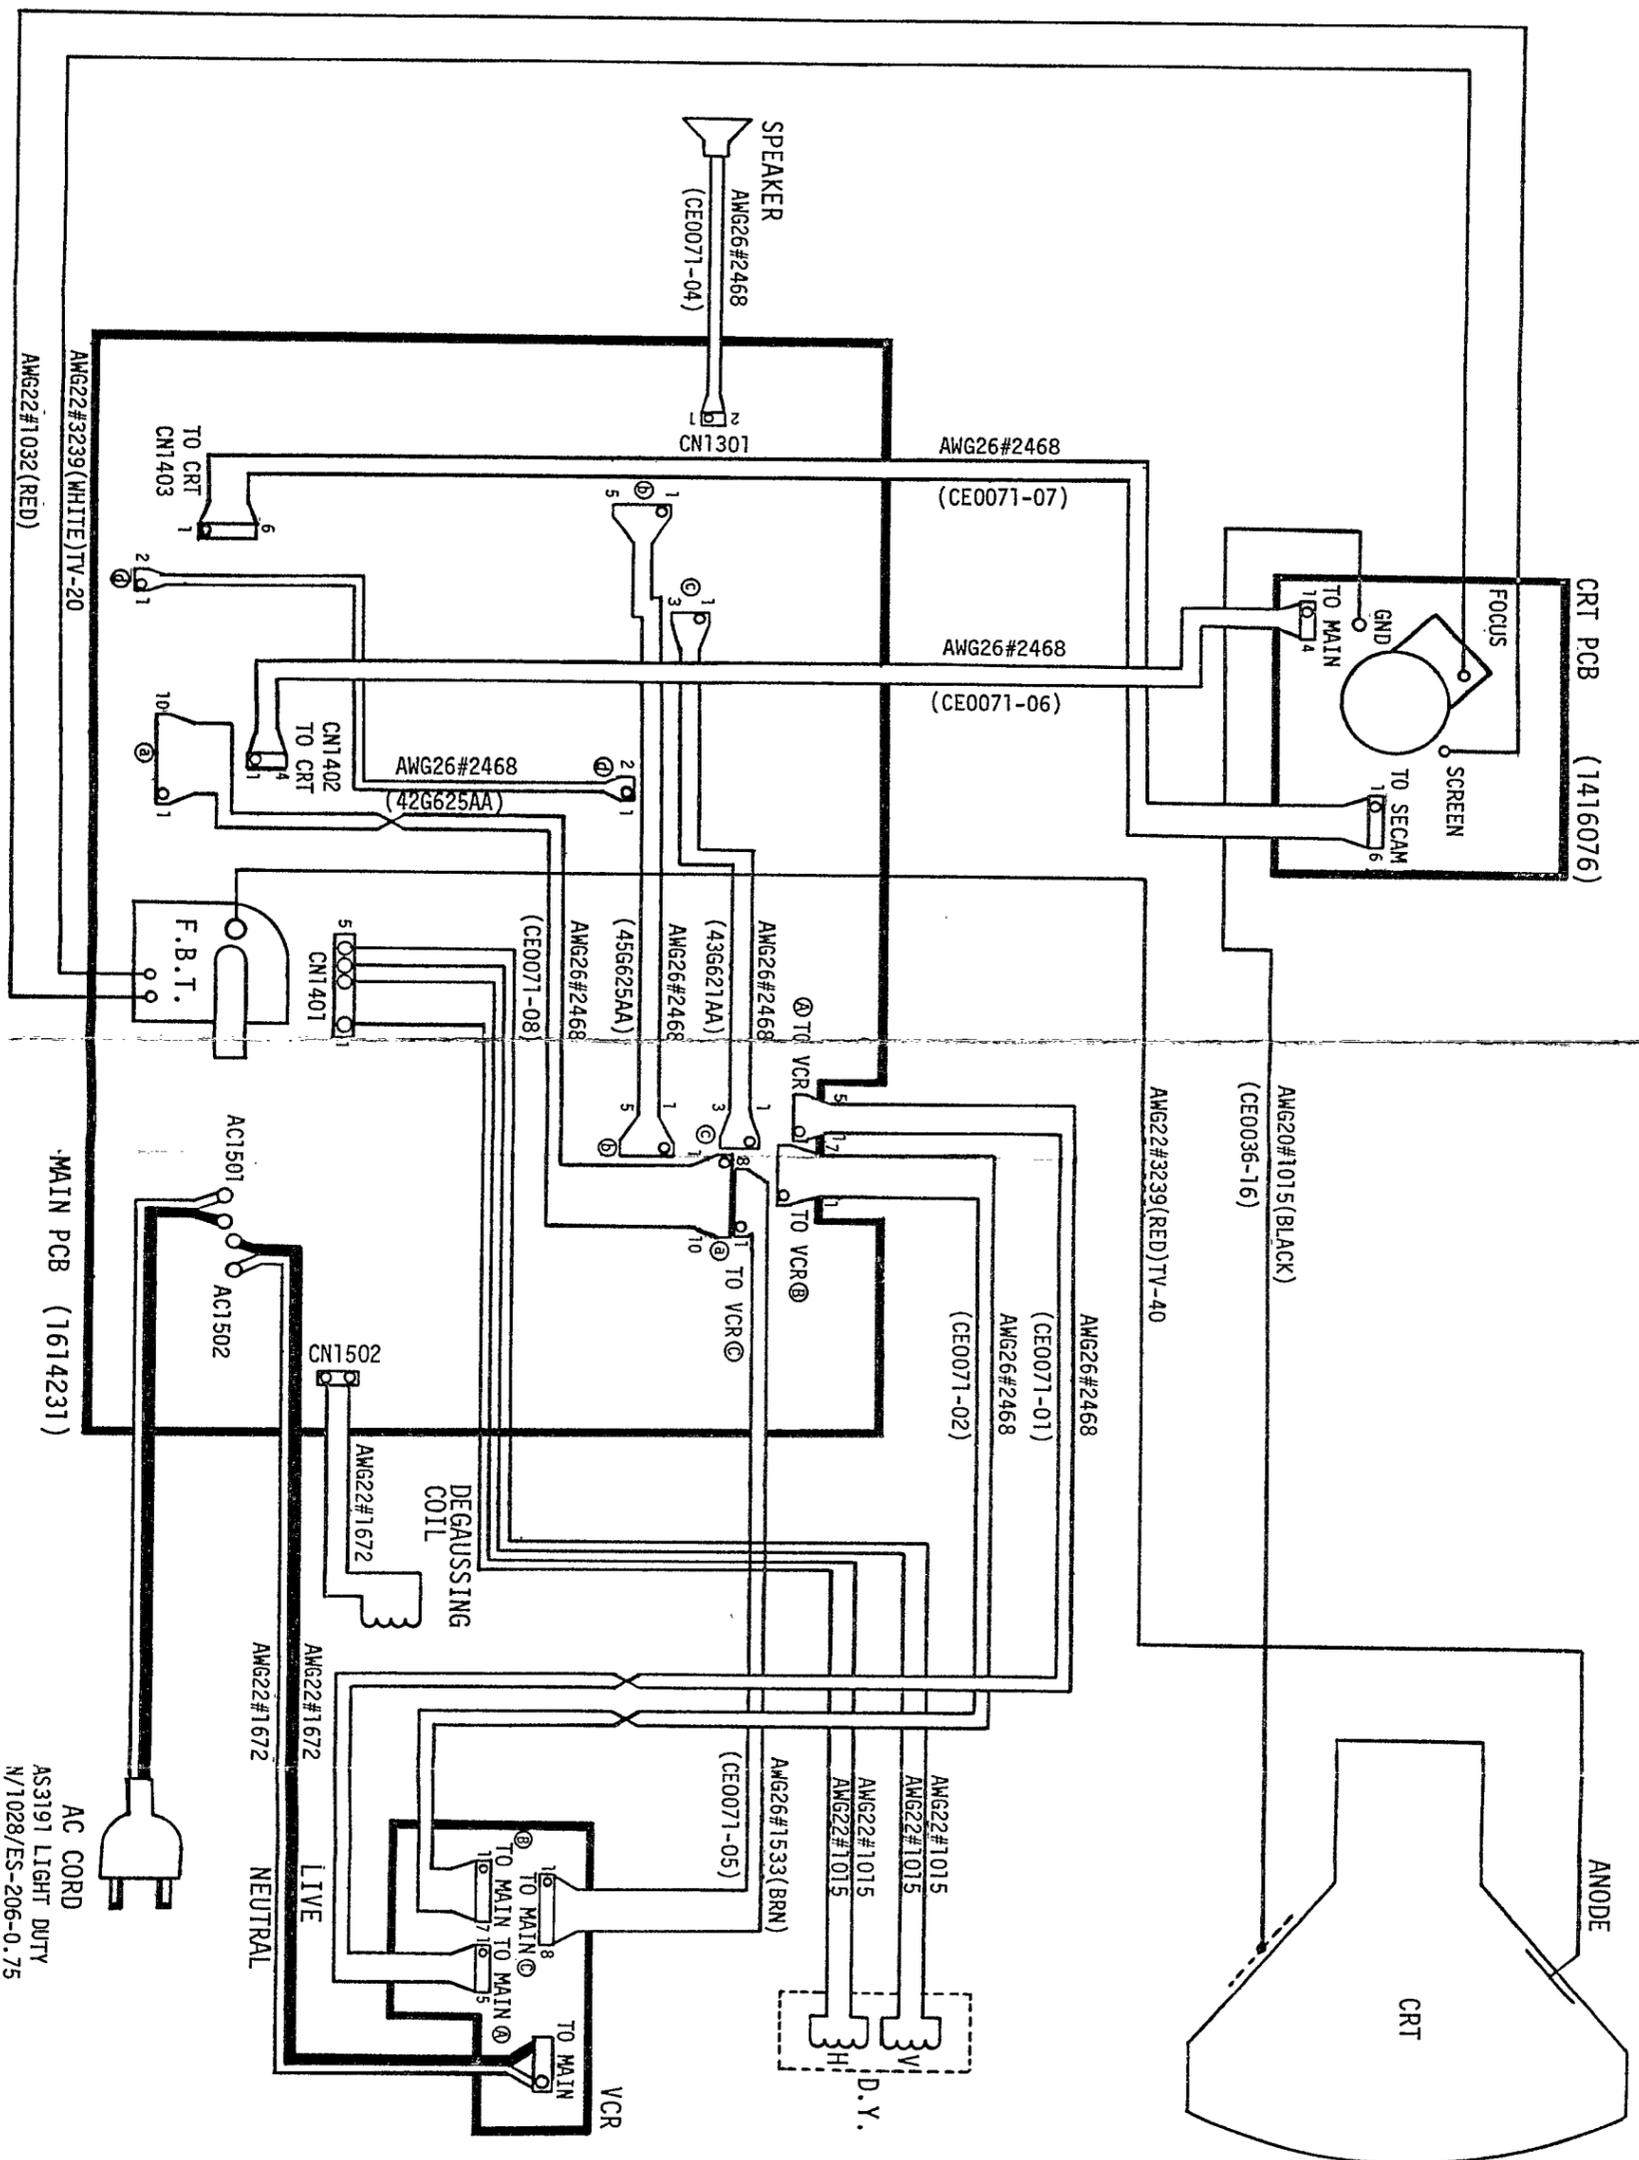

FOR CONTINUED PROTECTION AGAINST FIRE, REPLACE ONLY WITH SAME TYPE 250V. T4A.

