## 4 MECHANICAL CHECKS AND ADJUSTMENTS

### 4-1 PLAY SOLENOID

1. With the deck in the play mode, check that the pinch roller is pressing against the capstan shaft and that the pinch roller arm spring is released from the pinch roller arm.
2. If adjustment is required, adjust the position of the play solenoid.

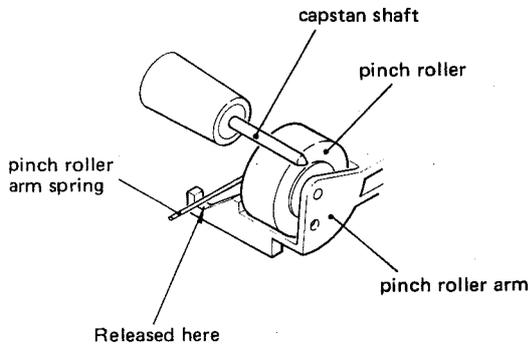

Fig. 4-1

### 4-2 PAUSE SOLENOID

1. The clearance between the pinch roller and the capstan shaft should be 0.3 – 0.5 mm when the deck is in the pause mode.
2. If adjustment is required, adjust the position of the pause solenoid.

### 4-3 PINCH ROLLER PRESSURE

1. With the cassette holder shut and no tape loaded, put the deck in the play mode after pushing the cassette-in switch sensor arm up-wards and holding it.
2. Hook a spring scale on the pinch roller assembly as shown in the illustration.
3. Pull the scale downwards until there is sufficient force to separate the pinch roller from the capstan shaft.
4. Ease pressure until the pinch roller makes just enough contact with the capstan shaft so that the pinch roller just begins to turn. At this point, note the reading on the scale. It should be from 350 g to 450 g (12.3 oz. to 15.9 oz.)

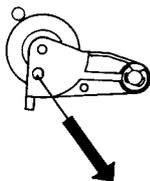

Fig. 4-2

### 4-4 REEL TORQUE

1. Load the cassette torque meter on the deck and read the pointer indication on the dial scale for each tape transport operation. The measured torque should be within the following values:  
 Take-up: 35 to 65 g-cm (0.49 to 0.90 oz-inch)  
 Supply: 2 to 4 g-cm (0.028 to 0.056 oz-inch)  
 F.F./REW: 80 to 150 g-cm (1.1 to 2.1 oz-inch)

### 4-5 TAPE SPEED

1. Connect a frequency counter to the deck as shown in Fig. 4-3.
2. Play a tape for more than five minutes to warm up the deck, then load a TEAC MTT-111 test tape containing a 3000-Hz test tone and play the test tape.
3. While the tape is playing, use a non-metallic or insulated screwdriver and adjust the control on the capstan motor for a reading of 3015 to 3025 Hz on the frequency counter.
4. Play the tape at the beginning and at the end, and check that the speed deviation is within the prescribed limits by observing that the reading on the frequency counter never deviates more than  $\pm 70$  Hz from 3000 Hz, nor drifts more than 70 Hz at any given time.

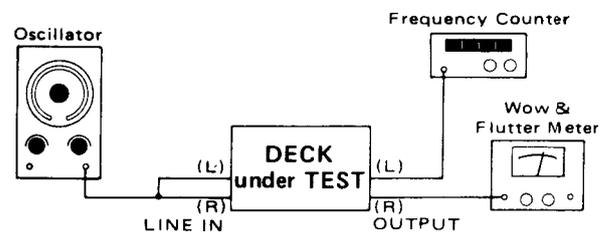

Fig. 4-3

### 4-6 WOW AND FLUTTER

**Note:** These measurements should be made at the beginning, middle, and the end of the tape.

- 1) **PLAYBACK**
  1. Connect a wow-and-flutter meter to the deck as shown in Fig. 4-3.
  2. Load and play a TEAC MTT-111 test tape.
  3. Check that the reading on the wow-and-flutter meter is within 0.06% (WRMS).
- 2) **RECORD/PLAYBACK**
  4. Load a blank TEAC MTT-501 test tape and record a 3000-Hz signal.
  5. Rewind the tape to the beginning of the recorded section, and play it.
  6. The wow and flutter should not be more than 0.25% (RMS).

**4-7 LUBRICATION**

Lubrication is only required when parts are replaced. For this purpose, use the oil and grease specified below.

Oil: TEAC spindle oil (from TEAC TZ-255 oil kit), Mobil D.T.E. Oil Light, or equivalent

Grease: ORE-LUBE G1/3 or equivalent

1. Apply a drop of oil with an oil applicator to a point about 1/3 the way down the shaft, from the free end of the flywheel, then insert the shaft into the capstan housing.
2. Apply a suitable amount of light grease to the well of the flywheel bearing.

