## Specifications

<b>Recording/playback system</b>	<b>Channel coverage</b>	<b>Audio frequency response</b>
Video: Rotary 2 heads helical scanning	L (VHF low) 0 – 5	200 Hz – 8 kHz
Audio: Fixed head	H (VHF high) 5A – 11	<b>Audio S/N</b>
	U (UHF) 21 – 69	41 dB (nominal)
<b>Video signal</b>	<b>RF output</b>	<b>Operating temperature</b>
PAL B/G color signal 625 lines, 50 fields	Low (φ) High (I)	5°C – 40°C
<b>Recording/playback time</b>	<b>RF output level</b>	<b>Power requirements</b>
4 hours max. with E-240 tape, standard speed	74 dB	240 V AC, 50 Hz
<b>Fast forward/rewind time</b>	<b>Video input</b>	<b>Power consumption</b>
Less than 300 sec., with E-180 tape	0.5 – 2.0 Vp-p, 75 ohms unbalanced	26 watts
<b>Usable cassette</b>	<b>Video output</b>	<b>Dimensions</b>
VHS video cassette	1.0 Vp-p, 75 ohms unbalanced	380 (W) x 96 (H) x 328 (D) mm
<b>Tape width</b>	<b>Horizontal resolution</b>	<b>Weight</b>
12.65 mm	240 lines (nominal)	Approx. 5.5 kg
<b>Tape speed</b>	<b>Video S/N (luminance)</b>	<b>Accessories</b>
Standard speed, 23.39 mm/sec.	43 dB (nominal)	Remote controller (1) AC power cord (1) Antenna cable (1) Batteries (2)
<b>Timer display</b>	<b>Audio input</b>	
24-hour cycle, day, hour, minute, digital fluorescent display	–10 dBs (nominal)	
<b>Timer recording</b>	<b>Audio output</b>	Design and specifications are subject to change without notice for the purpose of performance improvement.
7 programs within 2 weeks 1 program for weekly recording	–8 dBs, 2.2 k ohms	

## STANDARD MAINTENANCE

### 1. SERVICE SCHEDULE OF COMPONENT

Ref. No.	Parts Name	Periodic Service Schedule			
		1000 h	2000 h	3000 h	4000 h
2-2	UPPER DRUM	○	●	○	●
4-6	PINCH ROLLER A		●		●
3-32	CAPSTAN MOTOR ASSY		●		●
5-27	CLUTCH ASSY		●		●
4-46	LM ASSY			●	
6-22	MAIN BELT		●		●
3-5	BT BAND ASSY		●		●
5-29	DRIVE BELT		●		●
4-41	BRAKE SHOE		●		●
6-1	LOADING BELT		●		●
5-26	FL BELT		●		●
2-5	DRUM EARTH			●	
4-21	ACE HEAD HV225211			●	
3-25	REEL ASSY			●	
4-50	FULL ERASE HEAD			●	

NOTE :

1. Clean all parts for the tape transport.  
Upper Drum with video head/Pinch Roller  
A/ACE Head/Full Erase Head

2. After cleaning up the parts, perform all DECK ADJUSTMENT.

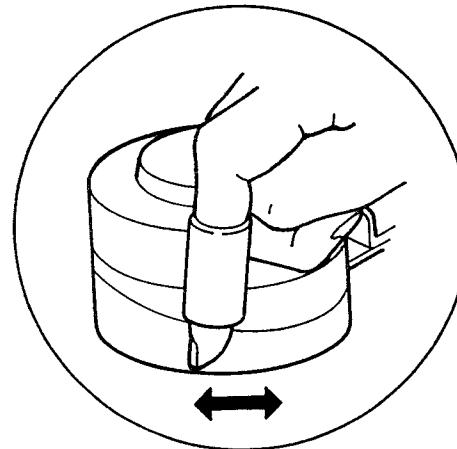

Fig.-1

### 2. CLEANING

#### 1. Cleaning of "Video Head" (See Figure - 1)

Head cleaning by using a chamois skin.

- Procedure -

- 1) Remove the "Cabinet, Steel".
- 2) Put on a glove (thin type) to avoid touching the "Upper Drum" and "Lower Drum" with bare hand.
- 3) Put a few drops of alcohol on the chamois skin, and by slightly placing it against the "Head Tip", allow the "Upper Drum" to turn the right and left.

- Remark -

- 1) The video head is of very hard material, but since it is very thin, avoid cleaning it vertically.
- 2) Wait for the cleaned part to dry out, before operating the unit.
- 3) Do not reuse stained chamois skin.

#### 2. Cleaning of "ACE Head" (See Figure - 2)

Head cleaning by using a chamois skin.

- Procedure -

- 1) Remove the "Cabinet, Steel".
- 2) Put a few drops of alcohol on the chamois skin, clean up the "Audio Control Head", being careful not to damage the "Upper Drum" and other tape running parts.

- Remark -

- 1) Avoid cleaning "ACE Head" vertically.
- 2) Wait for the cleaned part to dry well, before operating the unit.

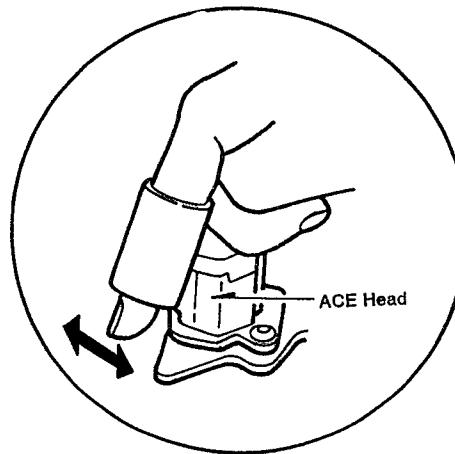

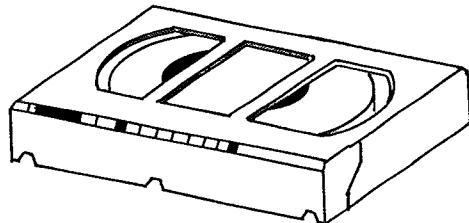

Fig.-2

## SERVICE JIG AND TOOLS

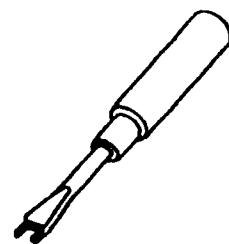

### 1.SERVICE JIG AND TOOLS

Ref. No.	Name	Adjustment
J-1	Torque Meter (FSJ-VHT-063)	Back Tension
J-2	Special Driver (SMALL)	Tape Running Position, Envelope Wave Form
J-3	Special Driver(LARGE)	X Value
J-4	Mirror	Tape Transportation Check
J-5	Alignment Tape (TTV-P2)	X Value, Envelope Wave Form, ACE Head Azimuth
J-6	Alignment Tape (TTV-P1)	ACE Head Height / ACE Head Tilt
J-7	Box Driver M3	Tape Running Position, X Value, Envelope Wave Form
J-8	EXT. PCB. KIT (A) [Parts No. 09-054-012-010]	HA (For repair of circuit board)

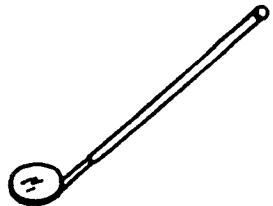

J-1, J-5, J-6

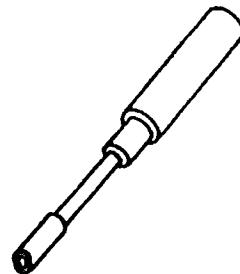

J-2, J-3

J-4

J-7

## 2.HOW TO ASSEMBLE THE JIGS

### 1. Assembling the J - 8 (See Figure - 1)

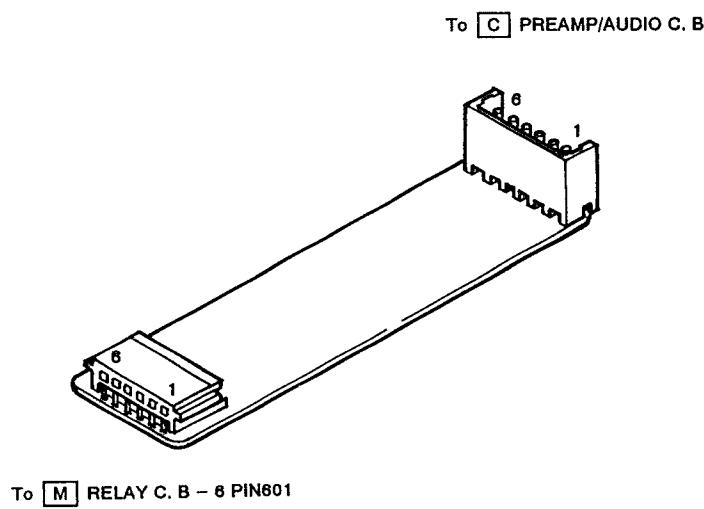

Fig.-1

Place the circuit board with the solder side down as shown in the figure above and assemble the connectors, taking care of their directions.

### 2. Using the J - 8 (See Figure - 1)

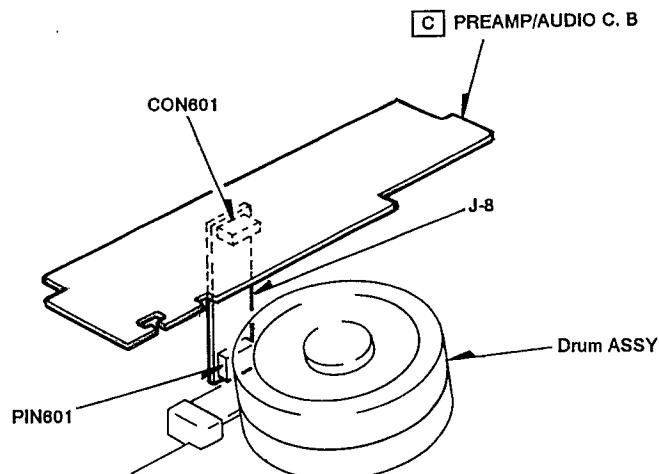

Fig.-1

Use this jig when servicing the "Preamp/Audio C. B".

## DISASSEMBLY INSTRUCTIONS

### 1. "Cabinet Front ASSY" Removal (See Figure - 1)

- 1) Remove 4 screws (Ⓐ) holding the "Cabinet, Steel".
- 2) Remove 8 screws (Ⓑ) holding the "Plate, Bottom".
- 3) Remove screw (Ⓒ) and releases 5 hooks to remove the "Cabinet Front ASSY" in the direction of the arrow.

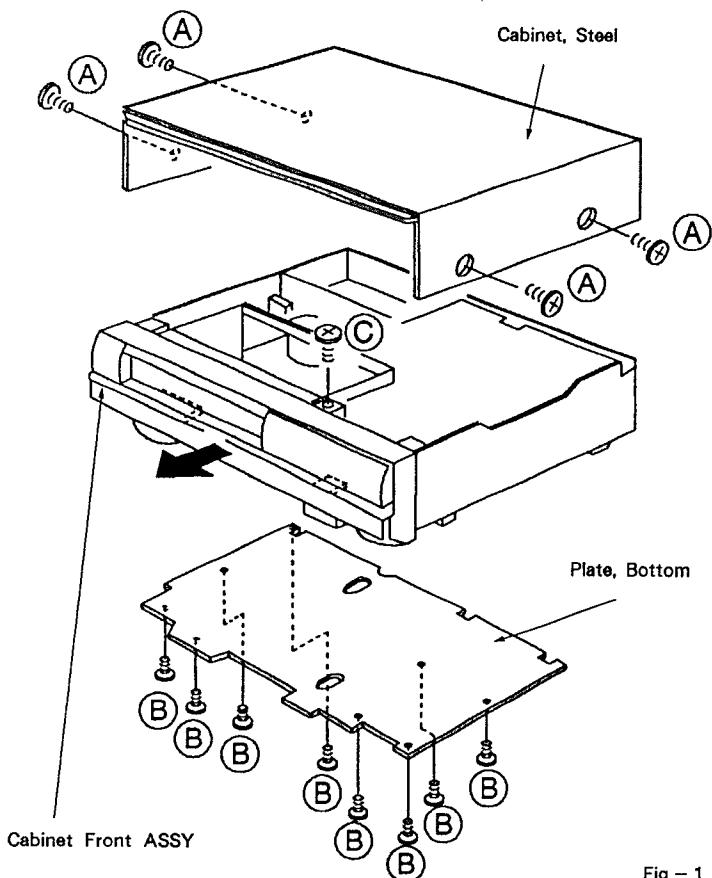

Fig - 1

### 3. "Mechanism ASSY" Removal (See Figure - 3)

- 1) Remove screw (Ⓐ) and disconnect the connector to remove the "Preamp/Audio C.B" in the direction of the arrow.
- 2) Remove 3 screws (Ⓑ) holding the "Mechanism ASSY".

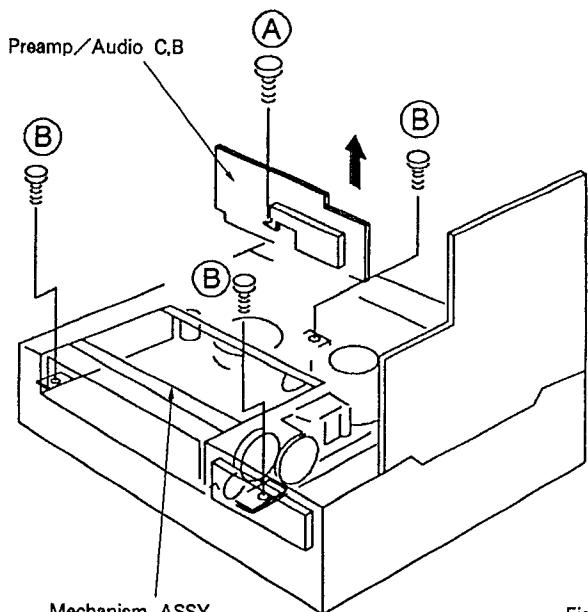

Fig - 3

### 2. "Power Unit ASSY and Main C. B" Removal

(See Figure - 2)

- 1) Remove 6 screws (Ⓐ) holding the "Main C.B".
- 2) Remove 3 screws (Ⓑ) and 2 screws (Ⓒ) holding the "Power Unit ASSY".

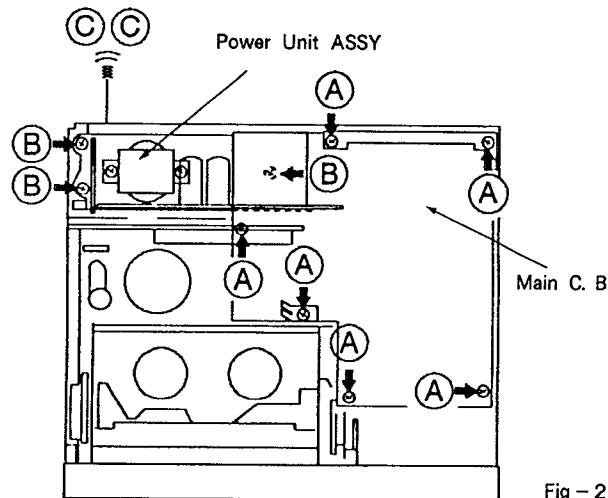

Fig - 2

4. "Front Loading ASSY" Removal (See Figure - 4)

- 1) Remove "Main Belt".
- 2) Remove 4 screws (A).
- 3) Release the hooks on both sides and remove the "Front Loading ASSY". (Since it is difficult to release these hooks, hold the front of the "Front Loading ASSY" and shake it up and down to release them.)

5. "Cassette Load Bracket ASSY" Removal (See Figure - 4)

- 1) Remove 1 screw (B).
- 2) Take off the "Cassette Load Bracket ASSY".

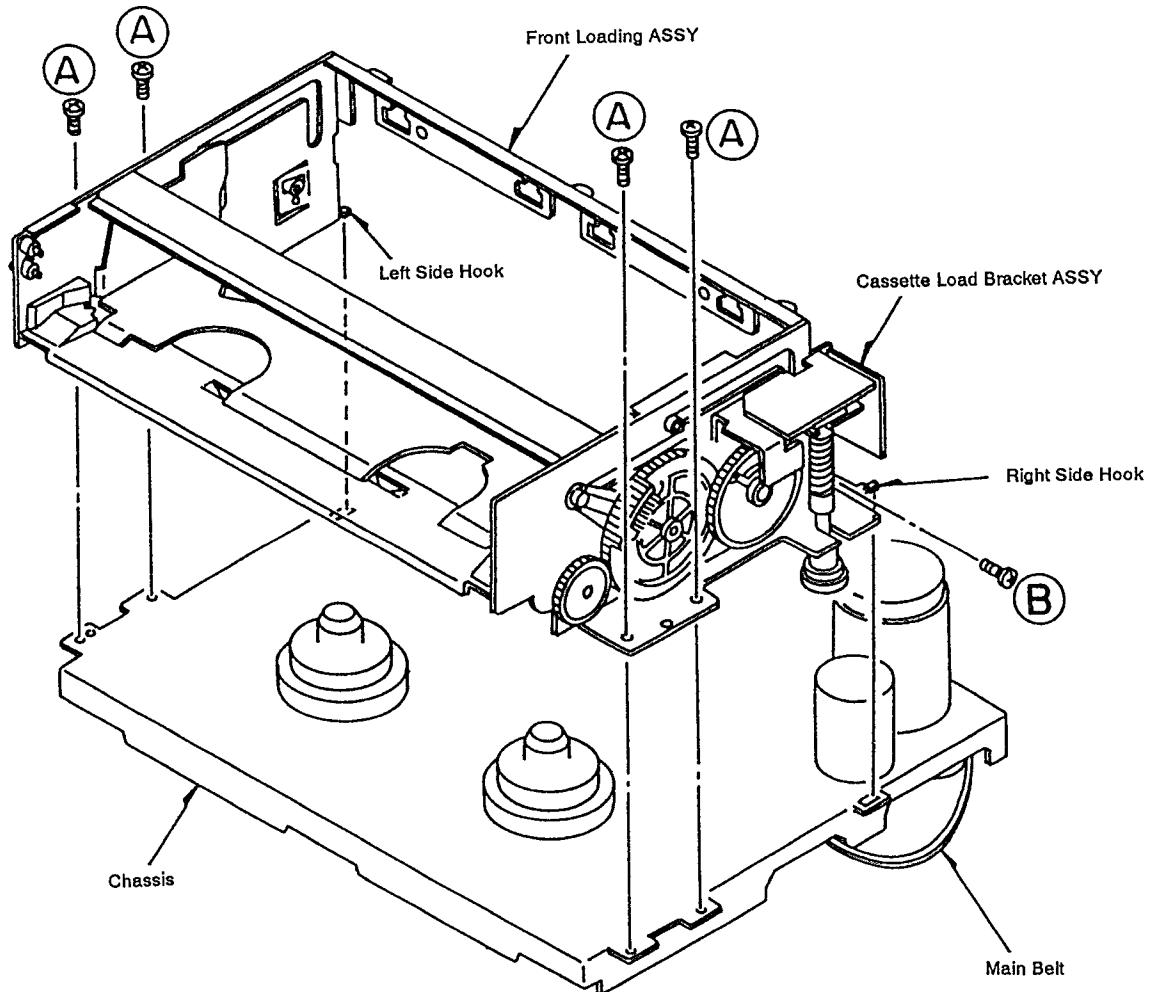

Fig-4

6. "Photo Sensor ASSY" Removal (See Figure – 5)

1. "Lamp Holder ASSY" Removal

1) Remove 1 screw (A) and take off the "T Soft Brake ASSY".

