Stereo DC Power Amplifier

## SE-A5(K)

[D],[EG],[EW],[EK],  
[EH],[EF],[EB],[XL],[XA]

\* The black type model is provided with (K) in the Service Manual. **SE-A5(K)**  
\* The colors of this model is black type only.

### Areas

- \* [D] and [EG] are available in Scandinavia and European except Switzerland, United Kingdom, Holland, France and Belgium.
- \* [EW] is available in Switzerland.
- \* [EK] is available in United Kingdom.
- \* [EH] is available in Holland.
- \* [EF] is available in France.
- \* [EB] is available in Belgium.
- \* [XL] is available in Australia.
- \* [XA] is available in Asia, Latin America, Middle East and Africa.

## Specifications

(Specifications are subject to change without notice for further improvement.)

(DIN 45 500)

### ■ AMPLIFIER SECTION

20 Hz~20 kHz continuous power output both channels driven	2 × 160W (4Ω) 2 × 120W (8Ω)
40 Hz~16 kHz continuous power output both channels driven	2 × 160W (4Ω) 2 × 120W (8Ω)
1 kHz continuous power output both channels driven	2 × 180W (4Ω) 2 × 130W (8Ω)
Total harmonic distortion	
rated power at 20 Hz~20 kHz	0.003% (4Ω) 0.002% (8Ω)
rated power at 40 Hz~16 kHz	0.003% (4Ω) 0.002% (8Ω)
rated power at 1 kHz	0.003% (4Ω) 0.002% (8Ω)
half power at 20 Hz~20 kHz	0.001% (8Ω)
half power at 1 kHz	0.0005% (8Ω)
-26 dB power at 1 kHz	0.001% (4Ω)
50 mW power at 1 kHz	0.001% (4Ω)
Intermodulation distortion	
rated power at 250 Hz: 8 kHz=4:1, 4Ω	0.003%
rated power at 60 Hz: 7 kHz=4:1, SMPTE, 8Ω	0.002%
TIM (Transient Intermodulation Distortion)	unmeasurably small
Power bandwidth	
both channels driven, -3 dB	
T.H.D. 0.007%	5 Hz~100 kHz (8Ω)
Residual hum and noise	0.1 mV

Damping factor	70 (4Ω), 140 (8Ω)
Input sensitivity and impedance	1 V/47kΩ
S/N	108 dB (123 dB, IHF, A)
Frequency response	DC~20 kHz, +0 dB, -0.1 dB DC~200 kHz, +0 dB, -3 dB
Channel balance, 250 Hz~6,300 Hz	±0.5 dB
Channel separation, 1 kHz	75 dB
Headphones output level and impedance	730 mV/330Ω
Load impedance	
MAIN or REMOTE	4Ω~16Ω
MAIN and REMOTE	8Ω~16Ω
Meter	
reading range	0.0001 W~300 W (8Ω) -60 dB~+5 dB (logarithmic compression)
frequency response (reading accuracy)	20 Hz~20 kHz ±2 dB (more than -50 dB) 20 Hz~20 kHz ±3 dB (less than -50 dB)

### ■ GENERAL

Power consumption	1000W
Power supply	AC 50 Hz/60 Hz, 110V/120V/220V/240V
Dimensions (W×H×D)	430 × 178 × 416 mm
Weight	18.4 kg

**LOCATION OF CONTROLS**

The products for destination [XA] is equipped with AC outlet.

## ■ L.F.B. AND LIMITED OUTPUT POWER

- One of the important features of this unit is a linear feedback (LFB) circuit.

This circuit is the essence of multi-feedback technology of amplifier circuit, and is really an epoch-making circuit that can theoretically realize zero distortion and output impedance by forming an amplifier having infinite amplification within NF loop.

A brief explanation of NF amplifier is given below.

It is not too much to say that the technical innovation has been carried out in order to increase A (bare gain) and to minimize  $Z_o$  (bare output impedance) and  $D_o$  (bare distortion) for the improvement of NF amplifier.

When bare gain is increased through multi-stage amplification, the phase characteristic of high frequency range will worsen and it may result in worsening of performance and sound quality because of limitations on NF stability.

Also, if it is intended to reduce the bare distortion, it results in reduction of distortion due to the circuit configuration of SLPT (Super linear power transistor) or synchro bias circuit, but there exist theoretical limitations because of using active elements. The linear feedback circuit is the result of further development in realizing infinite bare gain without worsening the phase characteristic of high frequency range that is recognized as ideal for NF amplifier.