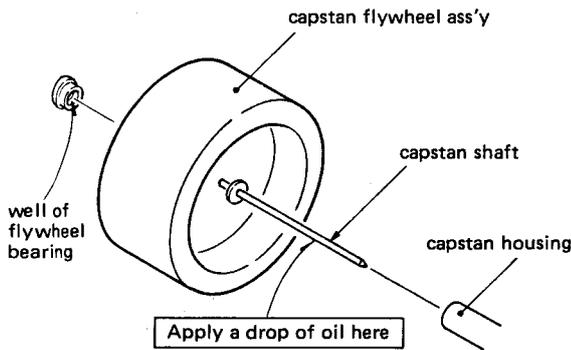

Fig. 4-4

**4-8 VOLTAGE CONVERSION  
(GENERAL EXPORT MODELS ONLY)**

1. Always disconnect the power line cord before making these adjustments.
2. Locate the voltage selector on the rear panel as shown in the illustration.
3. Using a regular screwdriver, turn the selector until the numerals corresponding to the required voltage appear.

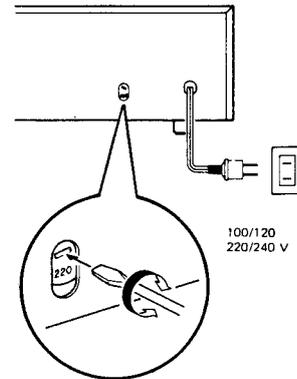

Fig. 4-5

**5 ELECTRICAL CHECKS AND ADJUSTMENTS**

**PRECAUTIONS**

1. Before performing adjustments and checks, clean and demagnetize the entire tape path.
2. Make sure the deck is properly set for the voltage in your locality.
3. In general, adjustments and checks are made in the order of L-ch then R-ch. Double REF. Nos. and test point designations indicate L-ch/R-ch. (Example: R12/22)
4. 0 dB is referenced to 0.775 V. If an AC voltmeter that references 0 dB to 1 V is used, appropriate compensation should be made.
5. The AC voltmeter used must have an input impedance of 1M-ohms or more.
6. Note the "Deck settings" at the top of each chart. The settings apply to all checks for the specific chart unless explicitly stated otherwise.

# 7 PC BOARDS AND PARTS LIST

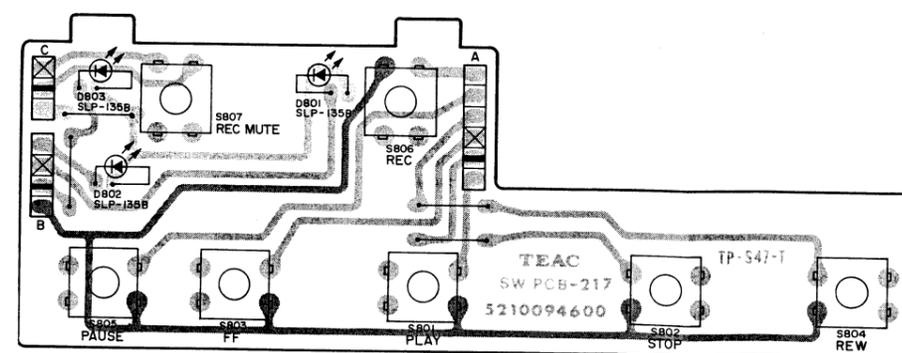

## REC/PLAY AMPL PCB ASSY

## CONTROL PCB ASSY

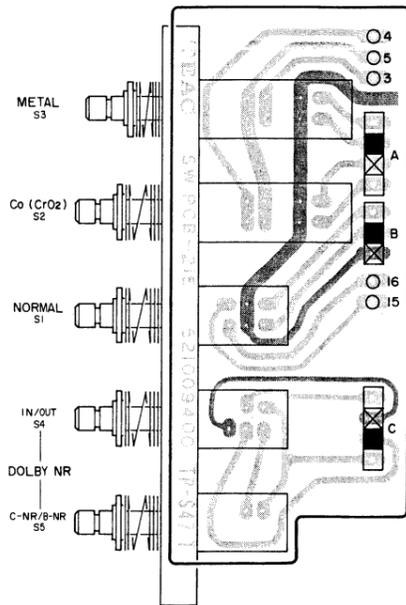

## OPERATION SW PCB ASSY

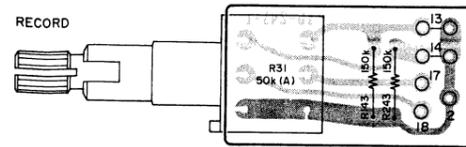

### NOTES

1. PC Boards shown viewed from foil side.
2. The colors used on the PCB illustrations have the following significance:
  - : +B power supply circuit
  - : GND
  - : Other (-B power supply circuit)
3. Resistor values are in ohms (k=1,000 ohms, M=1,000,000 ohms).
4. Capacitor values are in microfarads (p=picofarads).  
All non-polarized capacitors are ±5% Mylar unless otherwise noted.
5. Δ Parts marked with this sign are safety critical components. They must always be replaced with identical components - refer to the appropriate parts list and ensure exact replacement.