(At this time, never take off the "T – Spring, Soft Brake Arm".)

2) Release the "Lamp Holder ASSY" from hook (a) of the chassis and turn it counterclockwise to remove it from the chassis.

2. "Switch C. B", "Sensor Guide" and "Start Sensor C. B" Removal

1) Remove 1 screw (B) and take off the "Switch C. B".

2) Remove 1 screw (C) and take off the "Sensor Guide".

3) Remove 1 screw (D) and take off the "Start Sensor C. B".

3. "Sensor Guide" and "End Sensor C. B" Removal

1) Remove 1 screw (E) and take off the "Sensor Guide".

2) Remove 1 screw (F) and take off the "End Sensor C. B".

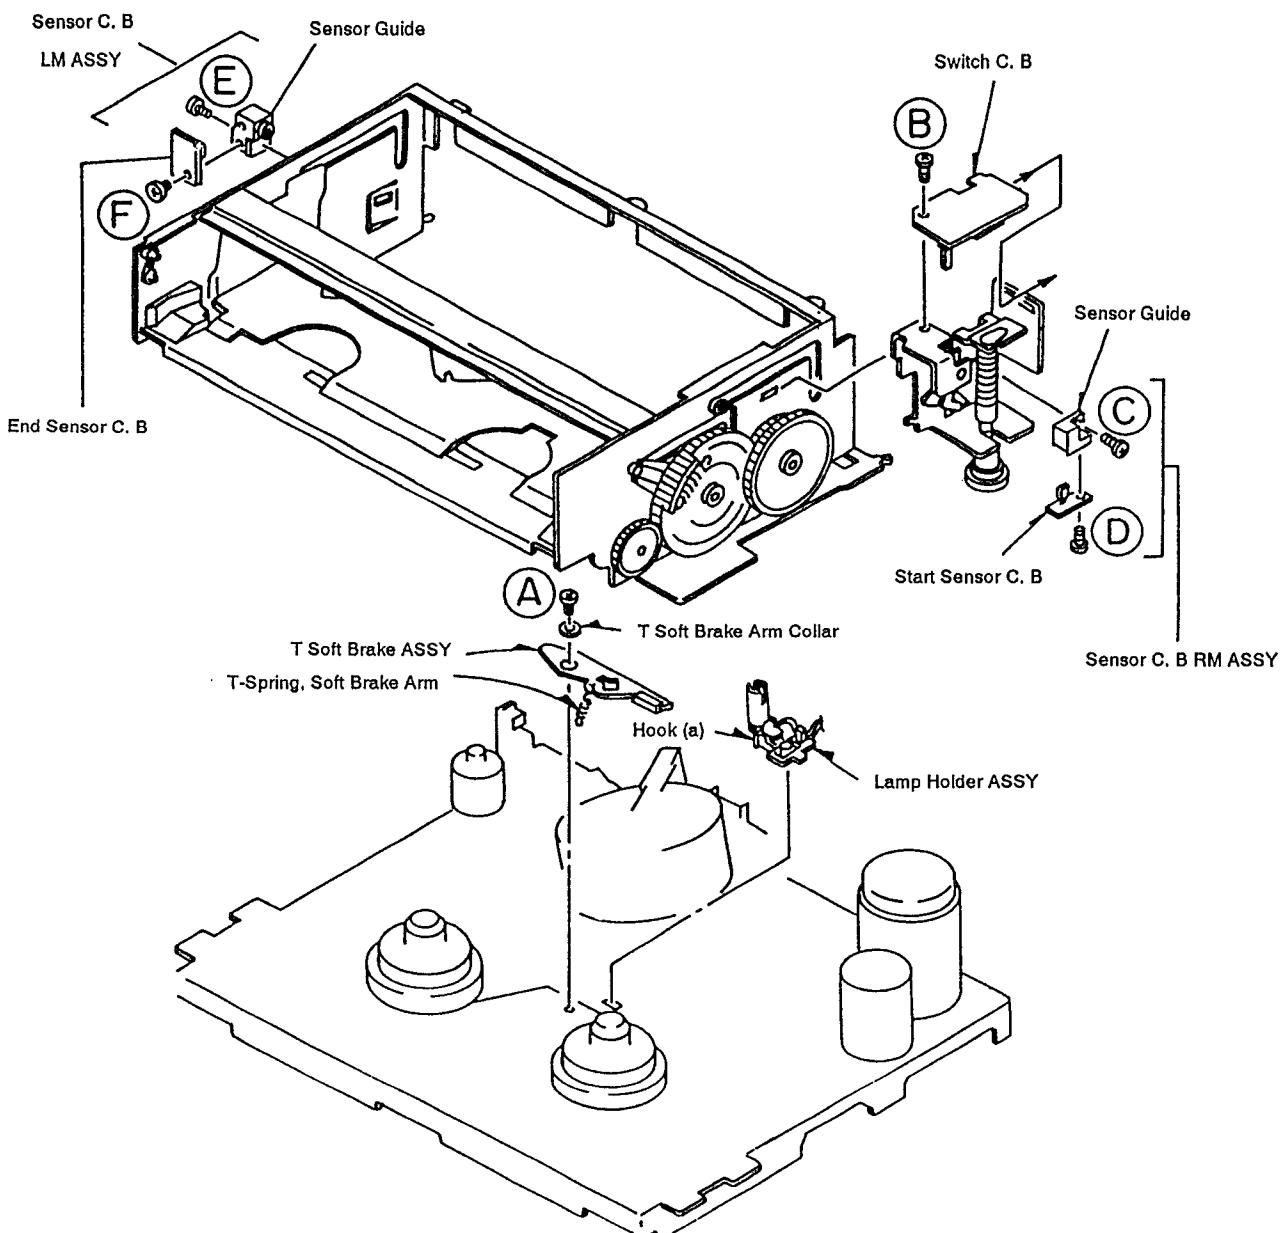

Fig-5

7. "FE Plate" and "ACE Head" Removal (See Figure -6)

1. "FE Plate" Removal

- 1) Remove Nut (A).
- 2) Take out the "Impedance Roller" and pull up the "FE Plate".

(Take care not to lose parts "Impedance Roller", "Impedance Roller Sleeve", "Tape Guide Flange A", "Tape Guide Flange Spring" and "Plane Washer 3×8×0.5" at the time of the "FE Plate" removal.)

- 3) Remove 1 screw (B) and take off the "Full Erase Head".

2. "ACE Head" Removal

- 1) Remove 3 screws (C)×1, (D)×1, (E)×1 and "Azimuth Spring".
- 2) Remove "ACE Head".

8. "Rec Actuator" Removal (See Figure -6)

- 1) Remove "Wire Holder".
- 2) Remove screw (F) and take off the "Leaf Switch".
- 3) Remove screw (G) and take off the "FE Actuate Lever", "FE Slide Plate" and "FE Actuate".
- 4) Remove screw (H) and take off the "Rec Lever", and "Rec Lever Spring".
- 5) Remove "Rec Actuate Spoke".
- 6) Remove "Rec Actuate".

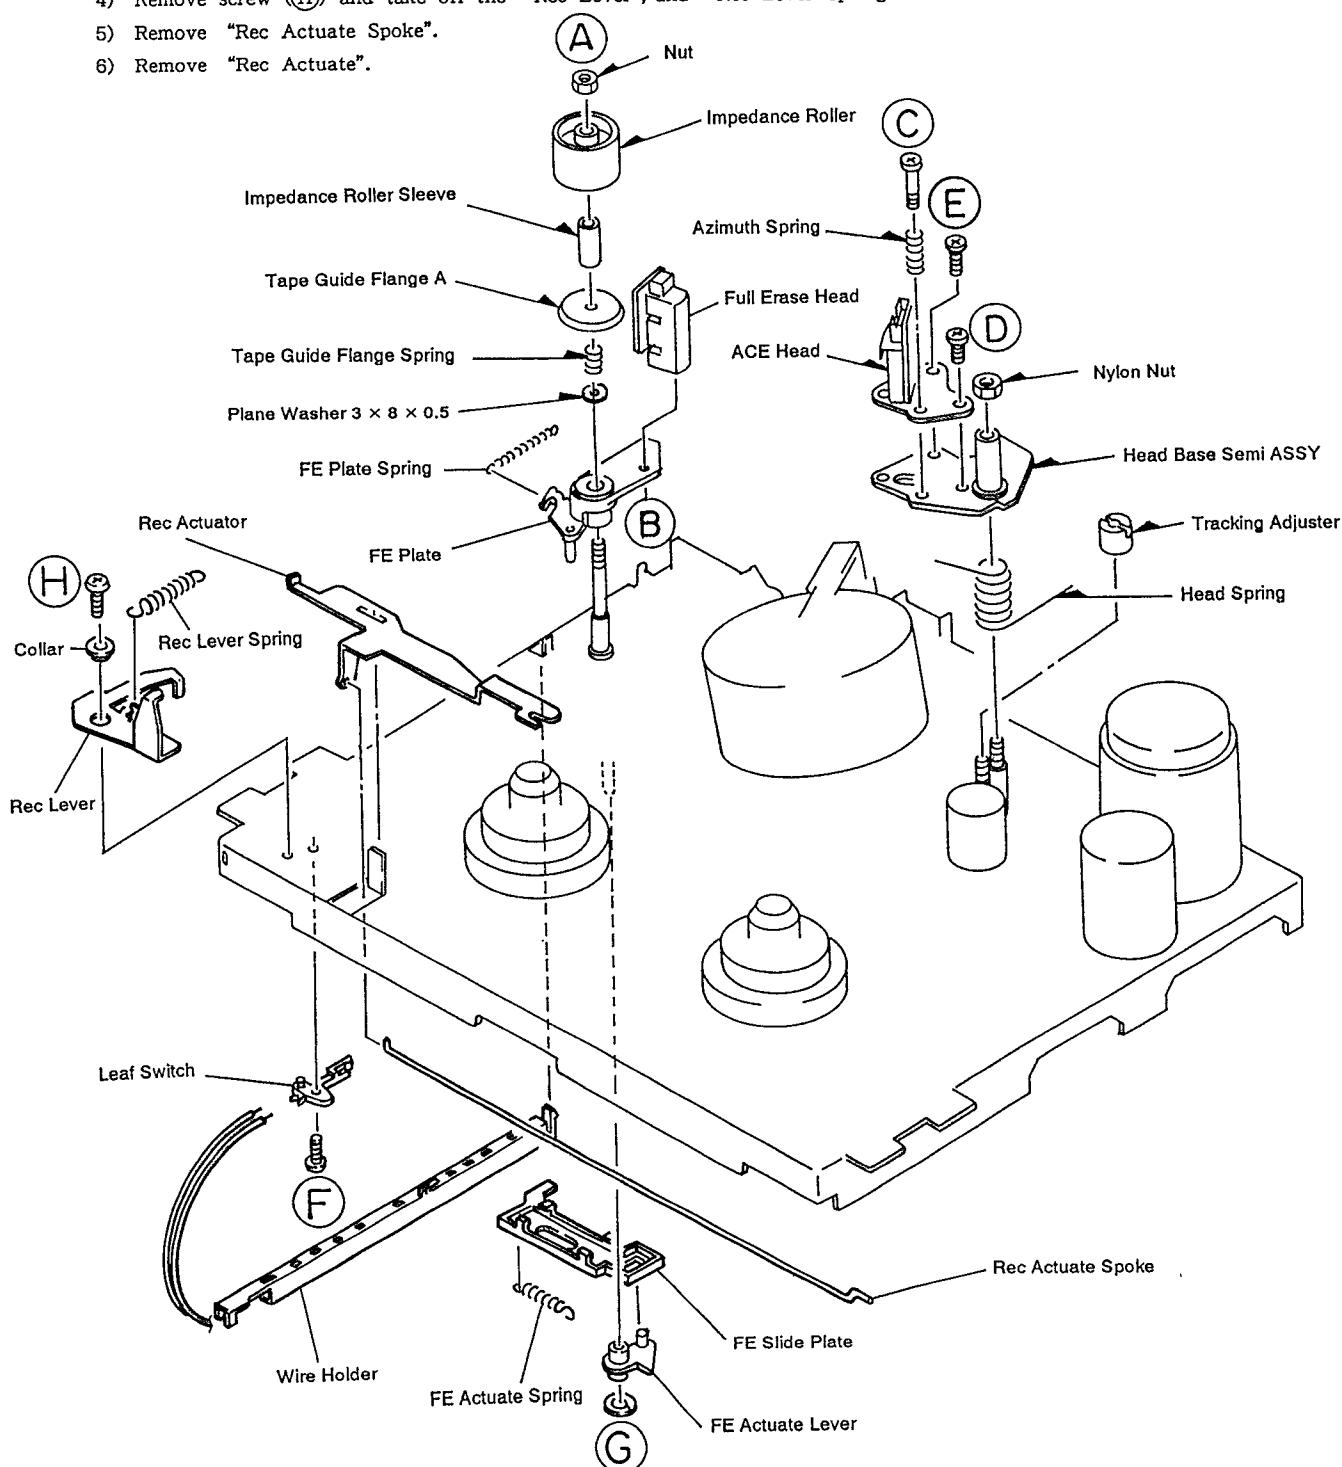

Fig.-6

9. "Sub Plate ASSY" Removal (See Figure - 7)

- 1) Remove the "Front Loading ASSY".
- 2) Remove "Drive Belt".
- 3) Remove Poly - Washer and "Middle Pulley ASSY".
- 4) Remove Nylon - Washer (A) and take off the "Clutch ASSY".
- 5) Remove 1 screw (B) and 2 screws (C) and take off the "Sub Plate ASSY".
- 6) Remove 1 screw (D) and take off the "T - Spring, Soft Brake Arm".
- 7) Take off the "T Soft Brake ASSY".
- 8) Remove 2 "E - Rings (E)" and take off the 2 "Reel Drive Gear".

