SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

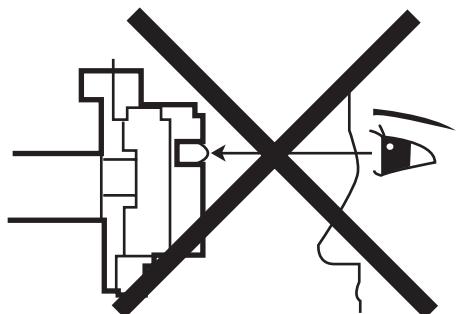

AC Leakage Test

LASER BEAM SAFETY PRECAUTIONS

CLASS 1 LASER PRODUCT

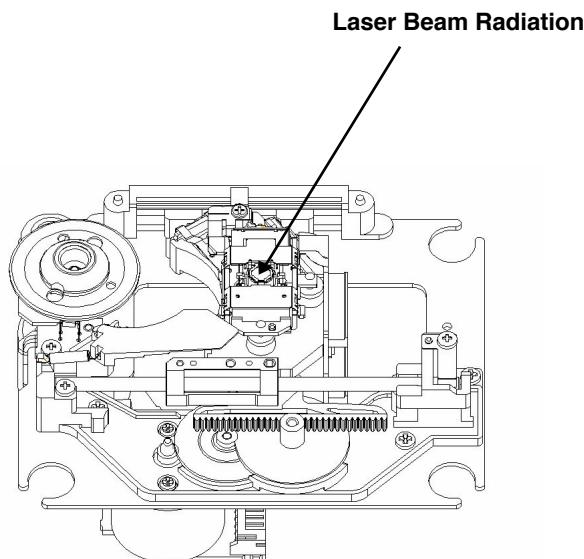

DANGER
INVISIBLE LASER RADIATION
AVOID DIRECT EXPOSURE TO BEAM

Do not look directly at the laser beam coming from the pickup or allow it to strike against your skin.

This Receiver uses a pickup that emits a laser beam.

The laser beam is emitted from the location shown in the figure. When checking the laser diode, be sure to keep your eyes at least 1 foot away from the pickup lens when the diode is turned on. Do not look directly at the laser beam.

Caution: Use of controls and adjustments, or doing procedures other than those specified herein, may result in hazardous radiation exposure.

HANDLING LASER PICKUP

The laser diode in the optical system of this receiver can be damaged by electrostatic discharge from clothes, body, etc. Proper electrostatic grounding for service personnel is required during servicing.

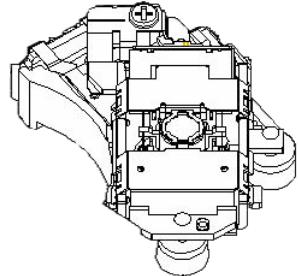

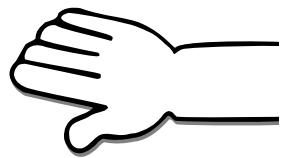

BEFORE REPAIRING THE DVD MECHANISM

a. Human Body Grounding:

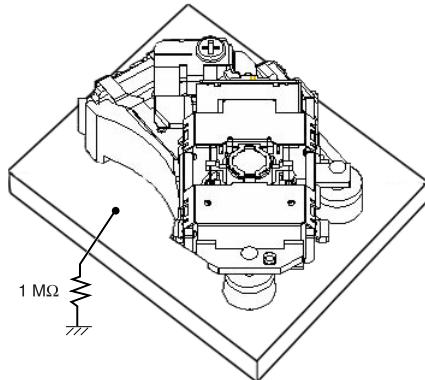

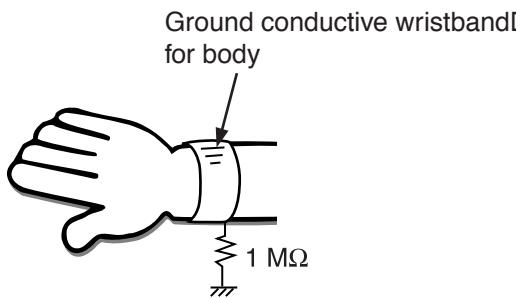

Many of the components used in this compact disc player, including the laser pickup, are sensitive to electrostatic discharge.

Service personnel should be grounded with an electrostatic armband (1M ohm).