369-370	Not Used	
FLYWHEEL		
371	Flywheel Capstan	8000-15-30
372	Flywheel Holder Assembly	8000-15-304
373	Main Belt	8000-15-26
374-375	Not Used	
376	Nylon Washer 3.6X10X0.5	9957-00-00
377	Capstan Metal	8000-15-24
378	Dish S Tapping Screw (For Camera) 2.6X6	9684-00-00
379	Not Used	
380	C Tapping Screw 3X5	9202-00-00
381	Nylon Washer 3.43X5X0.5	9860-00-00
382-391	Not Used	
MOTOR		
392	Capstan Motor Assembly	8000-16-305
393	Plane Belt	8000-16-07
394	Square Belt	8000-16-08
395	Tams Screw 3X4	9105-00-00
396	Relay Pulley (B) Assembly	8000-16-304
397	Polys W Cut 1.6X3.8X3.8	9743-00-00
398	Rumira W 2.1X5X0.5	9920-00-00
398-460	Not Used	
SENSOR		
461	Not Used	
462	Lamp Holder Assembly	8000-18-309
463-466	Not Used	
467	Dew Sensor EYH-S10K	6808-08-01
468	Tams Screw 3X4	9105-00-00
469-649	Not Used	
650	T Loading Motor Assembly (Consists of 651-671)	8000-21-302
	651 Motor Assembly	8000-21-303
	652 TL Motor Bracket (B)	8000-21-27
	653 Worm Gear Assembly	8000-21-304
	654 Mode Switch Assembly	8000-21-305
	655 Tams Screw 2.6X5	9097-00-00
	656 TL Worm Gear Shaft Receiver (A)	8000-21-32
	657 TL Worm Gear Shaft Receiver (B)	8000-21-33
	658 TL Pulley	8000-21-40
	659 TL Belt	8000-21-39
660-662	Not Used	
	663 SW Actuate Angle (B)	8000-21-28
	664 Actuate Angle Collar	8000-21-12
	665 Tams Screw 2X4	9077-00-00
	666 MSW Actuator Semi Assembly	8000-21-501
667	Not Used	
	668 Tams Screw 3X4	9105-00-00
	669 C Tapping Screw 2.6X5	9192-00-00
	670 Polyslider W 2.2X3.8X0.2	9939-00-00
	671 E Ring S1.2	9499-00-00
672-699	Not Used	
700	Front Loading Assembly (Consists of 700-819)	8000-22-323
	701 Motor Bracket Assembly (Consists of 702-717,819)	8000-22-302
	702 Motor Assembly	8000-22-303
	703 FL Motor Base Assembly	8000-22-304
	704 Motor Bracket Semi Assembly	8000-22-501
	705 Worm gear Assembly	8000-22-305
	706 Sensor Base (R) Assembly	8000-22-320
707-709	Not Used	
	710 SW Lever (A)	8000-22-28
	711 SW Lever (B)	8000-22-29
	712 Worm Gear Shaft Receive	8000-22-27
713	Not Used	
	714 Polys W Cut 1.6X3.8X0.3	9743-00-00