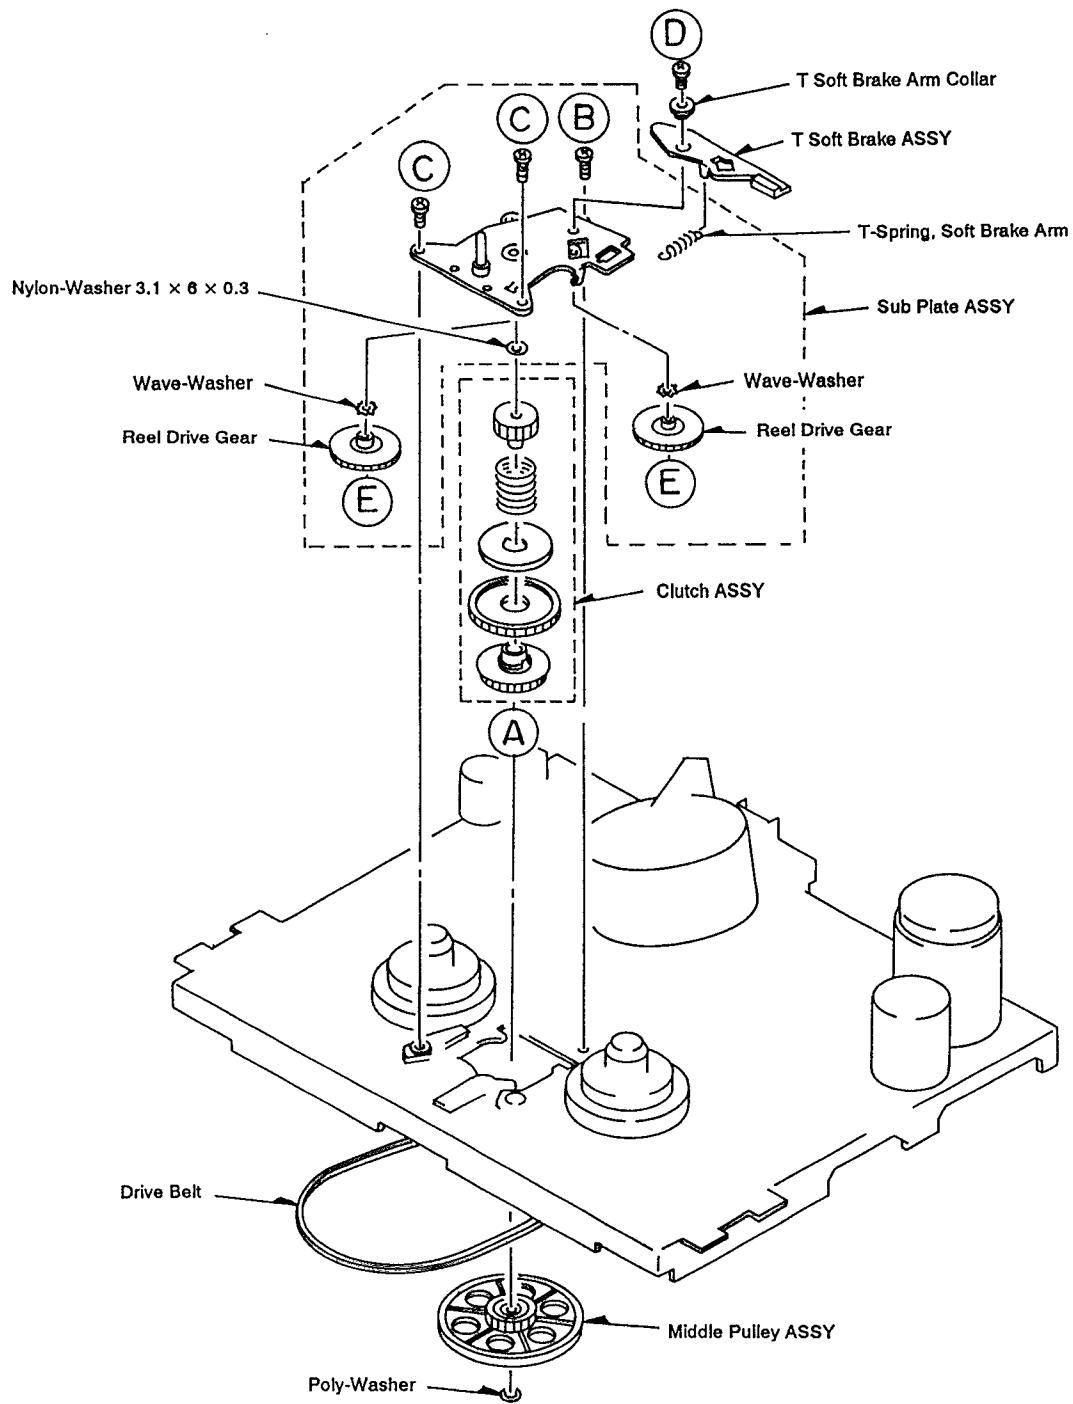

Fig.-7

10. "BT Band ASSY" And "BT Arm Semi ASSY" Removal (See Figure - 8)

- 1) Remove the "Front Loading ASSY".
- 2) Remove Poly - Washer (A) and "BT Actuate Plate Spring" from the "BT Arm Semi ASSY".
- 3) Remove 1 screw (B) and "Band Holder Spring".
- 4) Take off the "BT Band ASSY" from the "BT Arm Semi ASSY".

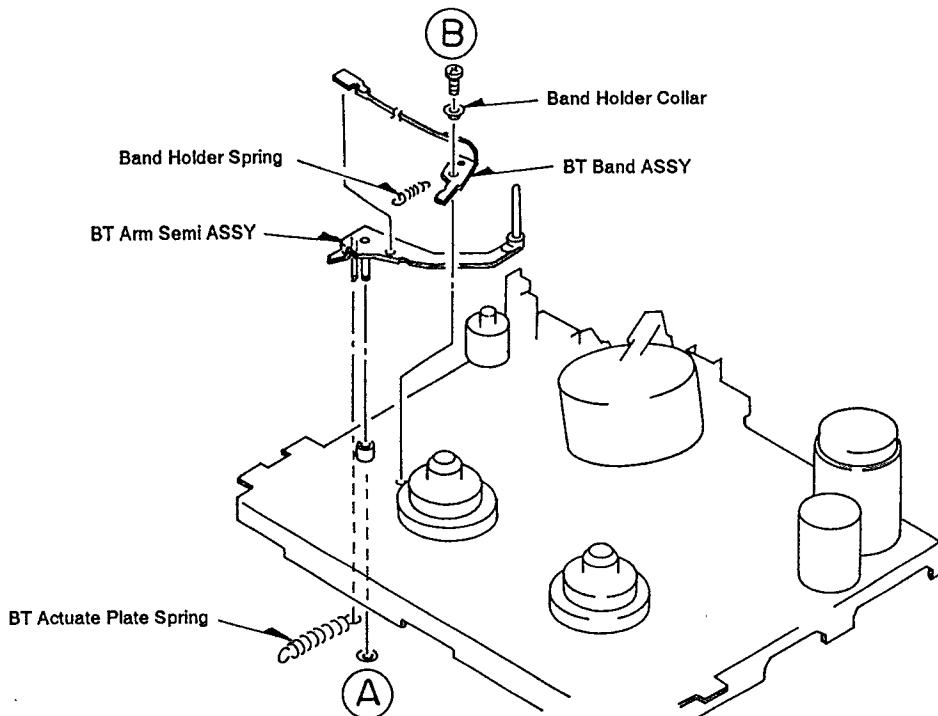

Fig.-8

11. "Reel ASSY" Removal (See Figure - 9)

- 1) Remove the "Front Loading ASSY", "Gear Holder ASSY" and "BT Band ASSY".
- 2) Remove 1 screw (A) and the "Back Tension Support".
- 3) Remove the 2 "Reel ASSY".

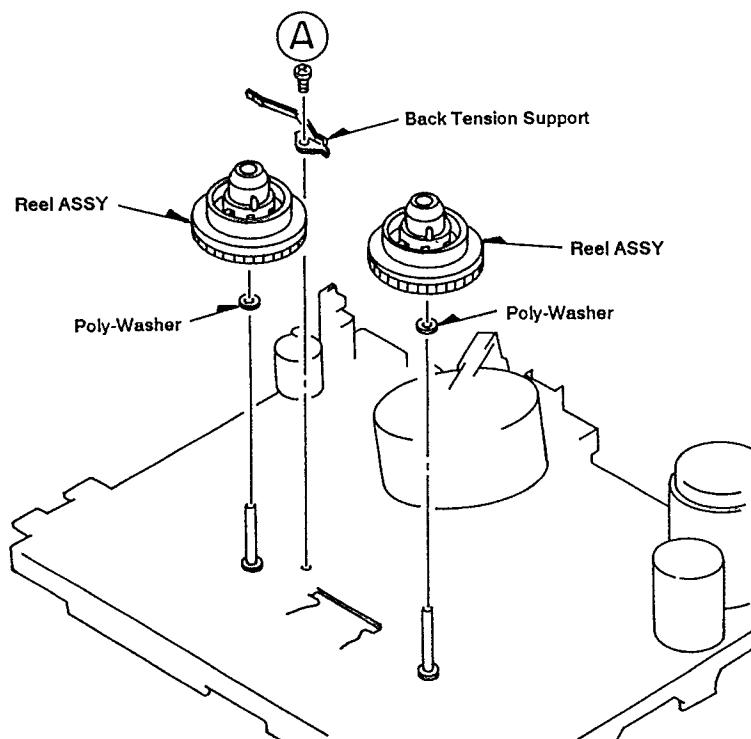

Fig.-9

12. "Cylinder ASSY" Removal (See Figure - 10)

- 1) Remove the "Front Loading ASSY".
- 2) Pull out the "RELAY C. B - 5" from the "Cylinder Motor TM82".
- 3) Remove 1 screw (Ⓐ) and take off the "Drum Earth".
- 4) Remove 3 screws (Ⓑ) and take off the "Cylinder ASSY".

= Remarks =

Take off the "Cylinder ASSY" carefully without any damage.

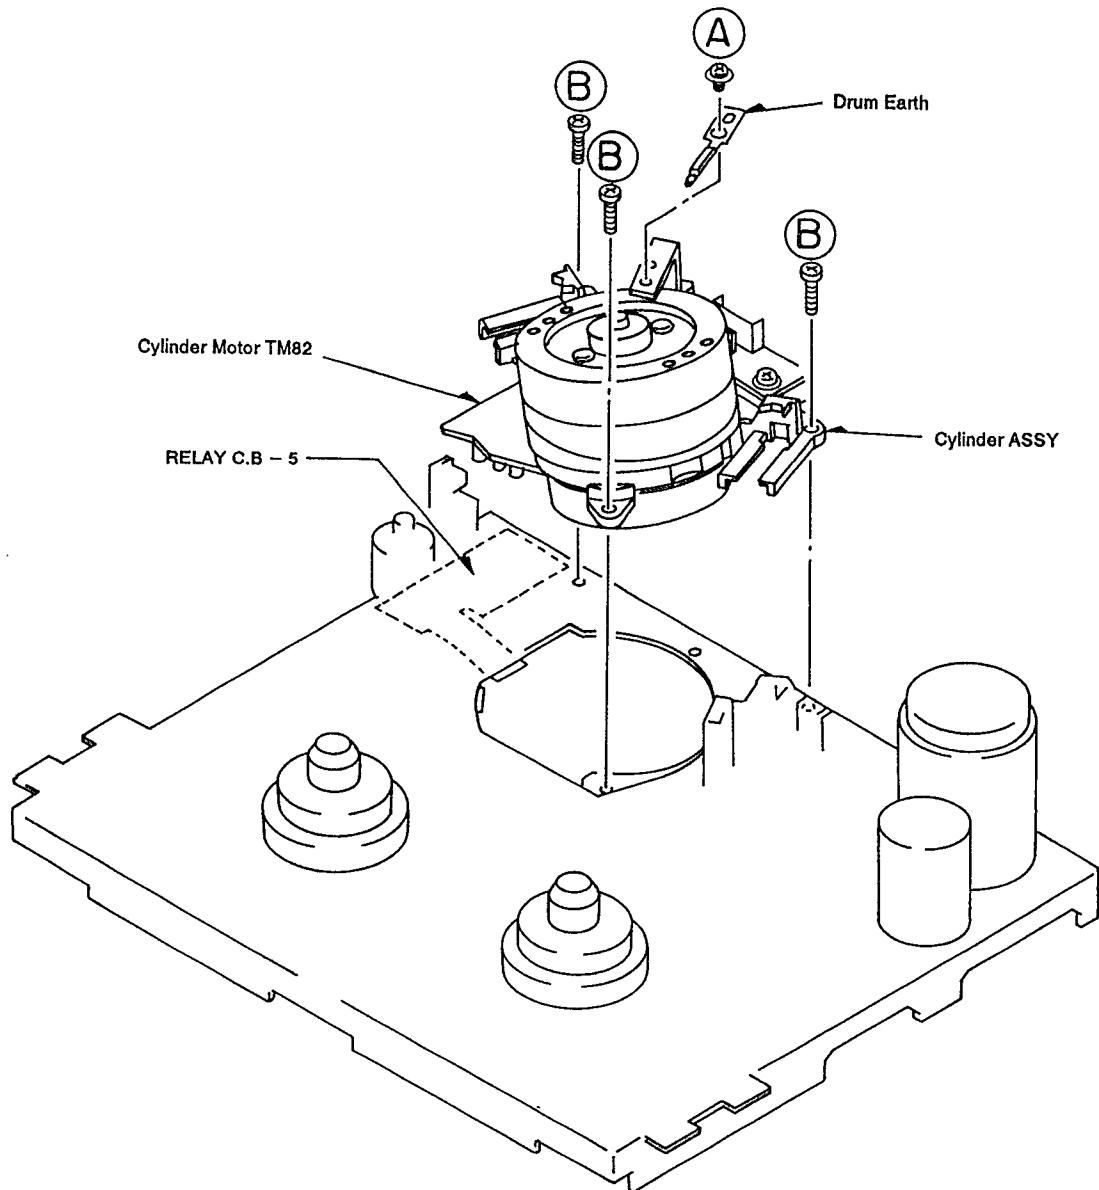

Fig.-10

13. "Upper Drum" Removal (See Figure - 11)
- 1) Remove the "Front Loading ASSY".
  - 2) Remove 1 screw (A) and take off the "Drum Earth Bracket".
  - 3) Remove 2 screws (B) and take off the "Upper Drum".

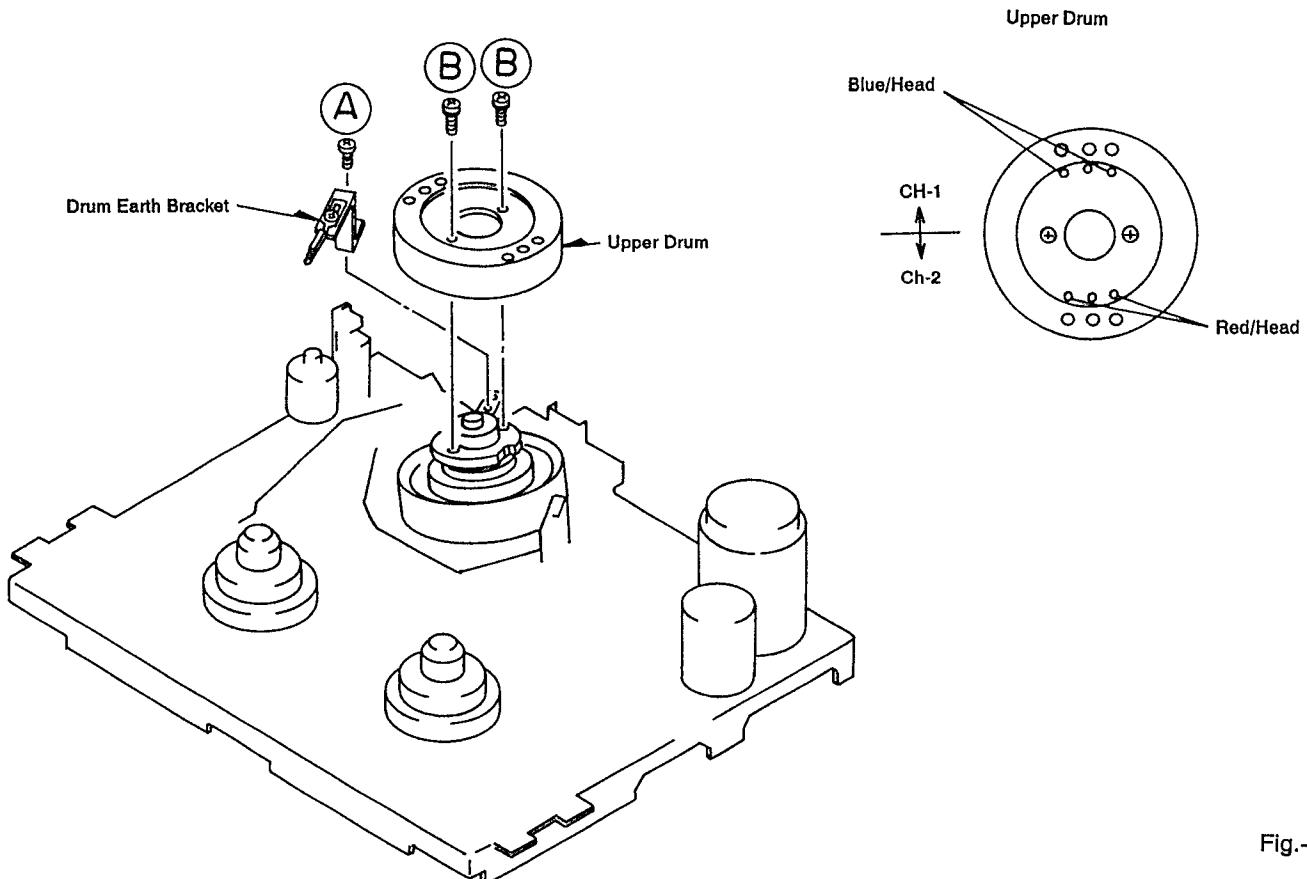

Fig.-11

= Remark =

1. Use gloves and do not touch the drum surface with bare fingers.
2. If the Video head is defective, replace the complete "Upper Drum" with the Head.
3. When installing "Upper Drum" and "Rotor", Upper Drum point ④, Lower Drum point ⑤ and Rotor point ⑥, these point ④, ⑤, ⑥ must line up each other. Otherwise it will creates problem. (See Figure - 11 - 1)

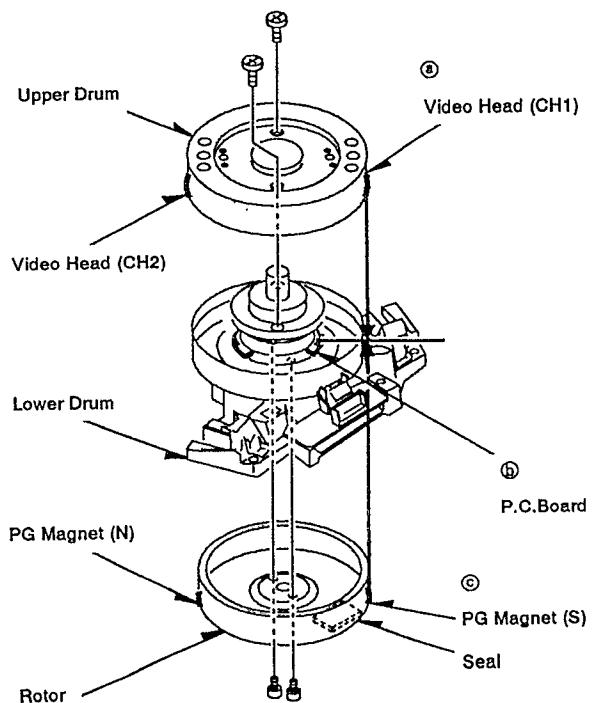

Fig.-11-1

14. "Cylinder Motor TM82" Removal (See Figure - 12)
- 1) Pull out the "RELAY C. B - 5" from the "Cylinder Motor TM82".
  - 2) Remove 2 screws (A) and take off the "Cylinder Motor TM82".
  - 3) Remove 3 screws (B) and take off the "Cylinder Motor TM82".