INCORRECT

CORRECT

Caution: Static charge on clothing does not escape through a body grounding wristband. Be careful not to contact the pickup or electrical components with your clothing.

b. Workbench and Tool Grounding:

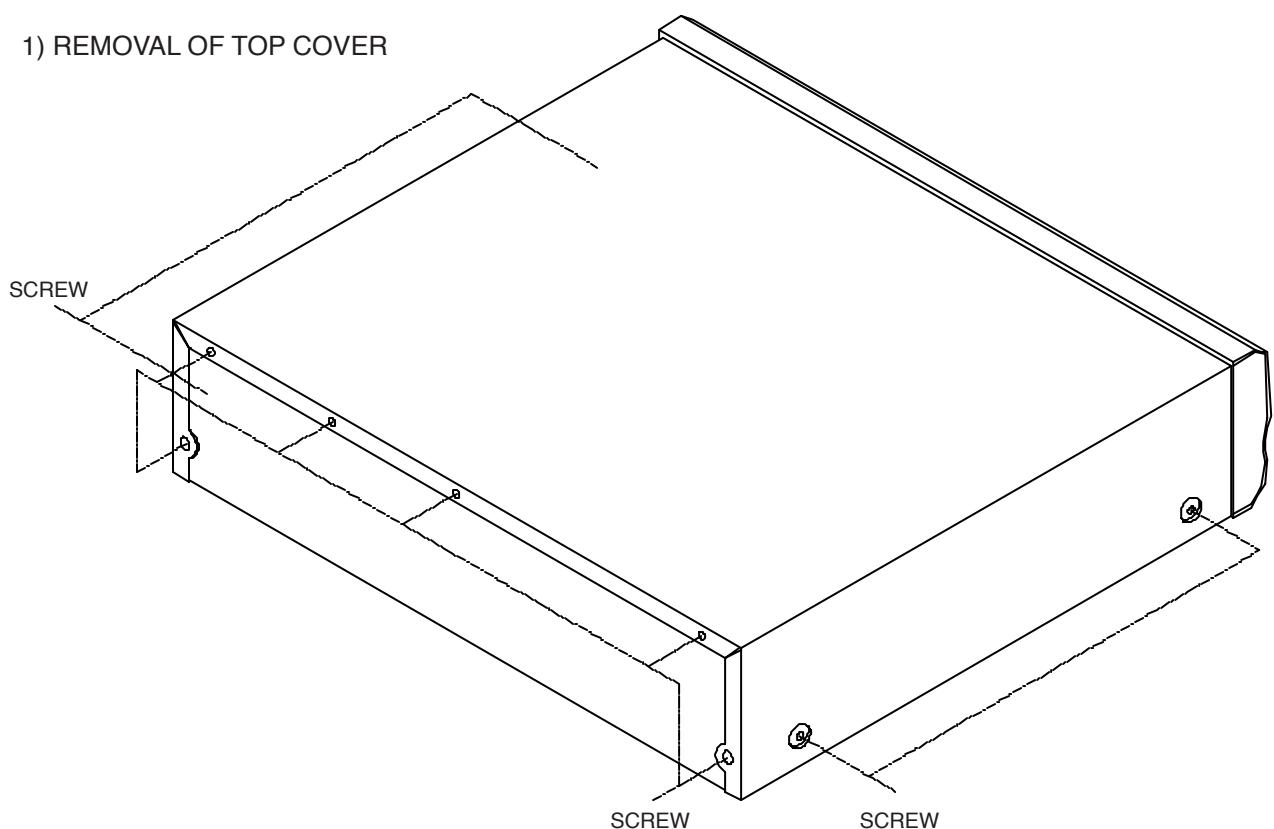

A properly-grounded electroconductive plate (1 M ohm) or metal sheet should be fitted to the workbench surface. Tools and instruments (soldering irons, scopes, etc.) should be grounded to prevent AC leakage.