# SCHEMATIC DIAGRAM

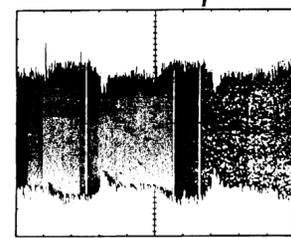

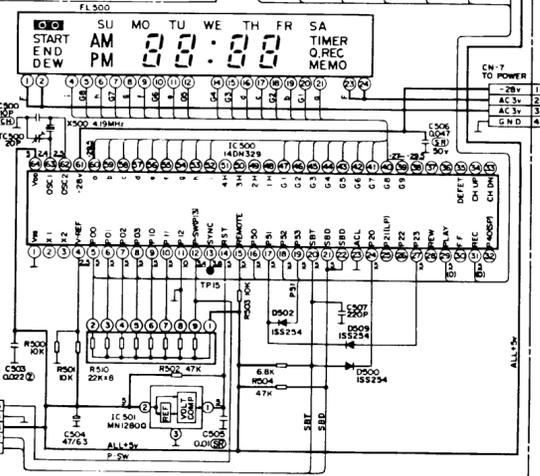

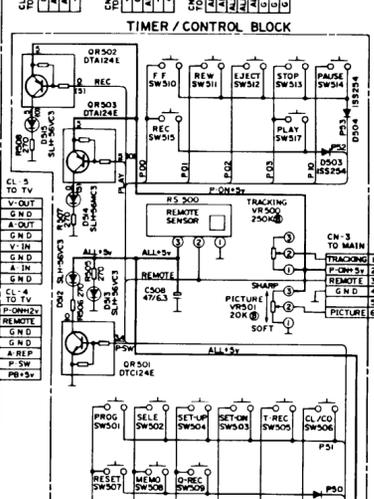

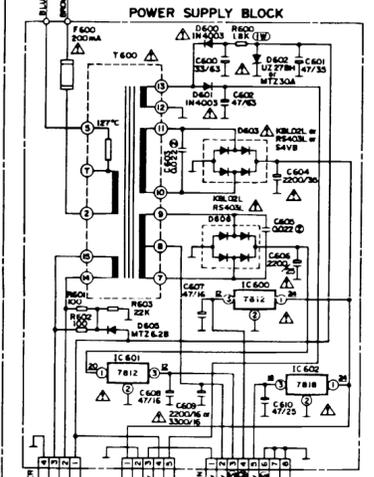

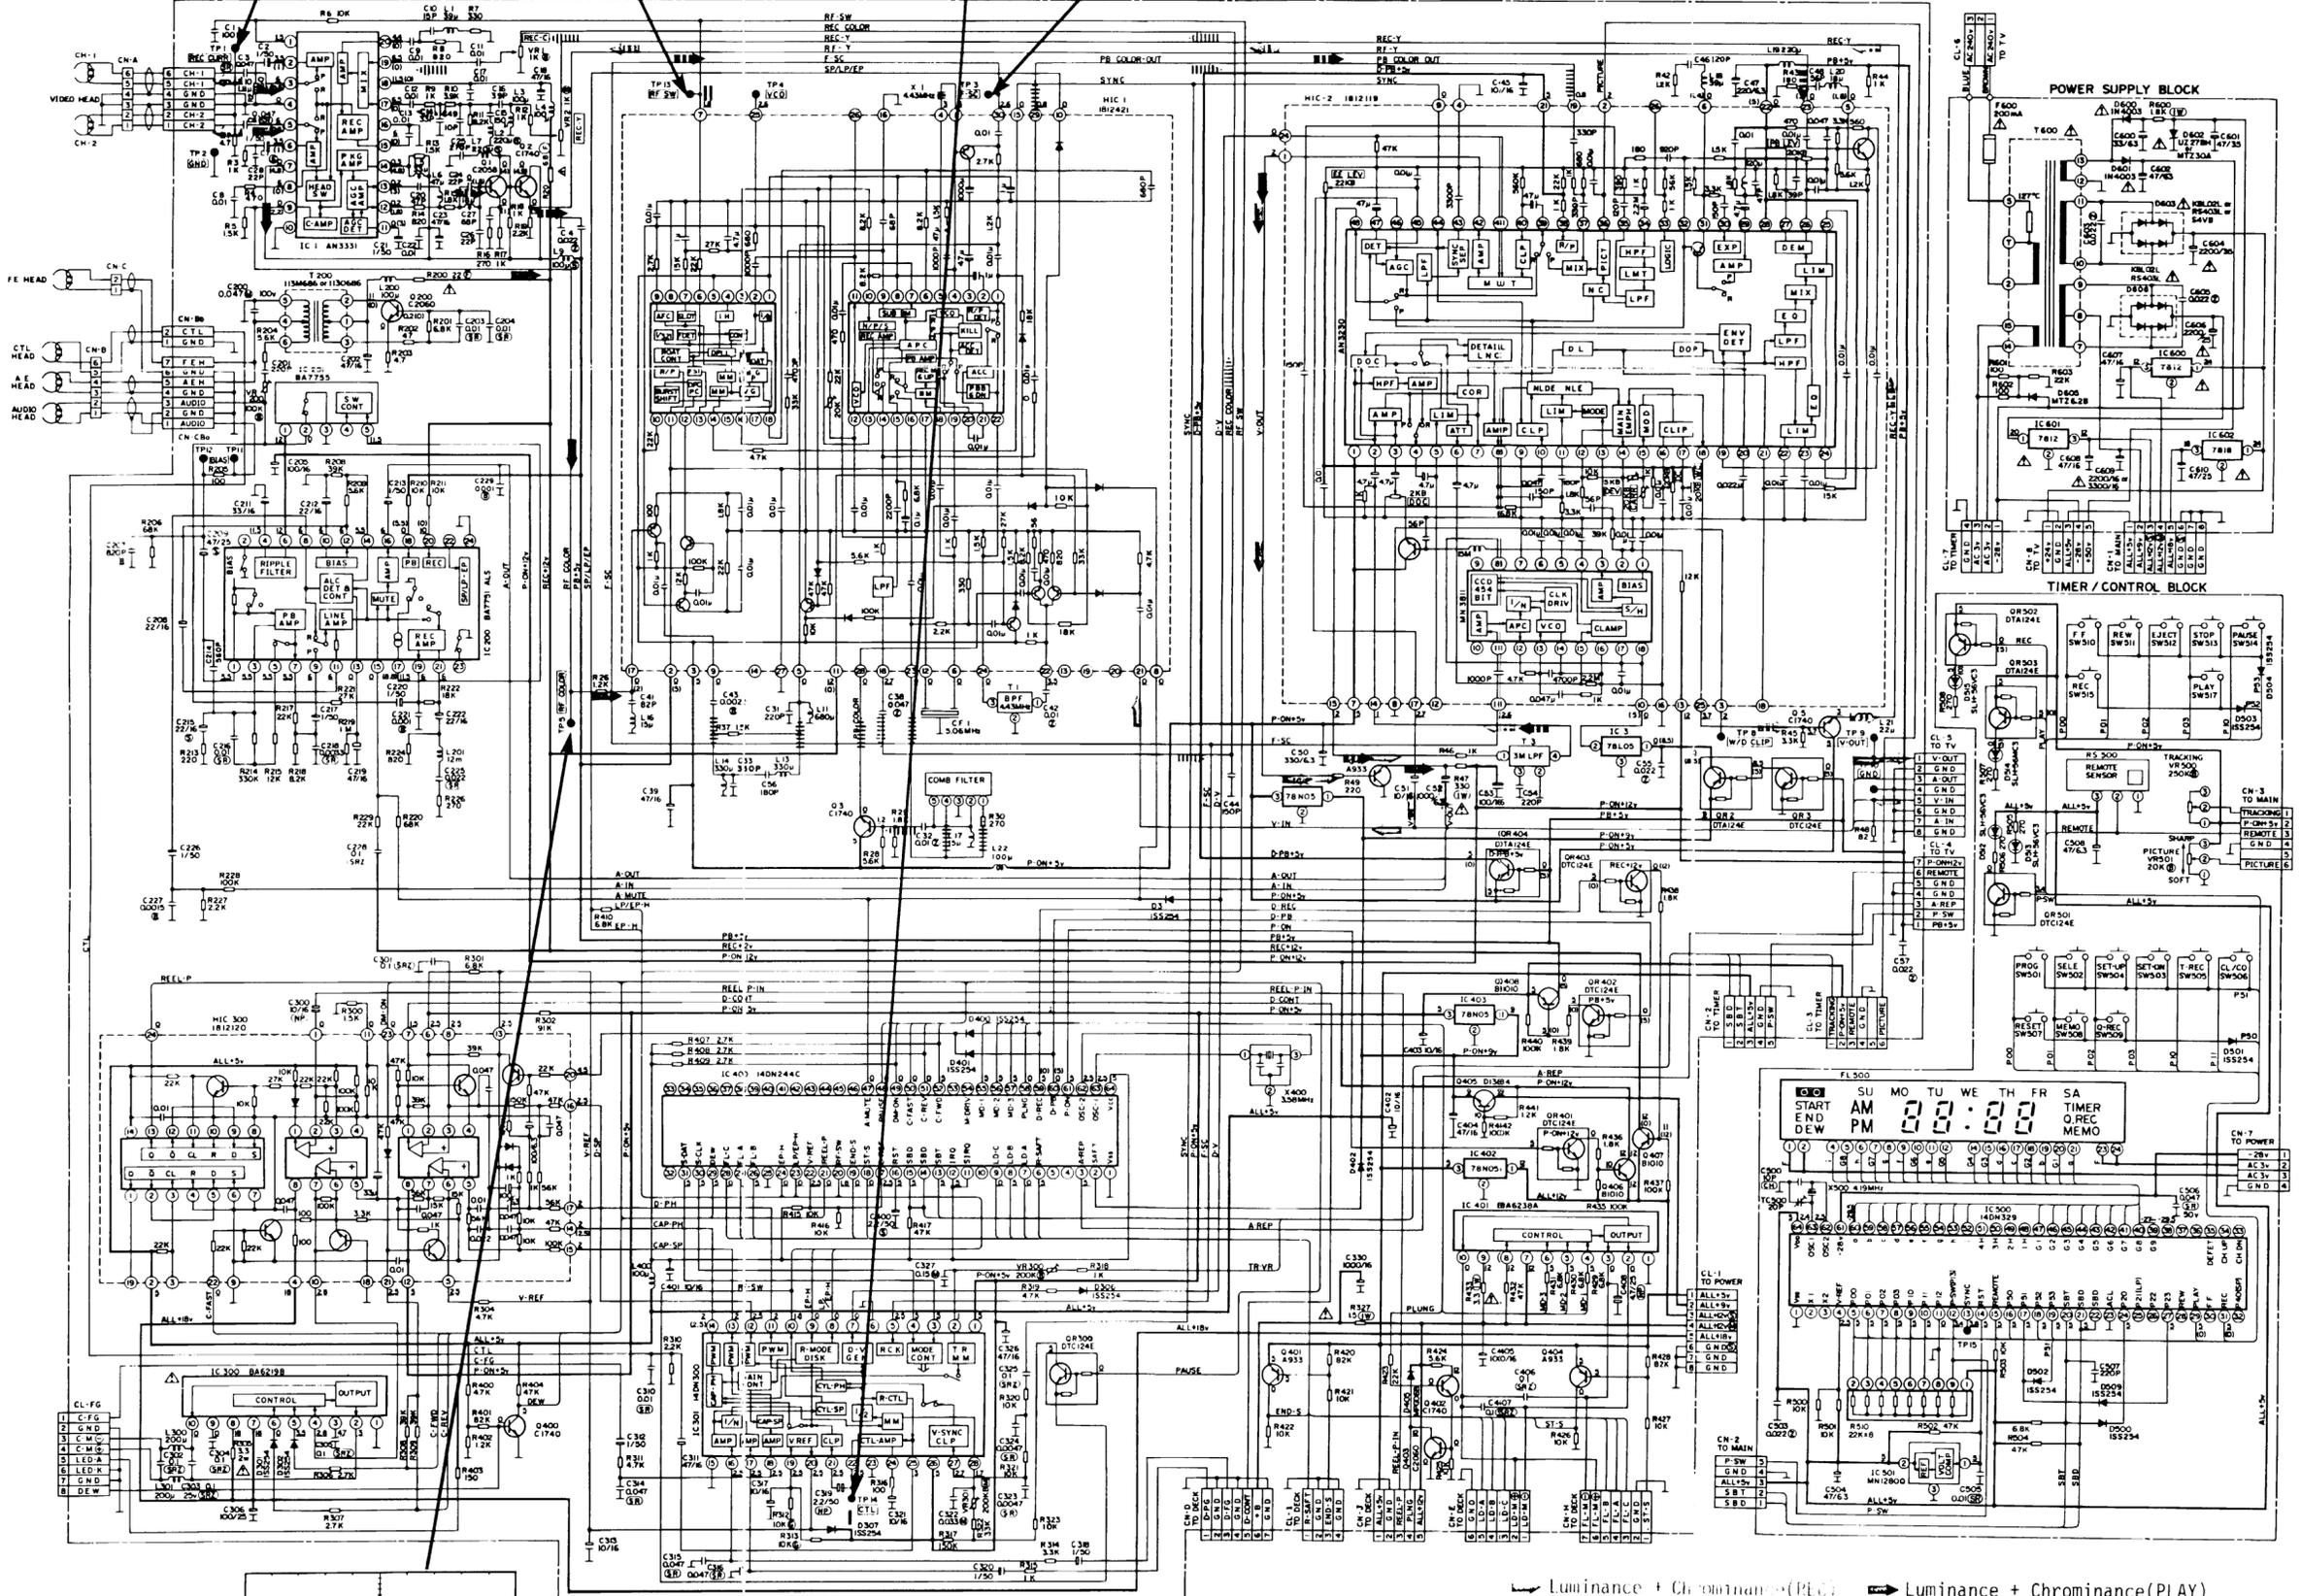

**WARNING:**  
REPLACEMENT PARTS WHICH HAVE SPECIAL SAFETY CHARACTERISTICS ARE IDENTIFIED BY  $\Delta$  SHOWING ON THIS SCHEMATIC DIAGRAM. REPLACE