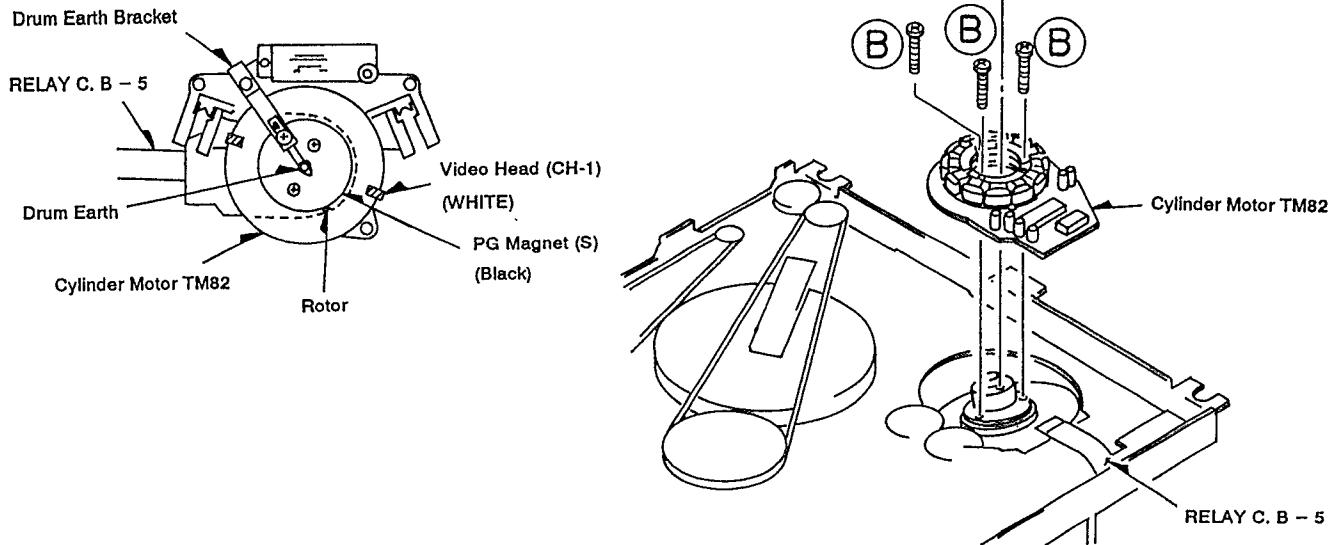

Fig.-12

15. "Capstan Motor ASSY" and "LM ASSY" Removal  
(See Figure - 13)

1. "Capstan Motor ASSY" Removal
  - 1) Take off the "Drive Belt" and "Main Belt".
  - 2) Remove 2 screws (A) and take off the "Capstan Motor ASSY".
2. "LM ASSY" Removal
  - 1) Take off the "FI Belt".
  - 2) Remove 2 screws (B) and take off the "LM ASSY".

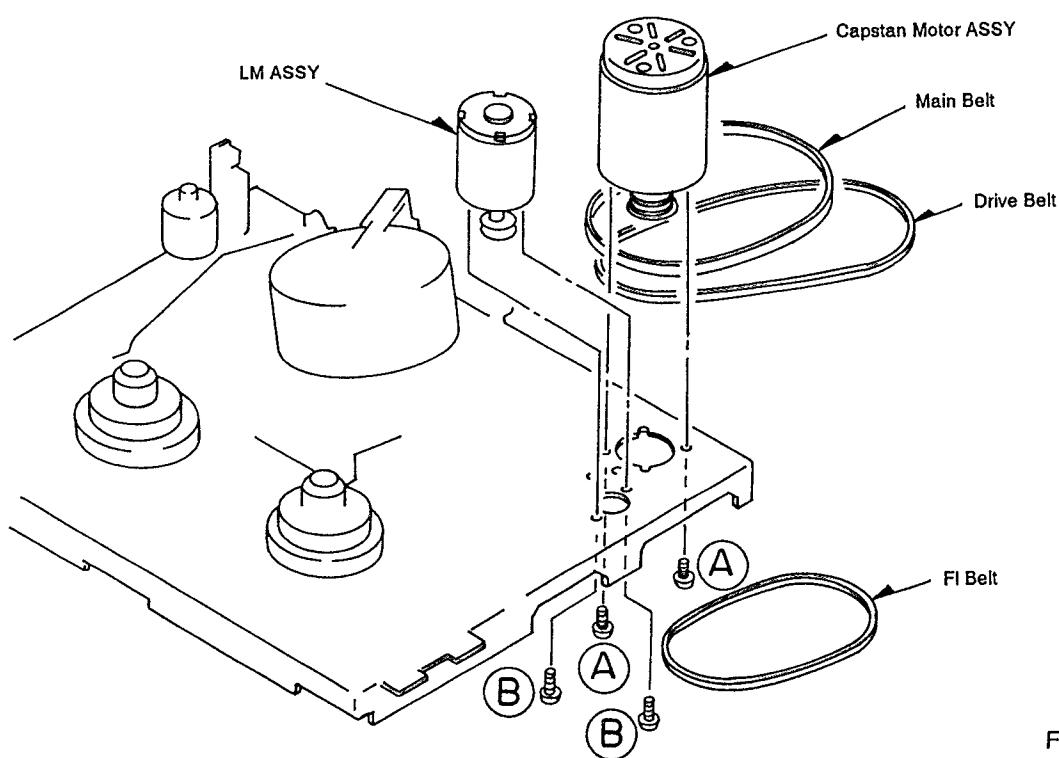

Fig.-13

18. "Reel Sensor" Removal (See Figure - 16)

1. Remove "Front Loading ASSY" and the "Gear Holder ASSY".
2. Remove "Reel ASSY".
3. Remove "Reel Sensor".

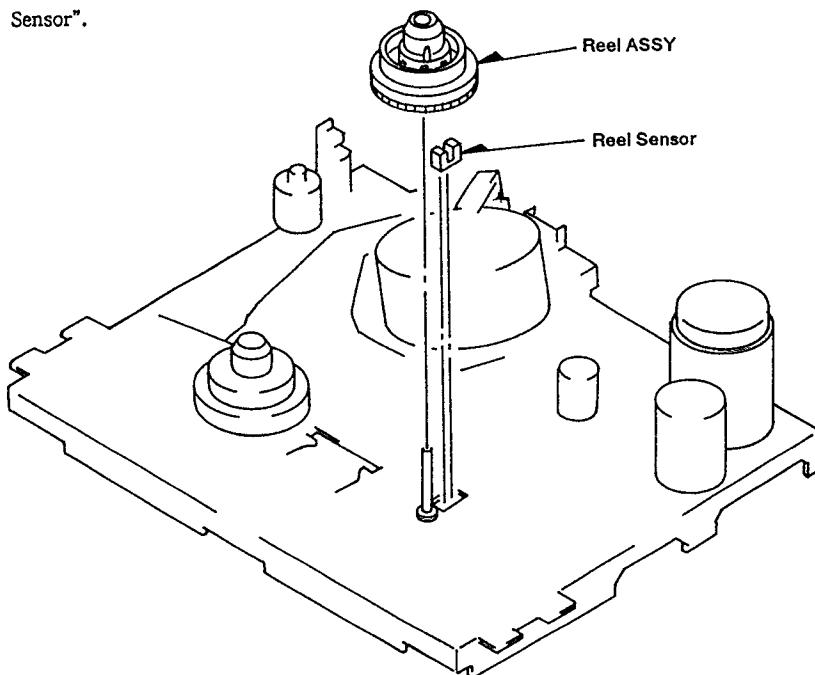

Fig.-16

19. "Loading Base Semi ASSY" Removal (See Figure - 17)

- 1) Remove "Cylinder ASSY", "BT Arm Semi ASSY", "BT Band ASSY" and "Front Loading ASSY".
- 2) Remove 1 screw (A) and "L Gear Plate Collar", "L Gear Plate".
- 3) Remove 2 screws (B).
- 4) Take off the "Loading Base Semi ASSY".

= Remark =

When installing the "L Gear Plate", align markings (C) on the "T Loading Gear L" and "L Gear Plate".

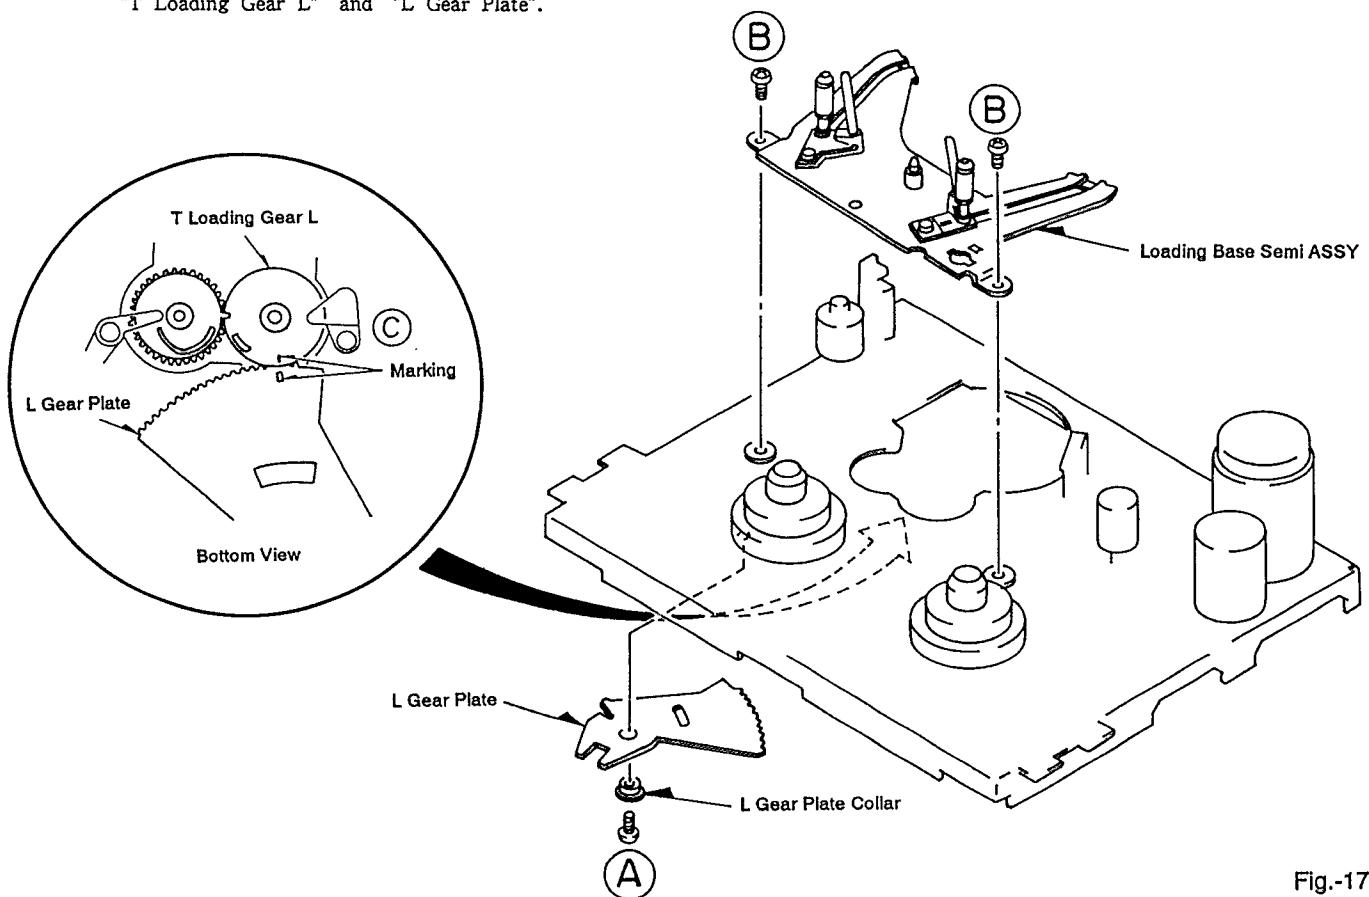

Fig.-17

20. "Wormwheel ASSY" Removal (See Figure - 18)

1. Disassembly

- 1) Remove "Front Loading ASSY".
- 2) Remove "Cassette Load Bracket ASSY".
- 3) Remove E - Ring (A).
- 4) Remove "Wormwheel ASSY." ("Wormwheel", "Friction Spring", "Friction Gear")

2. Assembly

- 1) Turn the "Lift Gear R" fully counterclockwise.
- 2) Restore "Wormwheel ASSY" to the stud.

= Remark =

Match "Lift Gear R" to the "Wormwheel Hole" as illustrated.

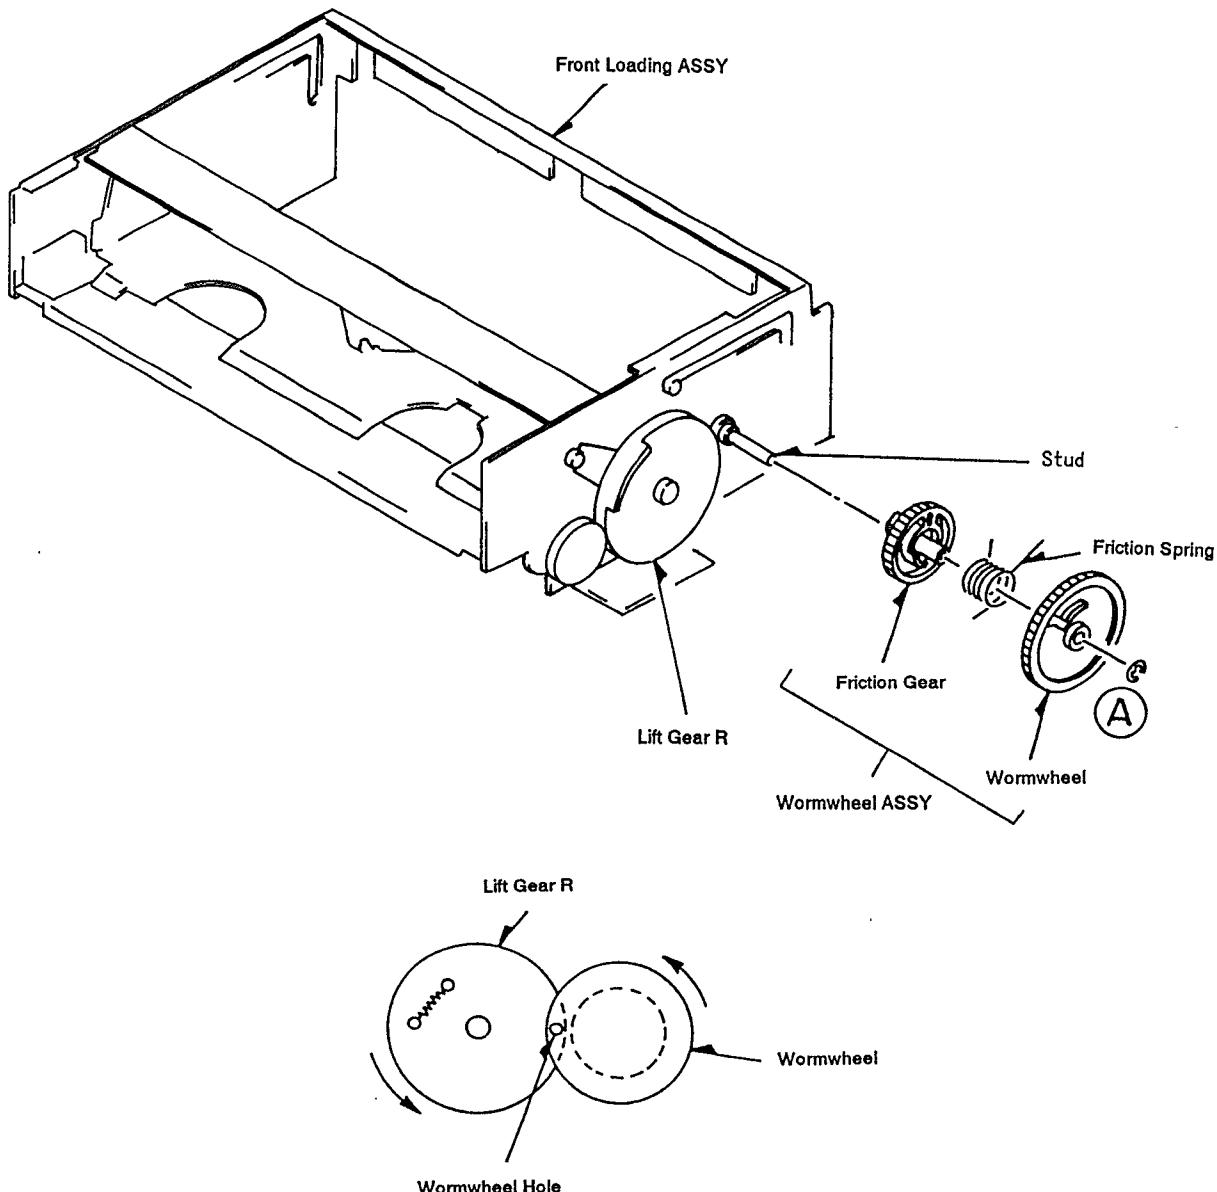

Fig-18

## PARTS LISTS SECTION

### NOTES

- PC boards shown are viewed from parts side.
- Parts marked with \* require longer delivery time.
- The parts with no reference number or no parts number in the exploded views are not supplied.
- As regards the resistors and capacitors, refer to the circuit diagrams contained in this manual.
- △ Parts marked with this sign are safety critical components. They must be replaced with identical components - refer to the appropriate parts list and ensure exact replacement.