c. Make two standard ESD solder bridges on the Laser optic PC Board

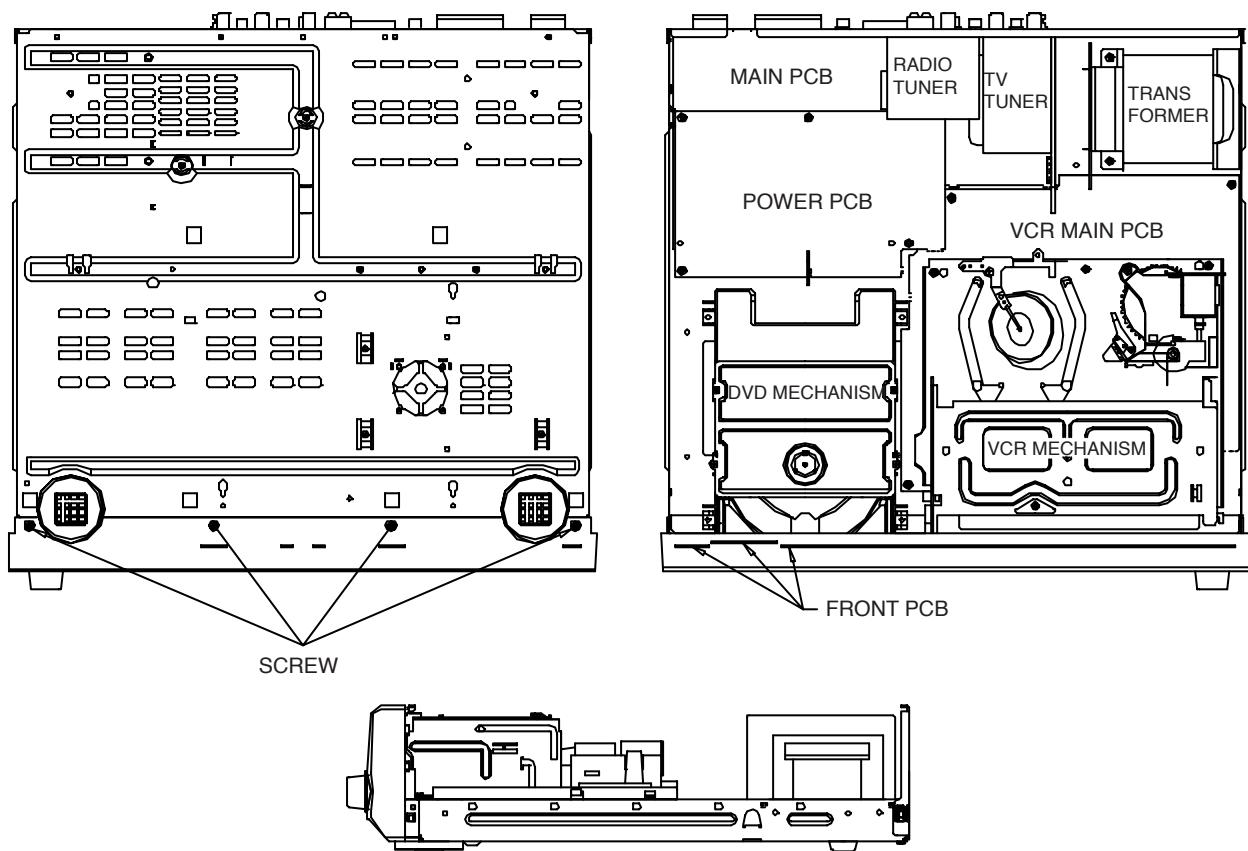

Before disassembly of mechanism or disconnect any cables in it, make two standard ESD solder bridges on the laser optic PC Board.

TROUBLE SHOOTING

Incorrect operation is often mistaken for trouble and malfunctions. If you think that there is something wrong with this component, check the points below. Sometimes the trouble may lie in another component. Investigate the other components and electrical appliances being used.

Symptom	Cause	Remedy
No power.	The power cord is disconnected.	Plug the power cord into the wall outlet securely.
The power is on, but the DVD player does not work.	No disc is inserted.	Insert a disc. (Check that the DVD or audio CD indicator in the DVD display is lit.)
No picture.	The TV is not set to receive DVD signal output.	Select the appropriate video input mode on the TV so the picture from the DVD player appears on the TV screen.
	The video cable is not connected securely.	Connect the video cable into the jacks securely.
	The connected TV power is turned off.	Turn on the TV.
The playback picture is poor.	The disc is dirty.	Clean the disc.
The DVD player does not start playback.	No disc is inserted.	Insert a disc. (Check that the DVD or CD indicator in the display panel is lit.)
	The DVD player cannot read the disc because it is damaged or an incorrect type (for example, a CD-i).	Check the disc type, color system and regional code. Check for any scratches or smudge on the disc. Insert a readable disc.
	The disc is placed upside down.	Place the disc with the playback side down.
	The disc is not placed within the guide.	Place the disc on the disc tray correctly inside the guide.
	The disc is dirty.	Clean the disc.
	A menu is on the TV screen.	Press SETUP to turn off the menu screen.
	The rating level is set.	Cancel the rating function or change the rating level.
The remote control does not work properly.	The remote control is not pointed at the remote sensor of the unit.	Point the remote control at the remote sensor of the unit.
	The remote control is too far from the unit.	Operate the remote control within about 23 feet (7 m).
	There is an obstacle in the path of the remote control and the DVD player.	Remove the obstacle.
	The remote's batteries are exhausted.	Replace the batteries with new ones.
	Other function is selected.	Press the function key what you want to operate.