THESE CRITICAL COMPONENTS WITH RECOMMENDED REPLACEMENT PARTS. DON'T DEGRADE THE SAFETY OF THIS SET THROUGH IMPROPER SERVICING. SERVICE PERSONNEL SHOULD MAKE LEAKAGE CURRENT OR RESISTANCE MEASUREMENTS TO DETERMINE THAT EXPOSED PARTS ARE ACCEPTABLY INSULATED FROM THE SUPPLY CIRCUIT BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

1 Div: 2mS 1 Div: 150mV

1 Div: 5mS 1 Div: 2V

1 Div: 2uS 1 Div: 1V

VIDEO / AUDIO / SERVO / SYSCON BLOCK

1 Div: 10mS 1 Div: 150mV

- NOTES:**
1. ALL RESISTANCE VALUES ARE INDICATED IN OHM ( $K = 10^3$ ,  $M = 10^6$ ).
  2. ALL CAPACITANCE VALUES ARE INDICATED IN  $\mu F$  ( $P = 10^{-8}$ ).
  3. VOLTAGES ARE MEASURED WITH SSVN ( $Z > 10K \text{ OHM}$ ) FRONT POINT INDICATED TO CHASSIS GROUND AT NO SIGNAL CONDITION UNLESS OTHERWISE NOTED. (SEE VOLTAGE CHART).
  4. CAPACITOR TYPES A/E (PL) = POLYPROPYLENE, (SC) = SEMI-CONDUCTIVE, (M) = MYLAR, OTHERS ARE CERAMIC.

**NOTE:** All voltages are DC measured with a SSVN. The DC voltage measured at E-E mode.

(  $\square$  ) : at record mode.  
(  $\square$  ) : at playback mode.  
(  $\text{P}$  ) : Fusing resistor.