# ELECTRICAL MAIN PARTS LIST

## NOTE:

As regards the resistors and capacitors, refer to the circuit diagrams and the PCB assy drawings contained in this manual.

## PRACTICAL SERVICE FIGURE

### Output Level

Video (Impedance) :  $1.0 \pm 0.2V_{p-p}$   
 $(75\Omega \pm 20\%, \text{ Unbalance})$

Audio (Impedance) :  $-8 \pm 3\text{dB}$  (Less than  $3.3k\Omega$ )

RF Modulated (Impedance) :  $75 \pm 3\text{dB}\mu\text{V}$  ( $75\Omega$ , Unbalance)

### Input Level

Video (Impedance) :  $0.5V \sim 2.0V \pm 0.5V_{p-p}$   
 $(75\Omega \pm 20\%, \text{ Unbalance})$

Audio (Impedance) :  $-10 \pm 3\text{dB}$  (More than  $47k\Omega$ )

### TV channels received

Destination	VHF Low	VHF High	UHF	Signal format	
				VHF	UHF
AUS	0~5	5A~11	E21~E69	VIF 36.9MHz, SIF 31.4MHz	B G

Tuner AGC :  $72 \pm 3\text{dB}$  (VHF, UHF)

### S/N Ratio

Video (SP mode) : [Test tape MVP – 08 (PB),  
MVP – 09 (PB),  
TDK HS – 120 (R/P)]

Signal	PB	R/P
Y-signal	More than 42dB	More than 42dB
Chrominance-Signal (AM)	More than 38dB	More than 38dB
Chrominance-Signal (PM)	More than 36dB	More than 35dB

Audio (SP mode) : More than 40dB

Audio Frequency Response :  $200\text{Hz} \sim 6\text{kHz} (\pm 4\text{dB})$

(SP mode, Test tape A – BEX TPV – 160S)

Horizontal Resolution : More than 230 Lines  
(PB, R/P)

(Test tape TTV – 06T)

Erase Ratio : More than 55dB

Bias Frequency :  $70\text{kHz} \pm 10\%$

Tape speed :  $23.39\text{mm/sec} \pm 0.5\%$   
(SP mode)

Wow & Flutter : Less than 0.4 %

(Test tape TTV – P5, CCIR WTD)

F.F time : Less than 290sec (E – 240)

REW time : Less than 290sec (E – 240)

Back tension :  $46.5 \pm 12\text{g-cm}$

Loading : Less than 3sec

Unloading : Less than 3.5sec

## IC DESCRIPTION

### IC, MB88525 – 205M (IC201)

Pin No.	Pin Name	I/O	Description	Active																
1	TOP – SENSOR (START)	I	Receives the tape top (start) detection signal and A) Prevents the tape running in the reverse direction. B) Shifts the unit to the stop mode if this signal is input when the tape is running in reverse.	H																
2	END – SENSOR	I	Receives the tape end detection signal and A) Prevents the tape running in the forward direction. B) Shifts the unit to the stop mode if this signal is input when the tape is running in forward.	H																
3	RF – SWP	I	Receives drum rotation pulses. When pulses are not input for 2 seconds in a mode where the drum is rotating due to an abnormality in the tape or deck mechanism, the VCR enters the stop mode to protect the tape.	Pulse																
4	REEL – SENSOR	I	Receives a signal from the reel sensor in the deck mechanism. When pulses are not input for 2 seconds in a mode where the reel is rotating due to an abnormality in the tape or deck mechanism, the VCR enters the stop mode to protect the tape.	Pulse																
5	CASSETTE – OUT	I	The CASSETTE OUT switch in the cassette loading mechanism is connected to detect the cassette-out state (eject). Instructs the cassette out operation (unloading) to stop.	L																
6	CASSETTE – START	I	The CASSETTE START switch in the cassette loading mechanism is connected to instruct the cassette-in operation (loading). When the input is detected during the cassette-out operation, the capstan motor is pulse driven.	L																
7	CASSETTE – IN	I	The cassette-in switch in the cassette loading mechanism is connected to detect the cassette-in state.	L																
8	—	—	Unused (pulled up).	—																
9 10 11 12	MODE SW 1 MODE SW 2 MODE SW 3 MODE SW 4	I	These pins detect the position of the tape sledding mechanism.	H or L

## 2. AUTO NOISE CANCELLER

When the STILL button is pressed during play, the auto noise canceller drives noise bars out of the screen so that they are not visible.

### [Function devices]

IC207, IC209, Q213, Q214

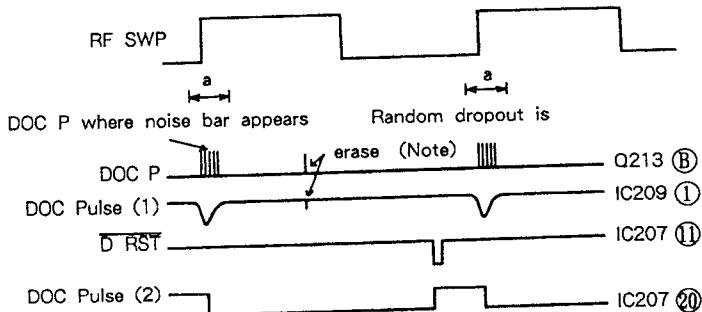

### [Conditions]

IC207 determines whether the auto cancelling function should be operated or not and executes operation.

1. IC207 (41) High (PB)
2. IC207 (38) High (PAUSE)

### [Principle]

The position of the noise bar can be known from the DOC P waveform in the video circuit. If the DOC P waveform is in area (a) of the RF SWP pulse as shown in the diagram below, the noise bar is not visible on the TV screen. The following DOC P pulse is produced so that IC207 (microprocessor) can read it easily.

1. When the trailing edge of the DOC P pulse is within range (a) in the STILL mode, the cancelling operation is not necessary.
2. When it is out of range (a), the pulse which turn the capstan motor minutely are generated at pin 8 of IC207.
3. When the tape is fed minutely and the trailing edge of the DOC P pulse enters area (a), the generating of pulses is stopped.

The DOC pulse moves to the right with reference to the RF SWP pulse in steps 2 and 3.

(Note) When tapes with large random dropouts are used, the random dropouts and DOC pulses cannot be discriminated and the unit performs the detection erroneously.

Pin No.	Pin Name	I/O	Description

## CIRCUIT DESCRIPTION

### 1. AUTO TRACKING

When the VCR is in a play mode other than the JOG (CUE/REV) and STILL modes, this function operates by turning AUTO TRACKING on (IC207 pin(2): High).

#### [Function devices]

IC207, Q450, Q451, Q210, Q211, Q212 and peripheral capacitors and resistors.

#### [Principle]

The tracks are traced so that the CTL signal (which is delayed = TR MM) is servo - locked during play. However, the CTL heads have tolerances within the specification in different mechanisms, therefore, TR MM (tracking control) is adjusted with ordinary VCRs and the CTL signal is set to the optimum position.

The auto tracking function detects the level of the signals output from the video heads and sets the delay from the CTL signal so that the level is maximum. Auto tracking is performed through the following three processes.

1. Search ... Detects the position where the level is maximum.
2. Fixing ... Fixes the delay so that the level is optimum.
3. Monitoring of change ... Detects whether or not the recording state was changed, and if a change is detected, searching re - started.

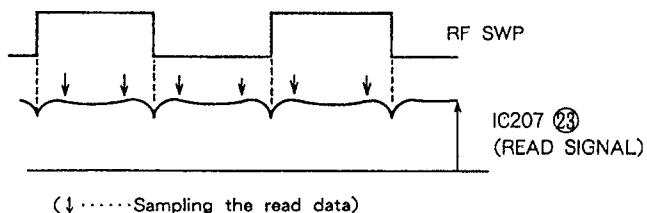

#### [Operation]

##### 1. Search

- a. When a cassette is loaded and the VCR first enters the play mode.
- b. When the recording state was changed and the head output level changes (change of  $\pm 1/8$  or more from the design value).
- c. When there are non - signal recorded sections and recorded sections due to a change of recording state.

When the auto tracking circuit detects one of the following items, a, b and c, it performs searching and controls the delay from the CTL signal in steps so that the head output level is maximum.

Since the read levels vary as shown in the diagram below due to different rotation angles of the drum heads, the read timing is specified from RF SWP and the average read data is detected to improve reliability.

##### 2. Fixing

The delay is varied by the auto compulsory tracking MM (Q210, Q211, Q212) and the signal levels at each delay time are read. When the maximum level is detected, it is stored in memory and the delay is fixed.

The data of the tape with which search is completed is stored until ejection of power off is performed and the VCR enters the AUTO mode at the start of play without passing through search even when the stop mode is entered.

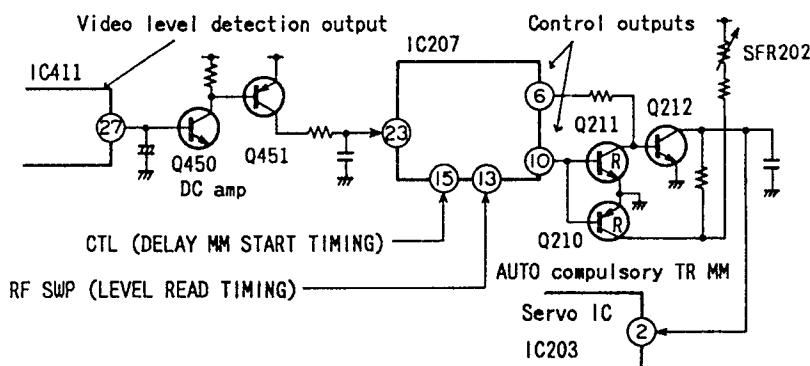

##### 3. Monitoring of changes

The auto tracking circuit always monitors an abnormality even if the delay is fixed in the AUTO mode, and if any change occurs, it repeats search to adjust the tracking for the best.

(Note) The LED does not light in the following case even if the auto tracking switch is turned on.

When a tape with no signal recorded on it is played.

(presence/absence of CTL signal)

## 2. AUTO NOISE CANCELLER

When the STILL button is pressed during play, the auto noise canceller drives noise bars out of the screen so that they are not visible.

### [Function devices]

IC207, IC209, Q213, Q214

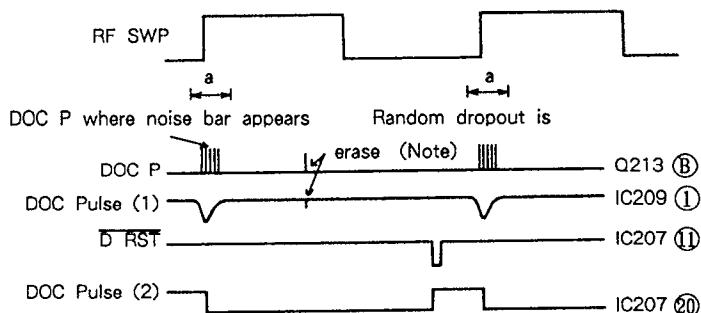

### [Conditions]

IC207 determines whether the auto cancelling function should be operated or not and executes operation.

1. IC207 (41) High (PB)
2. IC207 (38) High (PAUSE)

### [Principle]

The position of the noise bar can be known from the DOC P waveform in the video circuit. If the DOC P waveform is in area (a) of the RF SWP pulse as shown in the diagram below, the noise bar is not visible on the TV screen. The following DOC P pulse is produced so that IC207 (microprocessor) can read it easily.

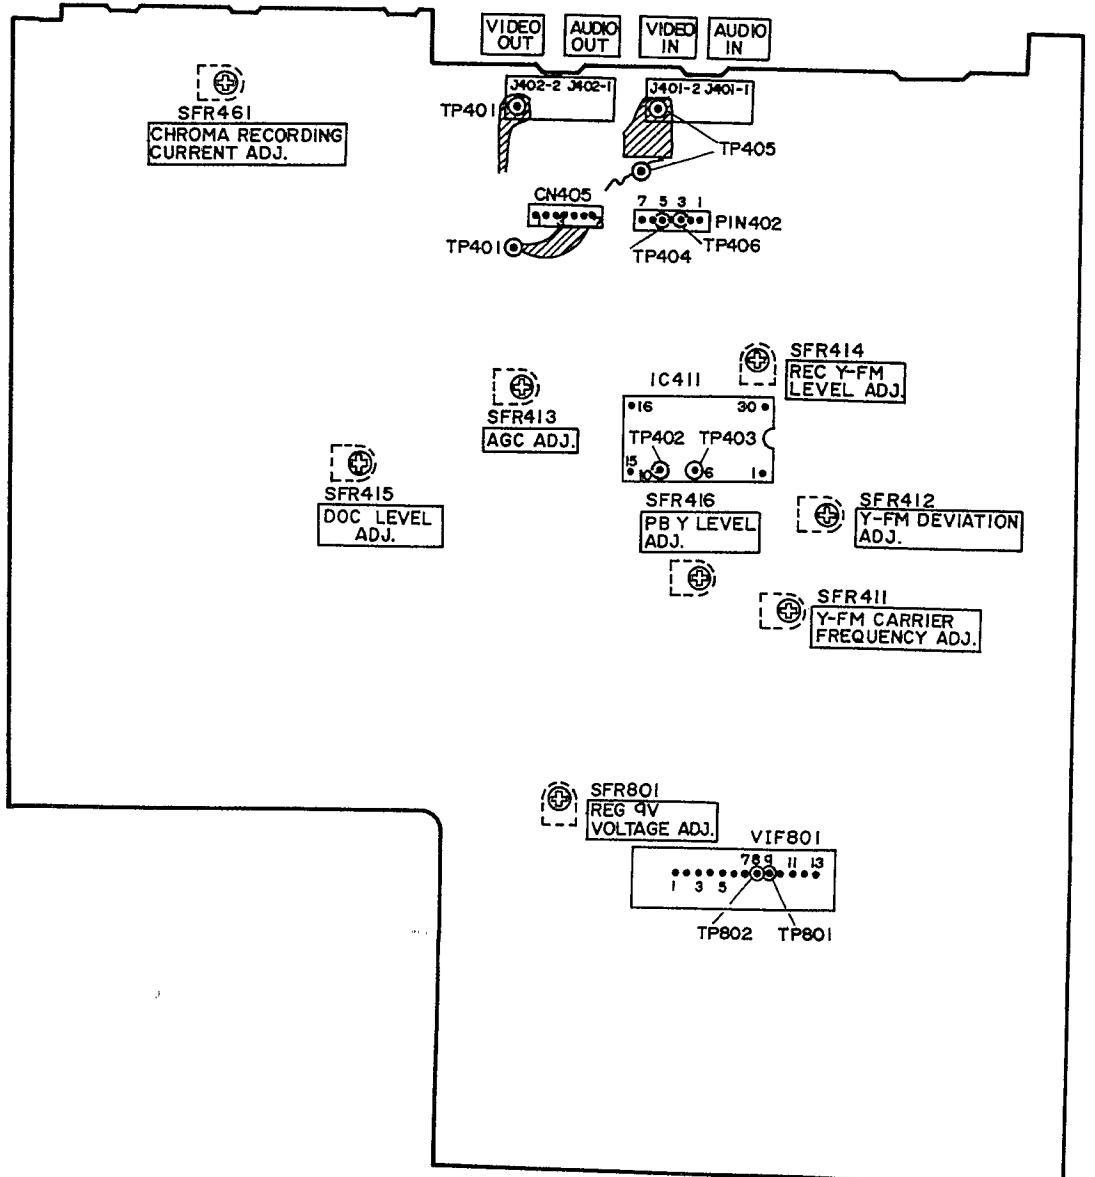

1. When the trailing edge of the DOC P pulse is within range (a) in the STILL mode, the cancelling operation is not necessary.
2. When it is out of range (a), the pulse which turn the capstan motor minutely are generated at pin 8 of IC207.
3. When the tape is fed minutely and the trailing edge of the DOC P pulse enters area (a), the generating of pulses is stopped.

The DOC pulse moves to the right with reference to the RF SWP pulse in steps 2 and 3.

(Note) When tapes with large random dropouts are used, the random dropouts and DOC pulses cannot be discriminated and the unit performs the detection erroneously.

## A MAIN C.B (PATTERN SIDE)

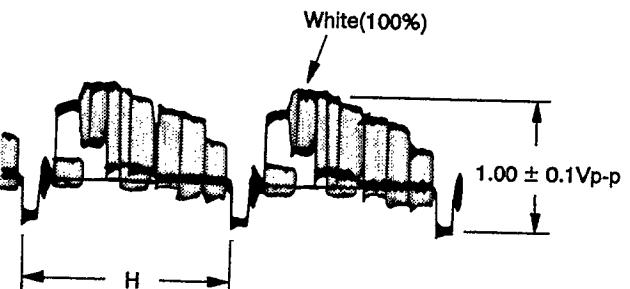

## 2. Tuner section adjustment

- REG 9V Voltage Adjustment (A MAIN C.B)

Digital voltmeter Positive terminal : VIF801 pin ⑨  
(TP801)

Negative terminal : VIF801 pin ⑧  
(TP802)

Adjust SFR801 so that the voltage is within the specification,  $9.00 \pm 0.05$ V.

## 3. Video circuit adjustment

- PB Y-FM Level Adjustment (A MAIN C.B)

Oscilloscope : VIDEO OUT (TP401)

1) Play alignment tape TTV - P1.