Symptom	Cause	Remedy
The receiver does not respond when the buttons are pressed.	Static electricity caused by dry air.	Disconnect the power plug from the outlet, and insert again.
No sound is output when a function is selected.	Improper connections	Make sure the component is connected correctly.
	Sound is muted.	Press the remote's MUTE.
	The volume is turned down.	Adjust VOLUME
No image is output when a function is selected.	Improper connections.	Make sure the component is connected correctly.
	The input source is not properly selected.	Press the correct function button.
Considerable noise in radio broadcasts.	Incorrect frequency.	Tune in the correct frequency.
	The antenna is not connected.	Connect the antenna.
	DIGITAL RF (AC-3) and/or digital cables are near the antenna terminals and wires.	Route DIGITAL RF (AC-3) and digital cables away from the antenna terminals and wires.
	(For FM) The FM antenna is not fully extended or is poorly positioned.	Fully extend the FM wire antenna, position for best reception, and secure to a wall.
	(For FM) The signal is weak.	Connect an outdoor FM antenna.
	Interference caused by other equipment (for example, fluorescent lights, motors).	Turn off the equipment causing the noise or move it away from the receiver.
		Place the antenna farther away from the equipment causing the noise.
Broadcast stations cannot be selected automatically.	The signals are weak.	Connect an outdoor antenna.
The display is dark.	The dimmer or sleep timer are on.	Press DIMMER again.
When listening to the music in stereo, left/right speakers sounds are reversed.	Speakers are connected wrong.	After checking, if needed, reconnect.
Low hum or buzz sound.	Power line of a fluorescent light is installed near the receiver.	Place the receiver as far away as possible from electric devices with interference.
Sound is only heard from one channel.	One of the input cords is disconnected.	Connect the input cords securely.
	The channel level is set to one side.	Adjust the channel level.
Sound cuts off or there is no sound even though power is on.	Speaker impedance is less than prescribed for this unit.	After turning off the power and then turning it on again, reduce the volume or change to the correct 6-ohm speakers.
Low bass response.	Speaker polarity(+-) is reversed.	Check all speakers for correct polarity.

■ TEST MODE

TEST Mode shows the infomation as follows.

- II. Front End Version (It is to display the Mecha Firmware version number.)
- III. Back End Build time (It can be used to seperate each B/E firmware version by the day.)
- IV. Region No.(It is only to display region code.)

[operation]

To enter the first state of test mode, first open DISC. (Press OPEN key.)

then, press key on the remote unit as follows.

[CLEAR] - [2] - [5] - [8] -[0] - [CLEAR]

If you press key correctly, you will see the message below.

BE VER	MODEL No.	- (I : B/E version)
FE VER	61-500101	- (II : F/E version)
BUILD TIME	20030510B	- (III : B/E bulid time)
REGION	xx	- (IV : Region Number)

<B/E Firmware update> : Function 2

The update is done with CD-R. (When the firmware is changed, the updated firmware will be provided by Anam on CD-R)

Put the DISC in at the first state of service mode and then press the PRGM key on the remote unit.

Updating will begin as follows.

ERASE -> WRITE -> DONE

You'll see the update sequence on the TV screen.

ERASE >>>>>>>
WRITE >>>>>>>>
DONE

When the TV screen's display goes off, turn the POWER OFF.

Turn the POWER ON and then DO EEPROM CLEAR.

<F/E Firmware update> : Function 3

The update is done with CD-R. (When the firmware is changed, the updated firmware will be provided by Anam on CD-R)