2) Adjust SFR416 so that the white 100% level is as shown in the figure below.

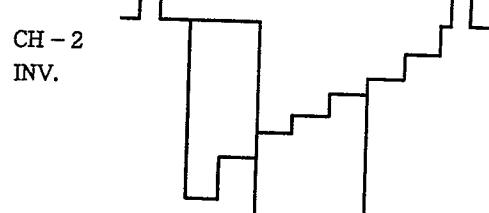

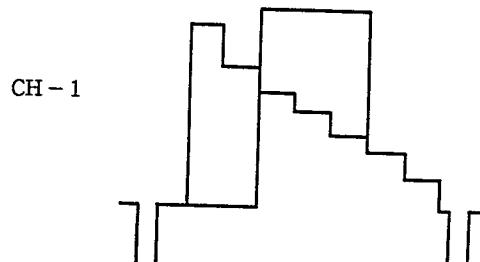

\* Terminate the VIDEO OUT jack with 75 ohms or connect a monitor to it.

- DOC Level Adjustment (A MAIN C.B)

Oscilloscope CH - 1 : IC411 Pin ⑩ (TP402)

CH - 2 : IC411 Pin ⑨

- Play back the test tape TTV - P1.
- Turn the oscilloscope CH - 2 INV switch on.
- Turn the oscilloscope VERT MODE ADD switch on.
- Adjust SFR415 so that the waveform becomes minimum as shown in the figure.
- Leave the oscilloscope power range the same as that of the CH - 1 and CH - 2 range.

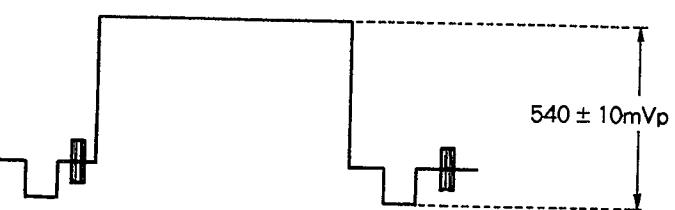

- AGC Adjustment (A MAIN C.B)

Oscilloscope : IC411 pin ⑥ (TP403)

1) Switch the input selector to LINE.

2) Apply a 100% white signal to the VIDEO IN jack.

3) Adjust SFR413 so that the Y signal is as shown in the figure below in the E-E mode.

- Y-FM Carrier Frequency Adjustment (A MAIN C.B)

Oscilloscope : PIN402 pin ⑤ (TP404)

1) Switch the input selector to LINE.

2) Set the VCR to the no signal input state (with no input connected to the VIDEO IN jack).

3) Set the VCR to the E-E mode.

4) Adjust SFR411 so that the frequency counter reads  $3.8\text{MHz} \pm 0.05\text{MHz}$ .

- Y-FM Deviation Adjustment (A MAIN C.B)

\* The Y FM carrier frequency adjustment should have been completed.

Oscilloscope : VIDEO OUT (TP401)

1) Switch the input selector to LINE.

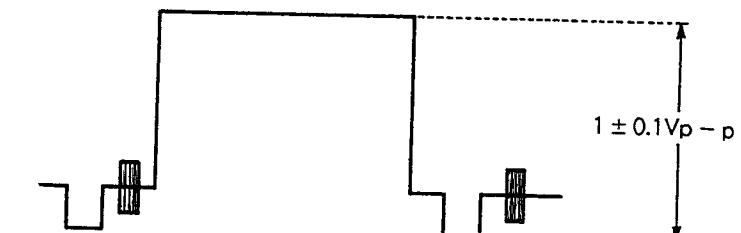

2) Record a 100% white signal.

3) Play the recorded section and check the Y signal level.

4) IF out of specification turn SFR412.

5) Repeat 2) ~ 4) until observe the waveform as indicated below.

\* Terminate the VIDEO OUT jack with 75 ohms or connect a monitor to it.

- REC Y-FM Level Adjustment (A MAIN C.B)

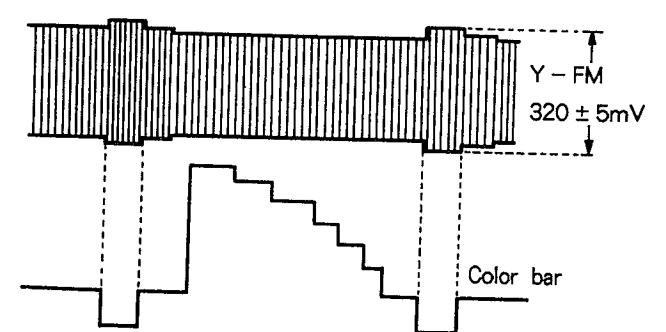

Oscilloscope CH - 1 : PIN402 pin ⑤ (TP404)

CH - 2 : VIDEO IN (TP405)

1) Switch the input selector to LINE.

2) Apply a color bar signal or 100% white signal to the VIDEO IN jack.

3) Adjust SFR414 so that the synchro signal level of the Y FM level is as shown in the figure below in the E-E mode.

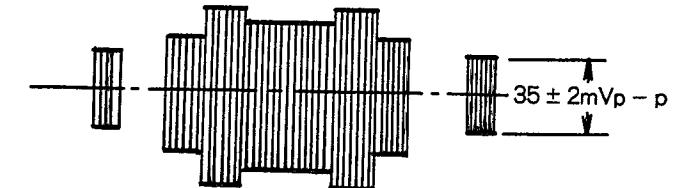

- Chroma Recording Current Adjustment (A MAIN C.B)

Oscilloscope : PIN402 pin ③ (TP406)

1) Switch the input selector to LINE.

2) Apply a color bar signal to the VIDEO IN jack.

3) Set the VCR the record mode and adjust SFR461 so that the burst level is as shown in the figure below.

## ELECTRICAL ADJUSTMENT

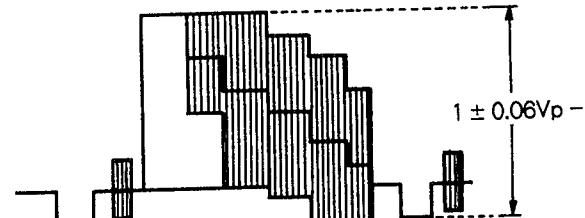

### Preparation for adjustment

Input signal (100% white)

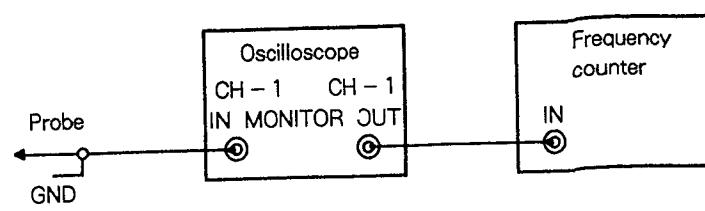

\*Note : Voltage measured with a signal generator connected to the VCR

Input signal (color bar)

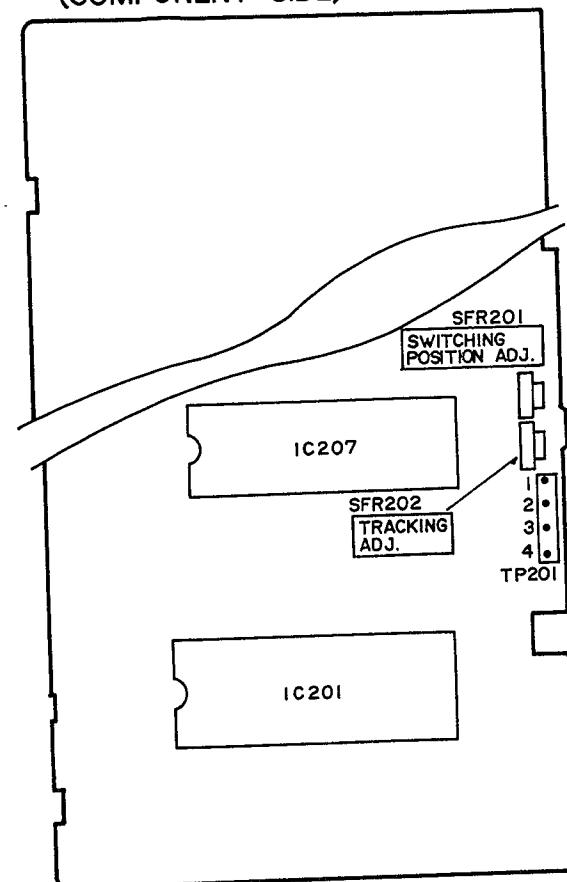

\*Note : Voltage measured with a signal generator connected to the VCR

Connections of test equipment

**B SERVO/SYSCON C.B  
(COMPONENT SIDE)**

### 1. Servo circuit adjustment

#### (1) Tracking Adjustment (B SERVO/SYSCON C.B)

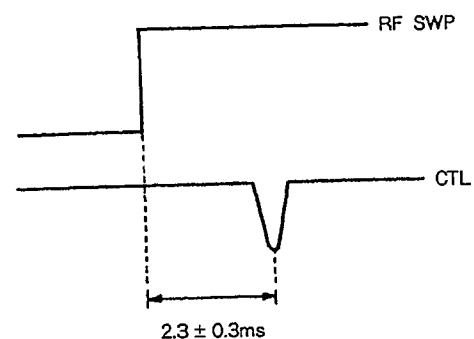

Oscilloscope CH - 1 : TP201 pin ② (RF SWP)

CH - 2 : TP201 pin ① (CTL)

1) Set RV901 (tracking VR) to the center position.

2) Play alignment tape TTV - P1.

3) Adjust SFR202 so that the position of the CTL signal is as shown in the figure below.

#### (2) Switching Position Adjustment (B SERVO/SYSCON C.B)

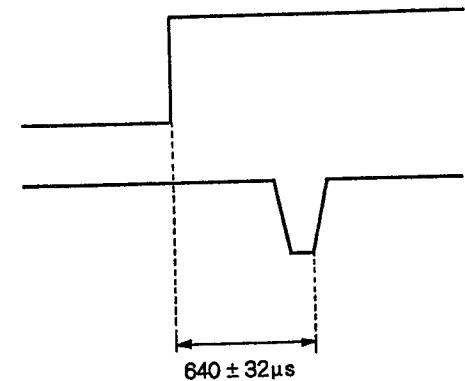

Oscilloscope CH - 1 : TP201 pin ② (RF SWP)

CH - 2 : TP201 pin ④ (V SYNC)

1) Set RV901 (tracking VR) to the center position.

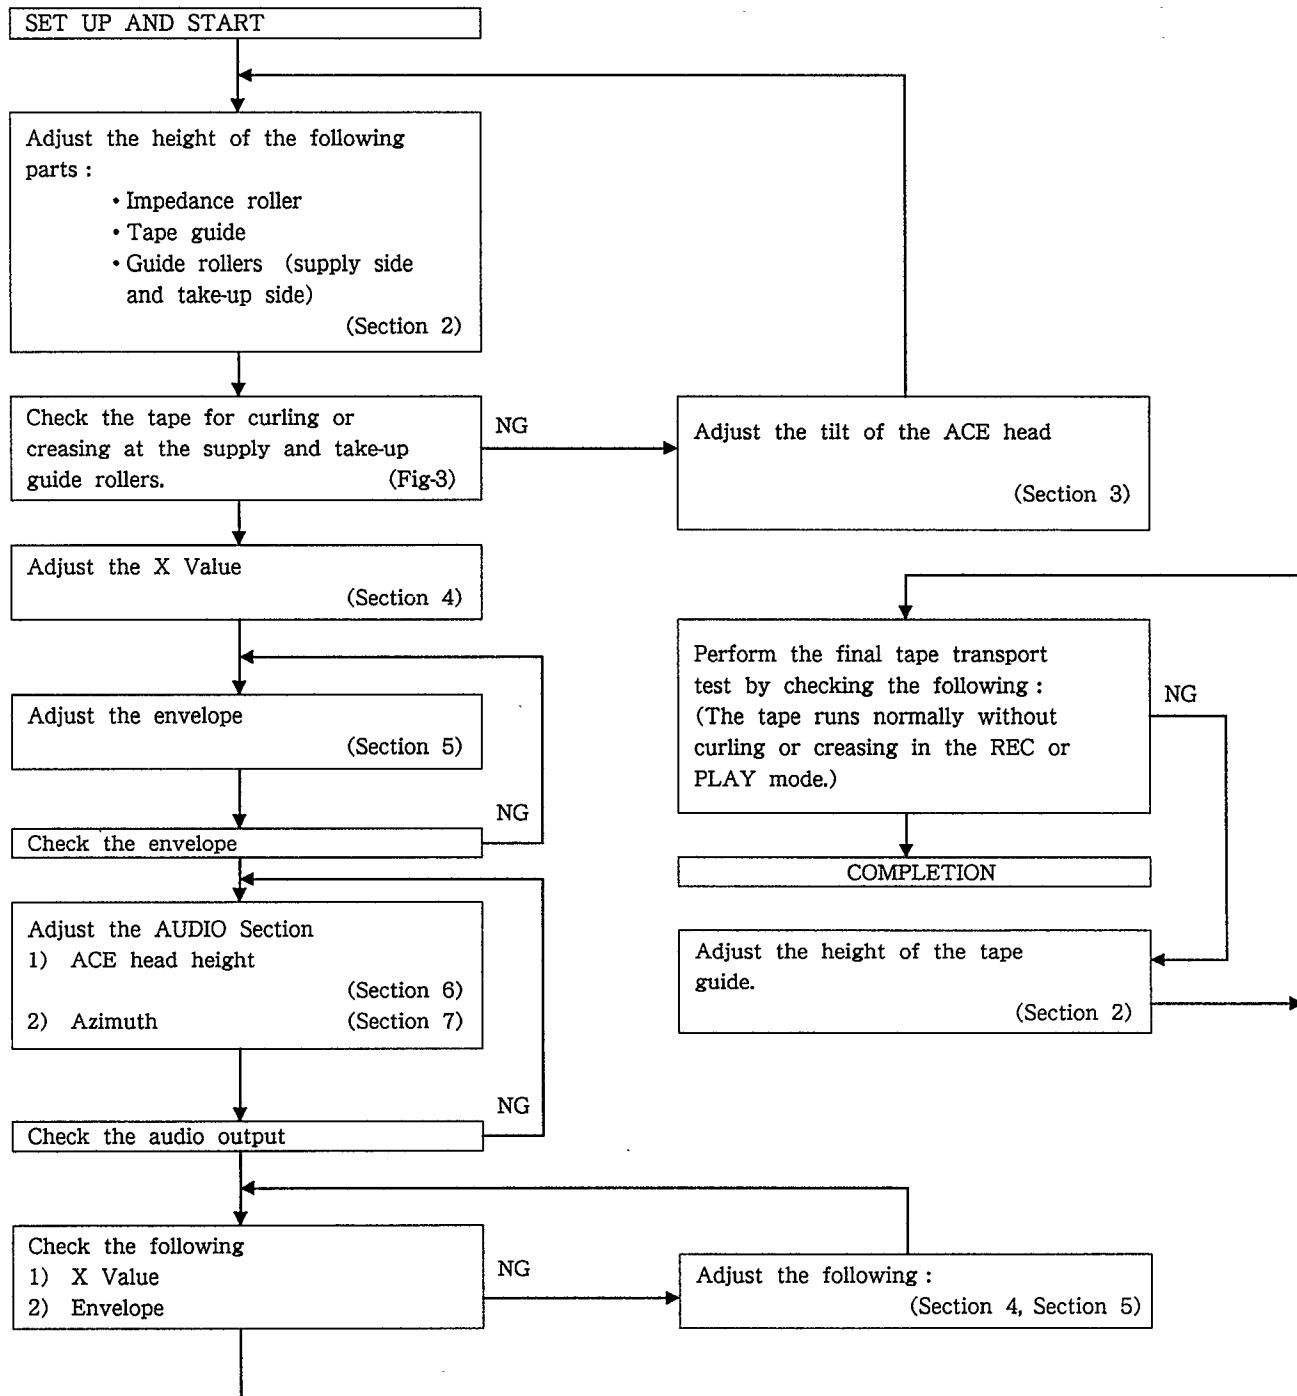

2) Play alignment tape TTV - P1.

3) Adjust SFR201 so that the V. SYNC signal is as shown in the figure below.

## 4. MECHANICAL ADJUSTMENT

### 1. TAPE TRANSPORT ADJUSTMENT FLOWCHART

## 2.TAPE RUNNING POSITION ADJUSTMENT

(GUIDE ROLLER/TAPE GUIDE/IMPEDANCE ROLLER)

### Set - up

Lift the "Main circuit board".