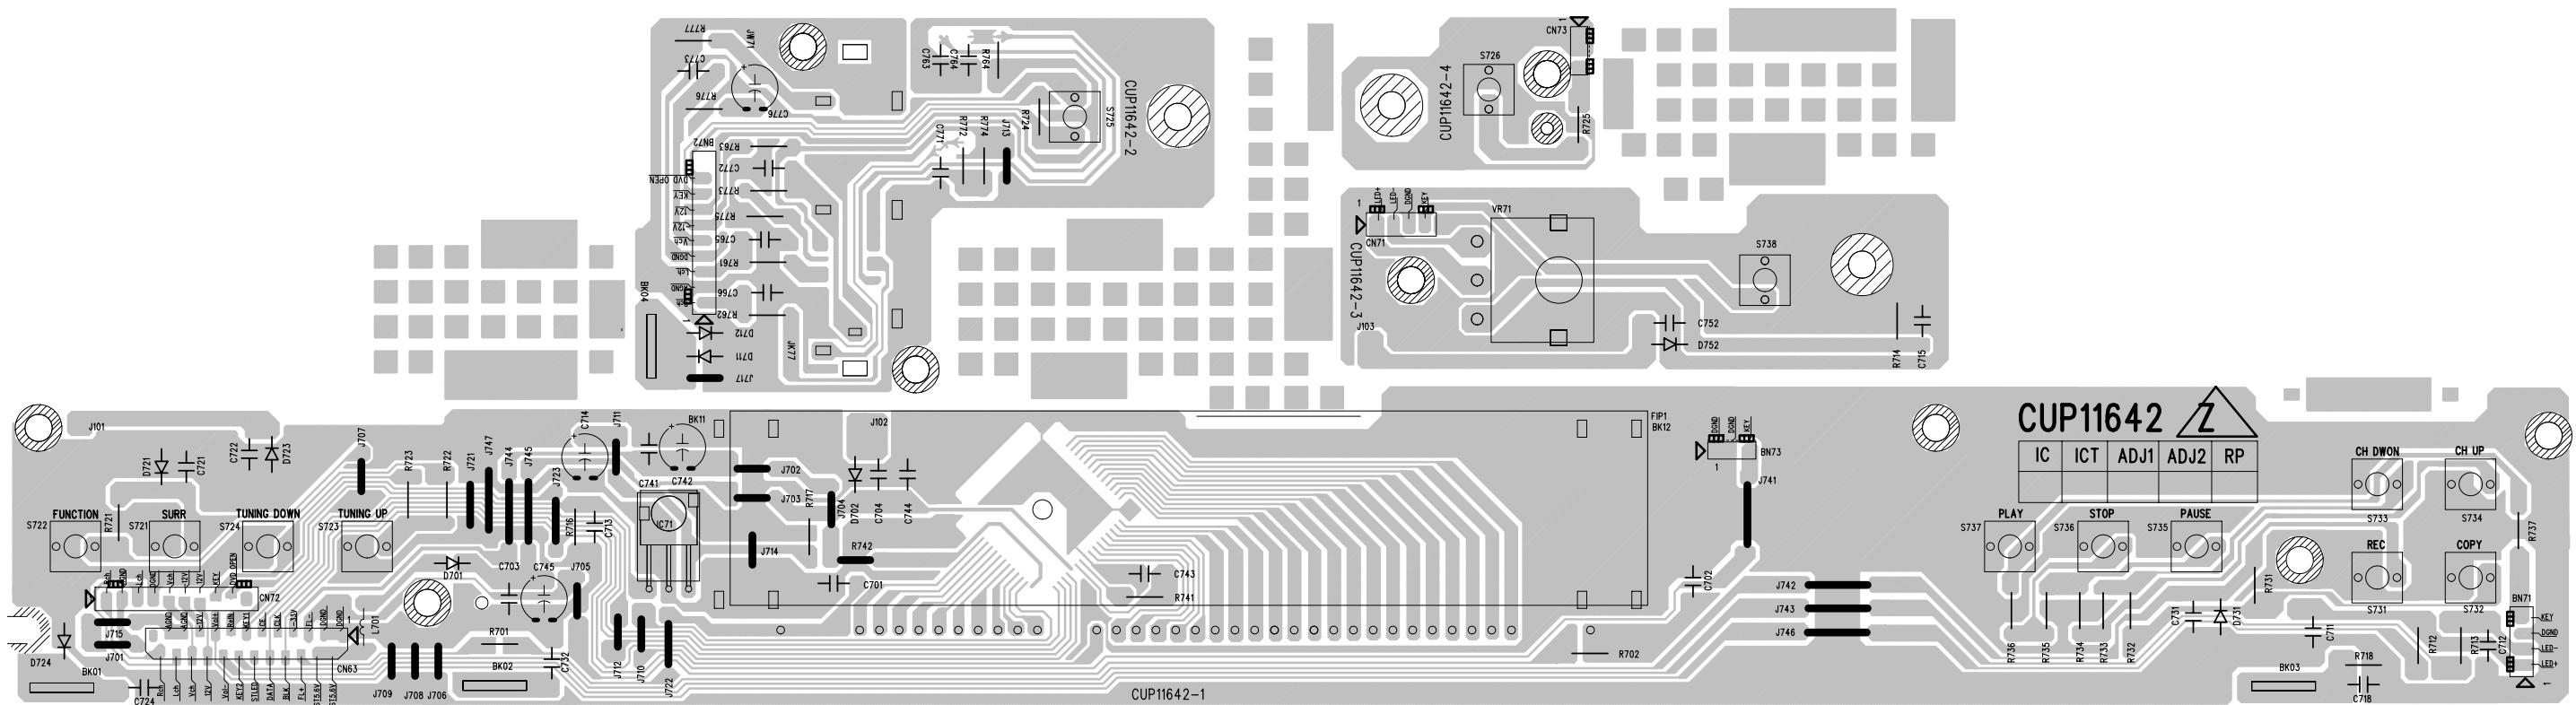

- Put the disc on OPEN at normal operation mode.
- Press PLAY on the remote.
- After about 30 seconds, DVD door will be open.
- Turn the power off.
- Turn the power on and open DISC
- Remove the disc.

Note: F/E update method has another method. It is that you can update in the normal mode, same sequence, same method. Updating in the normal mode is recommandable because of updating during the short time. In this case, you must confirm the F/E firmware version.

ADJUSTMENT OF TAPE TRANSPORTING SYSTEM

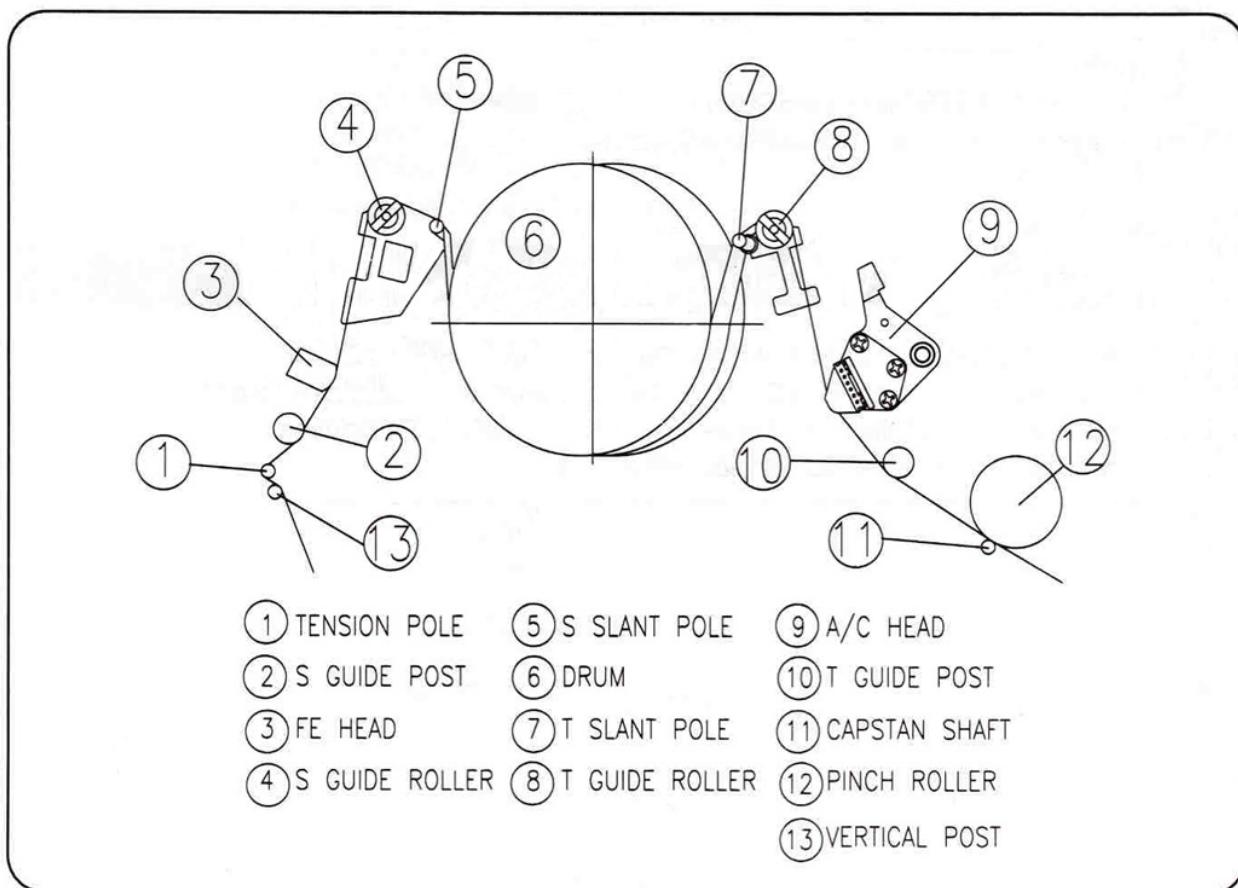

Fig. 1 THE SCHEMATIC DIAGRAM OF TAPE TRANSPORTING SYSTEM

DRUM ENTRANCE/EXIT

*Measuring Point:J151(Head S/W Pulse)

J150(TEST Envelope)