1. Perform the height adjustment for the following items to obtain the proper tape running position. (See Figure – 1)

- ① Impedance roller
- ② Guide roller (Supply side)
- ③ Guide roller (Take-up side)
- ④ Tape guide

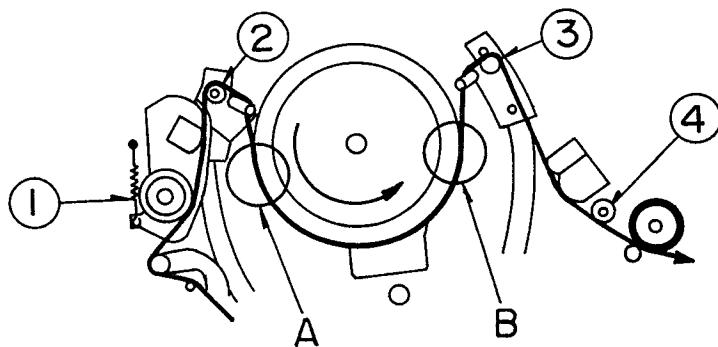

Fig. – 1

2. Load a blank tape and set it to the PLAY mode. Check the tape transport at points "A" and "B" as shown in Figure – 1.

3. Operate it between the PLAY and STOP modes several times.

4. Observe the tape transport at the "Lead surface of the cylinder" during the PLAY mode, and confirm that the tape runs smoothly along the "Lead surface of the cylinder" without slipping downward or upward. (See Figure – 2)

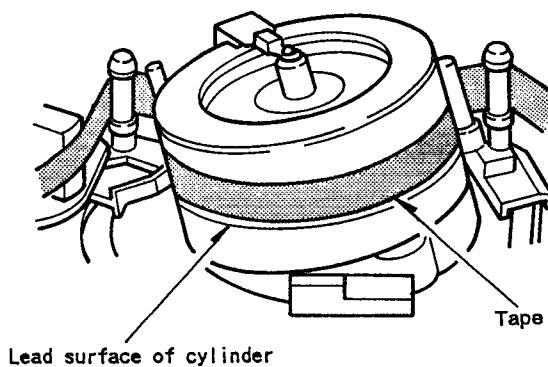

Fig. – 2

5. During loading, play and unloading, observe the tape at the supply and take-up "Guide rollers", "Tape guide" and "Impedance roller". Confirm that there is no curling or creasing etc., as shown in Figure - 3.

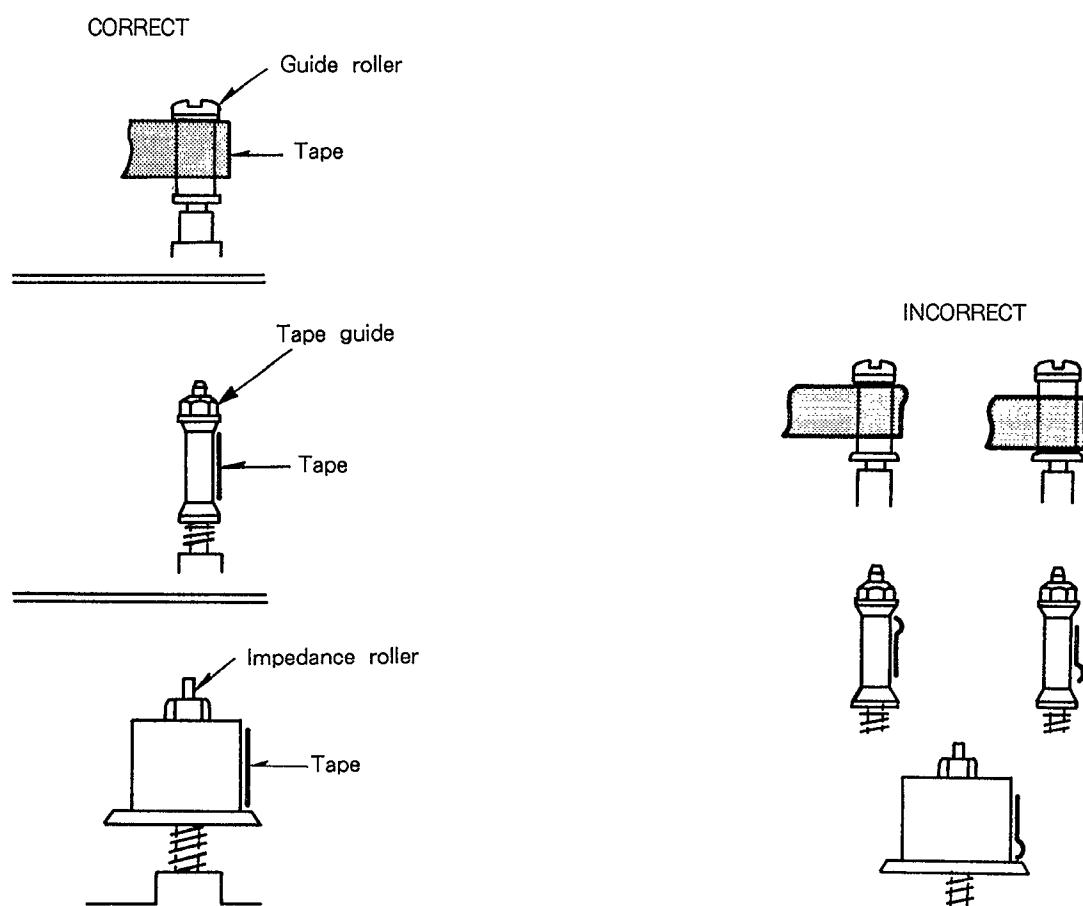

Fig. - 3

6. If any curling or creasing is noted, adjust "Tape guide roller" and "Impedance roller" first. In this case, adjust the "Impedance roller" in both PLAY and REV modes so that the tape runs as shown in Figure - 4.

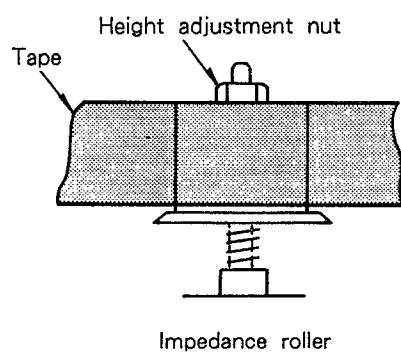

Fig. - 4

7. Next, adjust the "Guide roller" height. Insert the adjustment driver (J2) into the "Guide roller" top.

(See Figure - 5)

Adjust the height by turning the driver slightly so that the tape runs on the "Guide roller" as shown in Figure - 3,

and the lower edge of the tape runs along the "Lead surface of the cylinder".

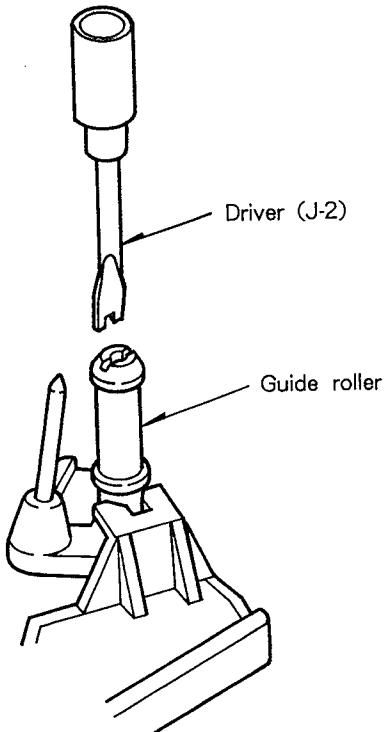

Fig. - 5

8. After completion of the supply side "Guide roller" adjustments, adjust "Tape guide" so that tape runs as shown in Figure - 6 and adjust the take-up side "Guide roller" by using the same procedures as for the supply side adjustments.

In this case, adjust the "Guide roller" height first.

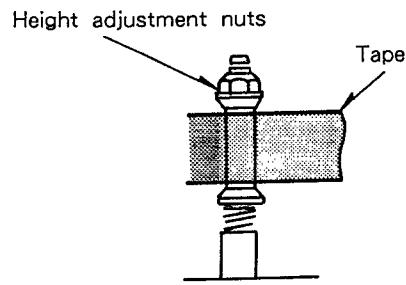

Fig. - 6

9. Confirm that there is no curling or creasing at the "Impedance roller" (Both PLAY and REV modes). If there is any curling or creasing at the "Impedance roller", adjust the same procedures of Figure - 6.

10. Finally, confirm that there is no curling or creasing at the take-up side guide roller and tape guide. If there is any curling or creasing between the take-up side "Guide roller" and the "ACE head", adjust the "ACE head".

### 3.AUDIO CONTROL HEAD ADJUSTMENT

1. Load a recorded tape and set the it to PLAY mode.
2. Adjust the height of the edge of the "Audio track" on the "Audio control head" by using the height adjustment nut (A) and the "Tilt adjustment screw" (C) so that the tape transport is smooth at the "Take - up guide pole". Align the "Audio control head" height. (See Figure - 7)

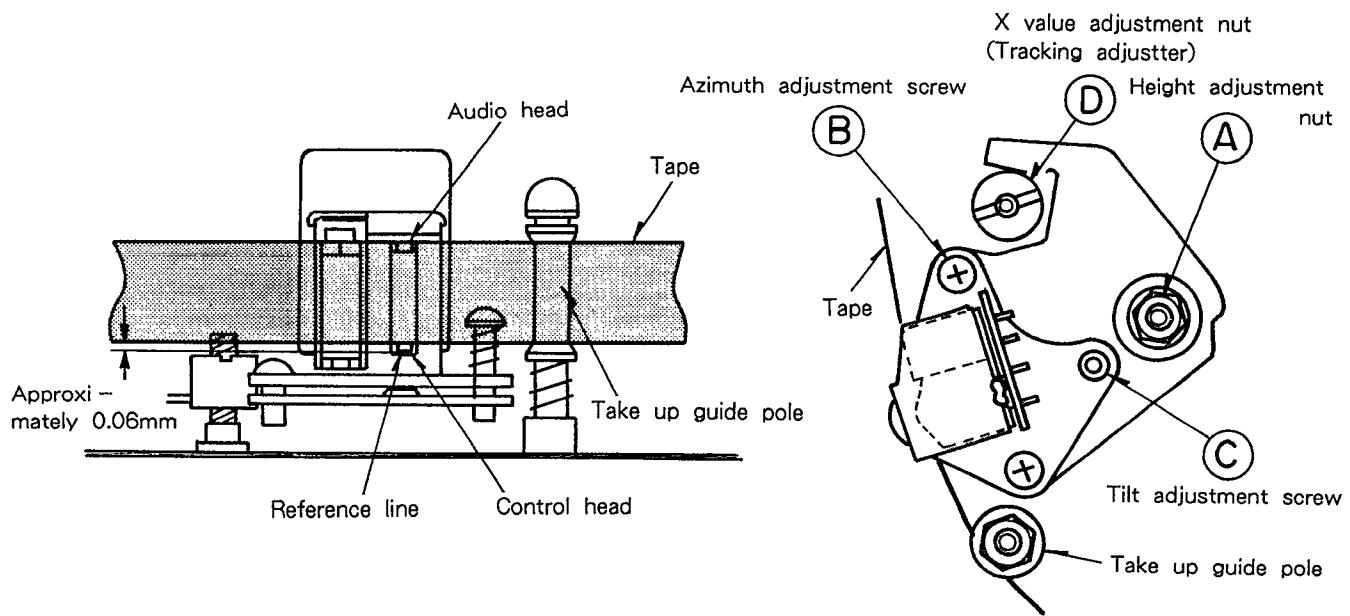

Fig. - 7

3. The fine adjustment is not required at this time.

The following conditions as sufficient :

- (a) Proper tape transport between the "Audio control head" and the "Take - up guide pole".
- (b) Stable SERVO system operation (proper pickup of tape's recorded control signal).

## 4.X VALUE ADJUSTMENT (PB FM PEAK ADJUSTMENT)

### MEASURING METHOD

Measuring Point	Measuring Equip.	ADJ. Condition
MAIN C.B IC411 26 pin SERVO/SYSCON C.B TP201 2 pin	Oscilloscope	PLAY (SP) MODE Test tape TTV-P2
ADJ. Location	ADJ. Value	
X value adjustment nut	Maximum level (CH1 PB Y FM signal)	

### TEST EQUIPMENT CONNECTING DIAGRAMS

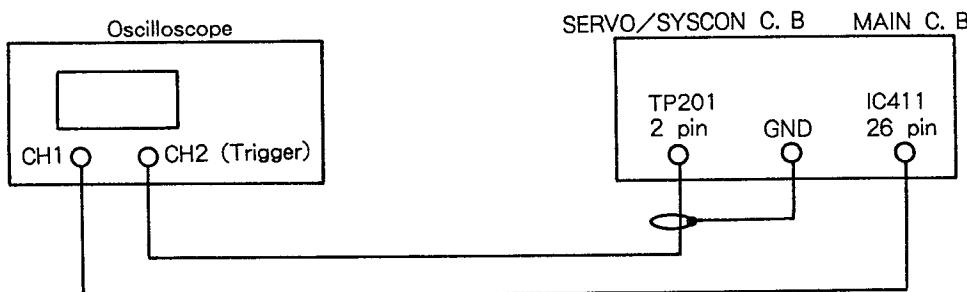

Fig.- 8

1. Connect the equipment as shown in Figure - 8.
2. Adjust RV901 (Tracking volume) to its center position. (clockwise)
3. Adjust the "X value adjustment nut" (D) for maximum PB FM Signal for CH1 by using TTV - P2 test tape.  
(See Figure - 9)
4. After adjusting the "X value", check that the output level of the PB FM Signal for CH1 changes symmetrically by rotating RV901 (Tracking volume).

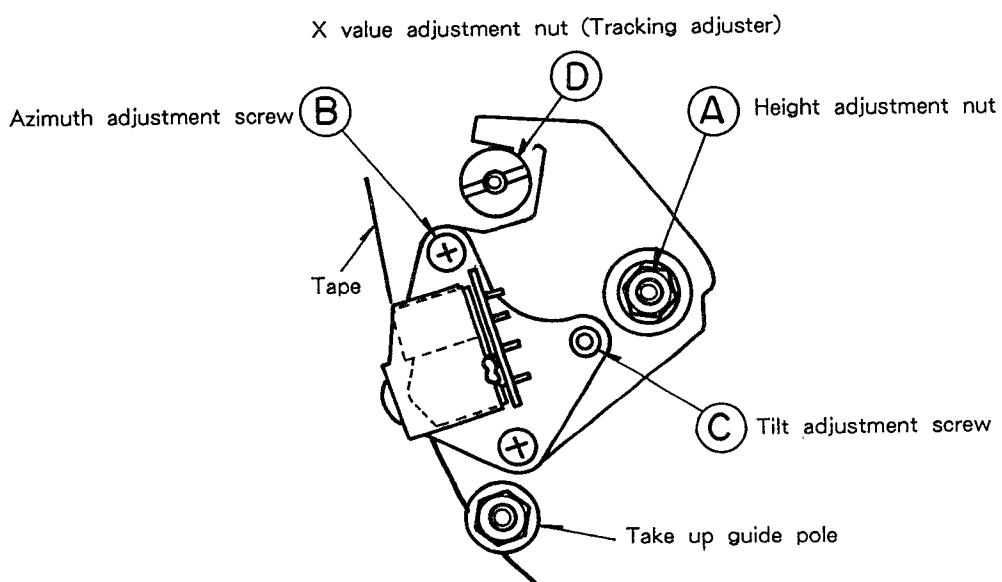

Fig.- 9

## 5.ENVELOPE WAVE FORM ADJUSTMENT

### MEASURING METHOD

Measuring Point	Measuring Equip.	ADJ. Condition
MAIN C.B IC411 26 pin SERVO/SYSCON C.B TP201 2 pin	Oscilloscope	PLAY (SP) MODE Test tape TTV-P2
ADJ. Location	ADJ. Value	
Guide rollers	Maximum level and correct wave form (PB Y FM Signal)	

### TEST EQUIPMENT CONNECTING DIAGRAMS

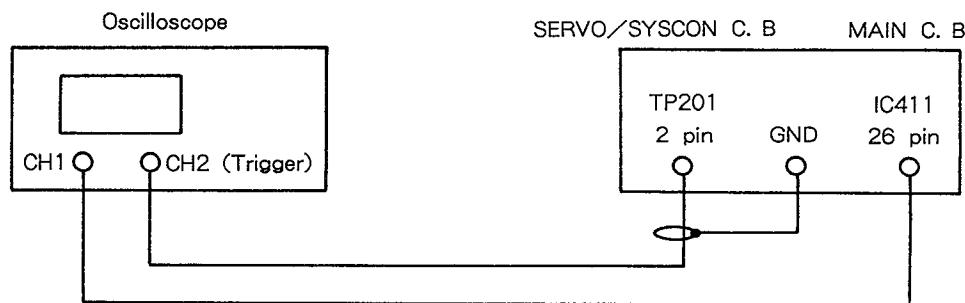

Fig. - 10

1. Connect equipment as shown in Figure – 10.
2. Playback the test tape TTV – P2.
3. The envelope wave form can be performed by adjusting the height of both the supply side and take – up side "Guide rollers". Finally adjust the height of "Guide rollers" so that the envelope wave form is as flat as possible.
4. Set RV901 (Tracking Volume) to its center position and confirm that a nearly maximum level is obtained. Then rotate the RV901 (Tracking Volume) in both directions while adjusting the height of "Guide rollers", in order to obtain the envelope wave form which is as flat as possible. If the tape is above or lower the helical tape position, the envelope wave forms will take the shape as shown in Figure – 11 and Figure – 12.
5. Adjust for maximum flatness of the envelope wave form according to the Figure – 11 and Figure – 12.
6. After adjustment, rotate RV901 (Tracking Volume) counterclockwise and clockwise, and check that the wave form changes symmetrically.
7. Check the tape curl. (Refer to Section 2)

	Tape is too high	
	Supply side	Take-up side
When the tracking volume is rotated counterclockwise and clockwise directions.		
		
Adjustment	Supply side "Guide roller" rotated clockwise direction (lowers "Guide roller") to flatten envelope.	Take-up side "Guide roller" rotated clockwise direction (lowers "Guide roller") to flatten envelope.

Fig.-11

	Tape is too low	
	Supply side	Take-up side
When the tracking volume is rotated counterclockwise and clockwise directions.		
		
Adjustment	Supply side "Guide roller" rotated counterclockwise direction (raises "Guide roller") to flatten envelope.	Take-up side "Guide roller" rotated counterclockwise direction (raises "Guide roller") to flatten envelope.