*Adjust Point:S/T Guide Roller

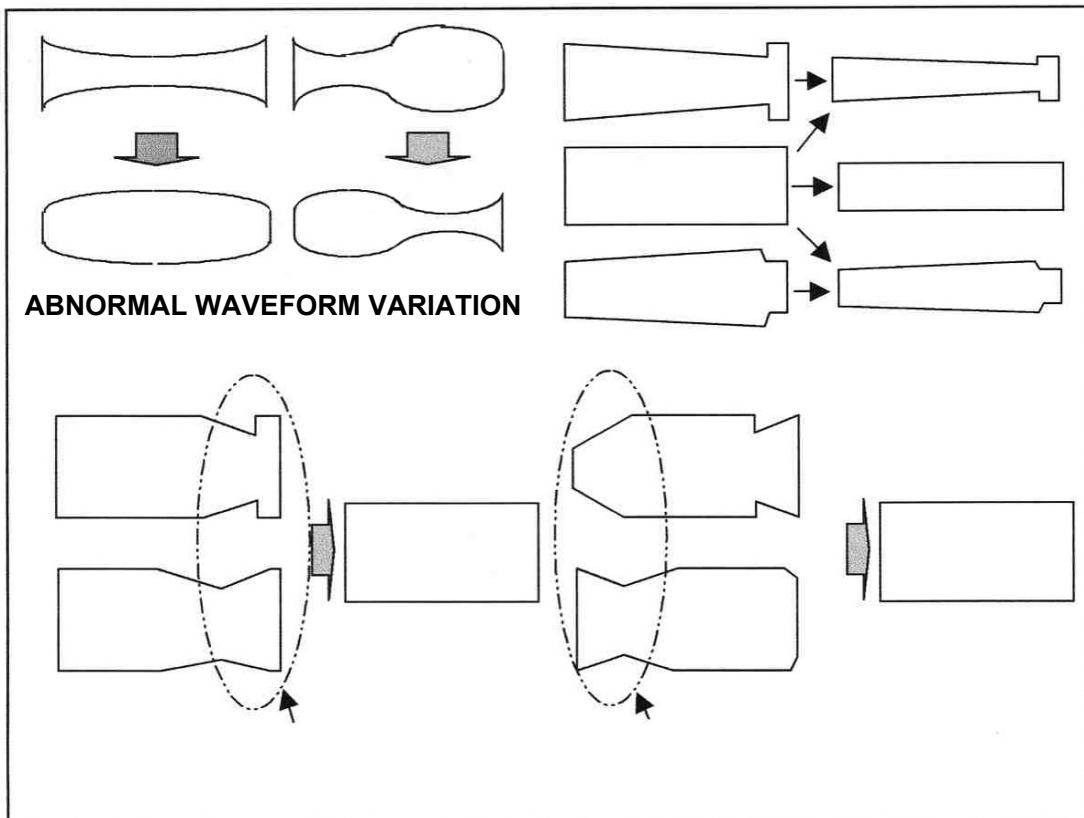

- 1) Connector the channel-1 scope probe to the Head S/W Pulse Test pin(J151).
- 2) Connector the channel-2 scope probe (1V/div.)to the Video Envelope Test Pin(J150).
- 3) Playback the Alignment Tape(Color Bar Signal OR Monoscope Signal).
- 4) Adjust X-Position(Connect Head S/W and Ch 1 of scope, CTL Pulse(J151) and Ch 2) after that insert SP mode tape into Deck.

Please adjust X-Position BOSS to be same both Timming of Ch 1/Ch 2 at initial Play and Timming after Auto-Tracking

5) Please adjust S/T Guide Roller in order to Flat Frequency of Video Envelope during the Playing.

6) Please Check the Start part and Ending Part Video Envelope Frequency During Auto tracking Function.

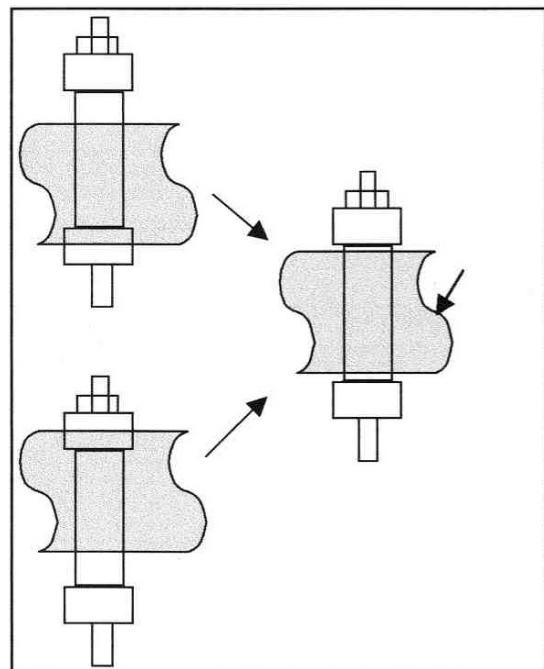

If the Frequency was not Flat,Please readjust S/T guide Roller To be Flat.

ADJUSTMENT OF THE A/C HEAD A'SSY #1

1.TILT Adjustment

- Play back T-120 Tape and check the running condition of the Tape at the lower flange of the T-guide post ass'y in fig. 1.
- adjust the a/c head tilt screw untill the Tape runs stable as shown in fig. 3.
*Measuring Point:T-guide post bottom
*Adjust Point:A/C Head Tilt Screw

2.Adjustment of the audio azimuth

- Play back Alignment Cassette Tape(sp 7kHz).
- Observe audio signals on an Oscilloscope.

- c.Turn the A/C Head Azimuth Screw to obtain the maximum audio output signal(-9~-3dBm)
 *Measuring Point:Audio output
 *Adjust Point:A/C Head Azimuth screw

ADJUSTMENT OF THE A/C HEAD A'SSY #2

- a.Platback a E-180 Tape.
 b.Make sure that the gap is 0.25mm between the lower end of Tape and that of A/C Head.
 c.When the gap is longer than 0.25mm, turn the A/C Head Height Adjust Nut counter-clockwise. When the gap is shorter than 0.25mm, turn it clockwise.
 Repeat this procedure until 0.25mm is obtained.
 *Measuring Point:Audio output
 *Adjust Point:A/C Head Nut

P.G SHIFT ADJUSTMENT

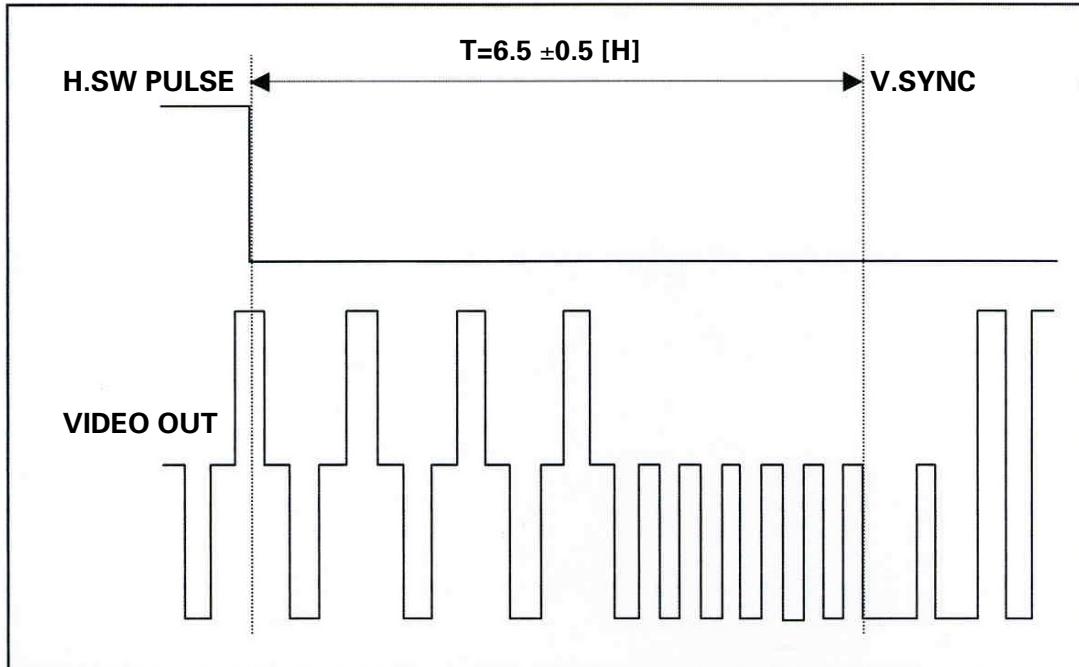

*Measuring Point:J151(Head S/W Pulse)

Video out (Main Circuit Board R527)

*Adjust Point:VR31(100K)Main Circuit Board

Phase generator(PG) shift decides the Video Head switching point. When Tape is played back in case the phase generator(PG) shifter isn't correctly tuned, Head switching noise or vertical jitter may occur.

- 1) Connector the channel-1 scope probe to the Head S/W Pulse Test pin(j151).
- 2) Connector the channel-2 scope probe(1V/div.)to the Video out(R527).
- 3) Play back the Alignment Tape (Color Bar Signal Or Monoscope signal).
- 4) Adjust the PG Volume for interval of $6.5H \pm 0.5H$.

X-POSITION

- *Measuring Point:J150(TEST Envelope)
 - *Adjust Point:X-POSITION ADJUST BOSS
- 1) Connector the channel-1 scope probe (1V/div.)to the Video Envelope Test Pin(J150).
 - 2) Playback the Alignment Tape(Color Bar Signal OR Monoscope Signal).
 - 3) Operating CH Up/Down Key of Remote Controller during Playing back Manual Tracking Center Bar OSD to br the center of Screen.
 - 4) Please Make Video Envelope Signal connected CH1 a Maximum Waveform by Adjusting X-Posion BOSS.
 - 5) Please Check Manual Tracking OSD is in the Center of Screen After Auto-Tracking.
 - 6) If the posion is misadjusted, Please repeat from 1) to 5).