Fig.-12

## 6.AUDIO CONTROL HEAD HEIGHT/AUDIO CONTROL HEAD TILT ADJUSTMENT

### MEASURING METHOD

Measuring Point	Measuring Equip.	ADJ. Condition
AUDIO OUTPUT	Oscilloscope AC voltmeter	PLAY (SP) MODE Test tape TTV-P1
ADJ. Location		ADJ. Value
Height adjustment nut Azimuth adjustment screw		Maximum level (AC voltmeter)
Tilt adjustment screw		

### TEST EQUIPMENT CONNECTING DIAGRAMS

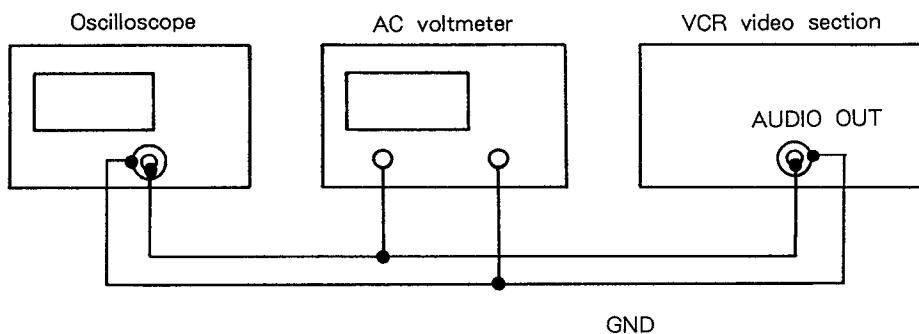

Fig.- 13

1. Connect equipment as shown in Figure - 13.
2. Confirm that the running between the "Take-up guide roller" and the "ACE head" has no slack. If the tape has slack, take it up by turning the "Tilt adjustment screw (C)". (See Figure - 15)  
Then readjust "Guide roller" height in section 2 and the "X value" in section 4.
3. After confirming on the oscilloscope that a 1kHz audio signal is being output by playing back TTV - P1 test tape, adjust the "Height adjustment nut (A)" so that the AC voltmeter's reading is brought to its maximum level. (See Figure - 7)
4. Adjust the "Azimuth adjustment screw (B)" so that the AC voltmeter's reading is brought to its maximum level. (See Figure - 7)

## 7.AUDIO CONTROL HEAD AZIMUTH ADJUSTMENT

### MEASURING METHOD

Measuring Point	Measuring Equip.	ADJ. Condition
AUDIO OUTPUT	Oscilloscope AC voltmeter	PLAY (SP) MODE Test tape TTV - P2
ADJ. Location		ADJ. Value
Azimuth adjustment screw		Maximum level (AC voltmeter)

Fig.-14

### TEST EQUIPMENT CONNECTING DIAGRAMS

See Figure - 13.

- After confirming on the oscilloscope that a 6kHz audio signal is being output by playing back TTV - P2 test tape, adjust the "Azimuth adjustment screw (B)" so that the AC voltmeter's reading or oscilloscope wave form is brought to its maximum level. (See Figure - 15)

Note : Fix the screw (B) and (C) with lock paint after readjustment.

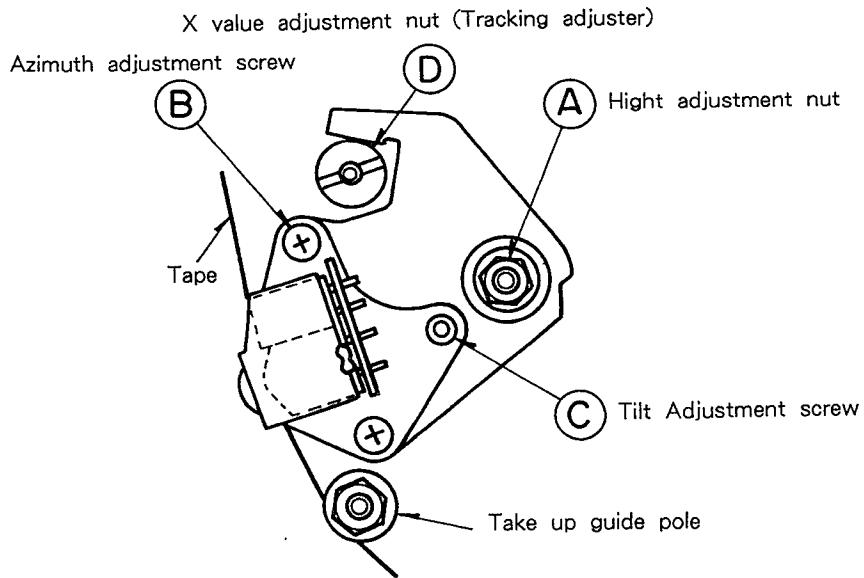

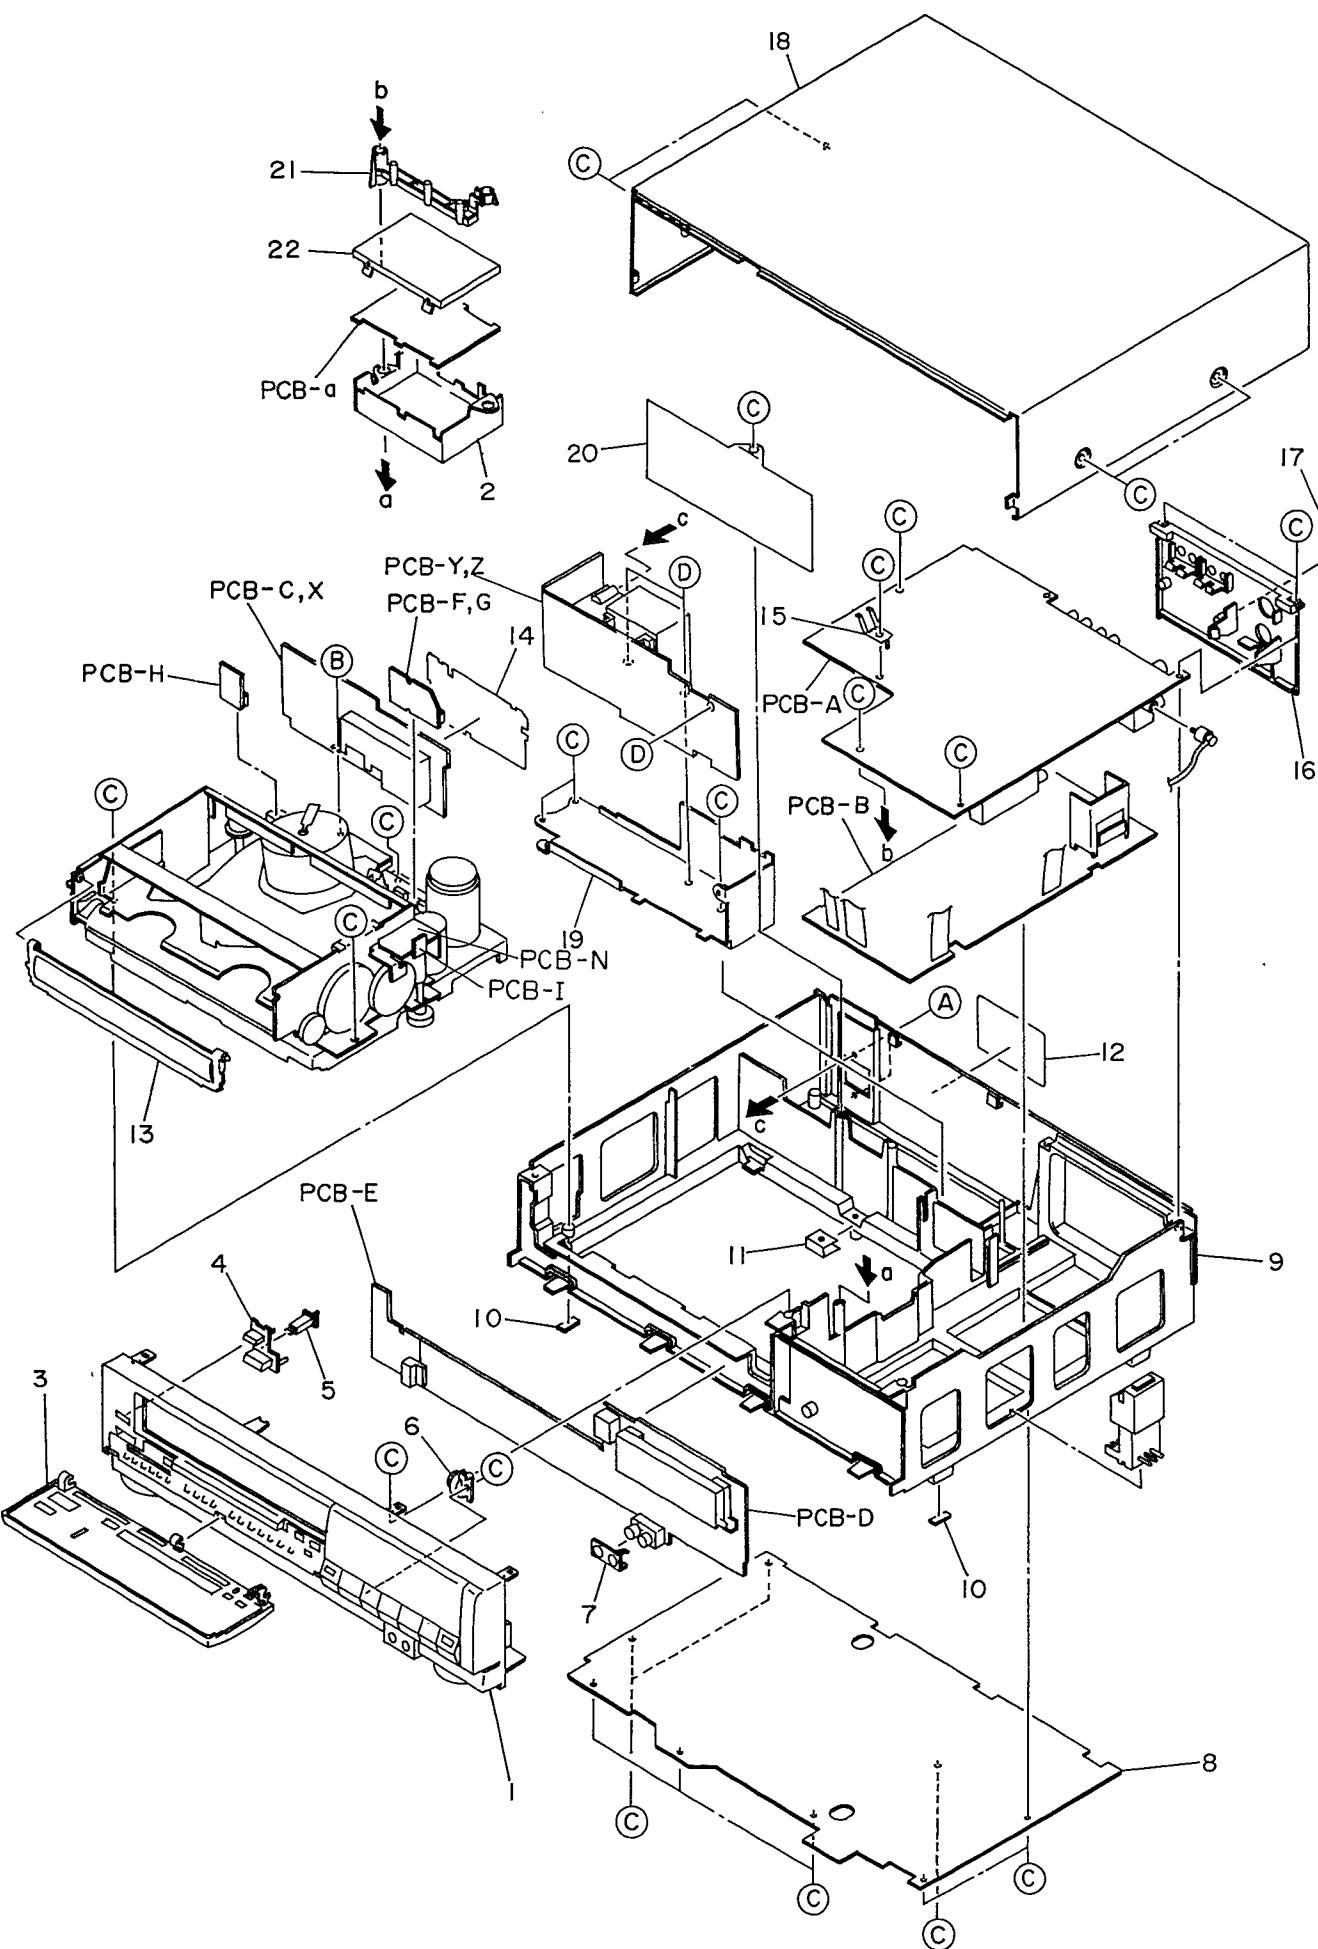

Fig.- 15

SCHEMATIC DIAGRAM – 3 (TUNER SECTION)

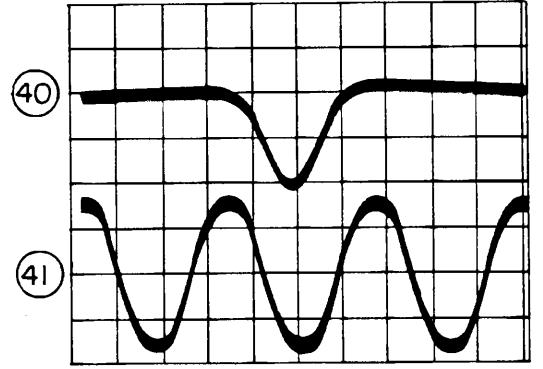

## WAVE FORM - 1 (SERVO WAVE FORM)

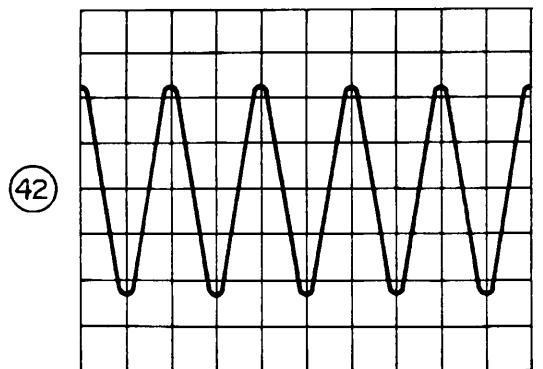

1. DRUM PG AND FG  
Lower : DRUM PG AC 0.1V/div.  
(IC203 pin ⑯)  
Lower : DRUM FG AC 50mV/div.  
(IC203 pin ⑰)  
Time 5ms/div.

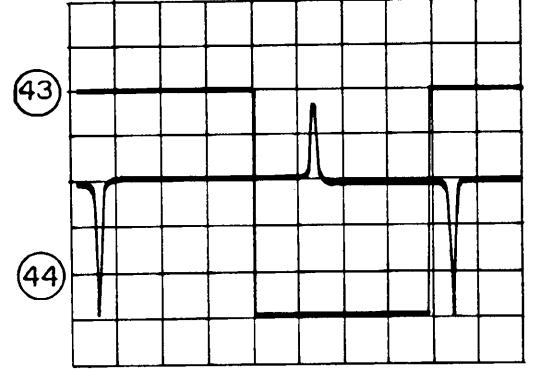

2. DRUM PG AND FG  
Enlargement of 1  
The PG pulse (upper) is generated (either positive or negative) when the FG pulse (lower) is a negative half wave.

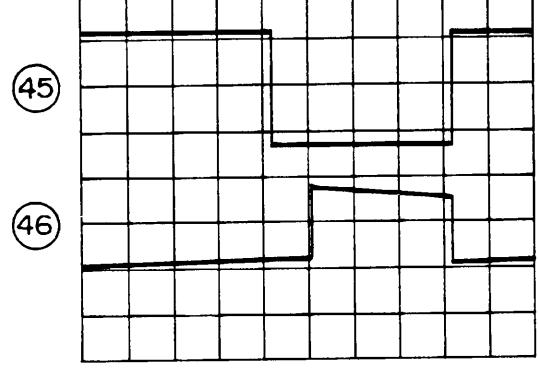

3. CAPSTAN FG (IC203 pin ⑯)  
AC 0.1V/div.  
Time 1ms/div

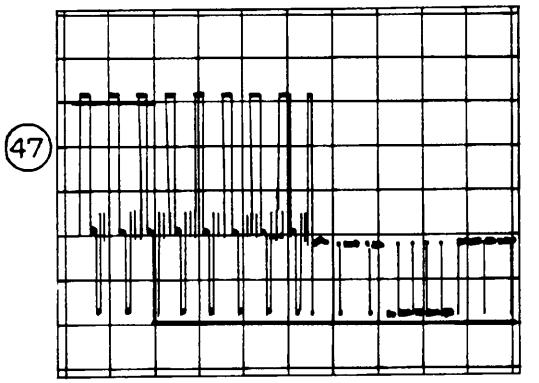

4. RF SW PULSE AND CTL (PB MODE)  
RF SW PULSE DC 1V/div. (IC203 pin ⑩)  
CTL AC 0.5V/div. (IC203 pin ㉑)  
Time 5ms/div.  
The CTL pulse (negative) is  $2.3 \pm 0.3$ ms from the leading edge of the RF SW pulse.

5. RF SW PULSE AND CTL (REC MODE)  
Upper : RF SW PULSE DC 2V/div.  
(IC203 pin ⑩)  
Lower : CTL AC 2V/div.  
(IC203 pin ㉑)  
Time 5ms/div.

6. RF SW PULSE AND VIDEO OUT  
RF SW PULSE DC 1V/div. (IC203 pin ⑩)  
Video out (OPEN) AC 0.5V/div.  
Time 0.1ms/div.  
The RF SW pulse rises or falls 5~8H (320~512 μs) before the VD (vertical sync) signal in the video signal.