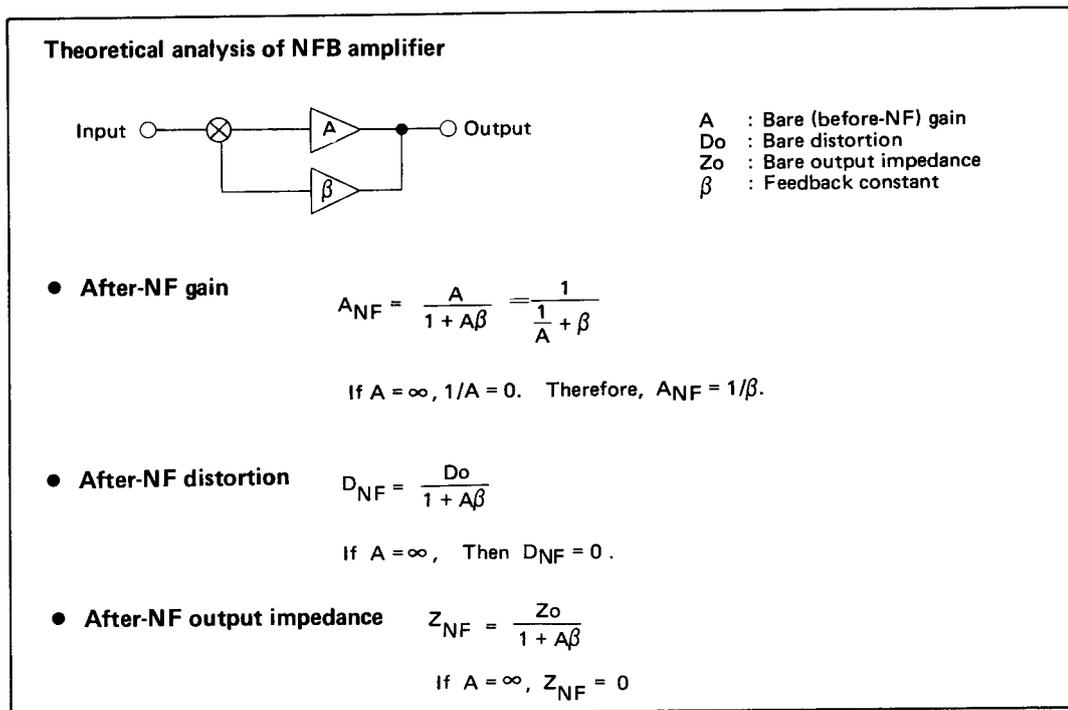

Fig. 1

- Another feature of this unit is an output power selector switch. High output of 120W + 120W is obtainable at "full", and 30W + 30W, at "limited".  
Selecting the latter position means that the 30W amplifier is operated with a large 120W amplifier, and this is a luxurious pleasure in the silence of the night. When the switch is set to "limited", the meter lamp turns OFF.

## ■ PRECAUTIONS FOR CONNECTIONS

Before making connections, be absolutely sure that the power to this unit and all other connected equipment is first turned off.

If connections are made while the power is on, a large input will be applied to the speaker systems, which might damage them, so special care should be taken concerning this point.

## DISASSEMBLY INSTRUCTIONS

- **How to remove the cabinet**  
Remove the 10 setscrews. ( ① ~ ⑩ in fig. 2)
- **How to remove the front panel**  
Remove the 4 setscrews. ( ⑪ ~ ⑭ in fig. 2)
- **How to remove the bottom board**  
Remove the 9 setscrews. ( ⑮ ~ ⑳ in fig. 3)
- **How to remove the power meter**
  1. Remove the cabinet, front panel and bottom board.
  2. Remove the 2 setscrews ⑳ and ㉑ (Fig. 4), and the clamp piece of lamps.
  3. Remove the meter circuit board setscrew ㉒ (Fig. 5).
  4. Remove the setscrews ( ㉓ ~ ㉖ in fig. 4) and pull out the front chassis.
  5. Remove the 6 meter setscrews. ( ㉗ ~ ㉚ in fig. 6)
  6. Remove the nut ㉛ (Fig. 7) to detach the meter from the chassis.

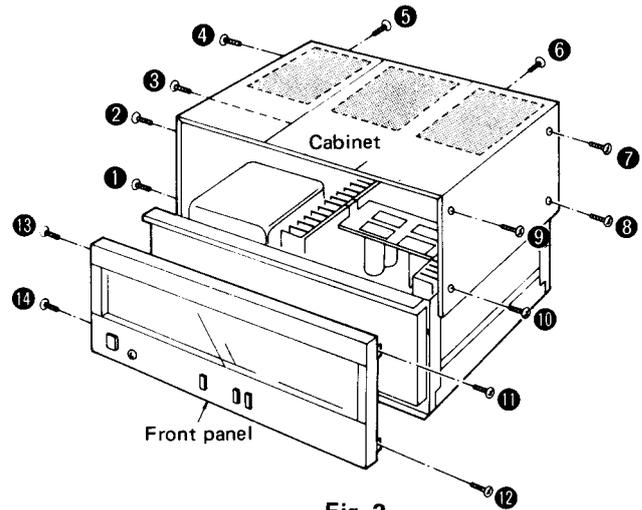

Fig. 2

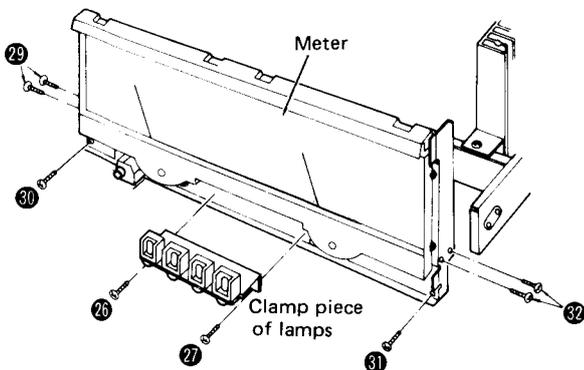

Fig. 4

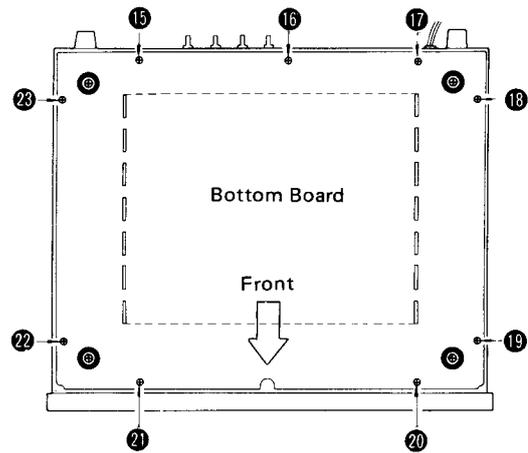

Fig. 3

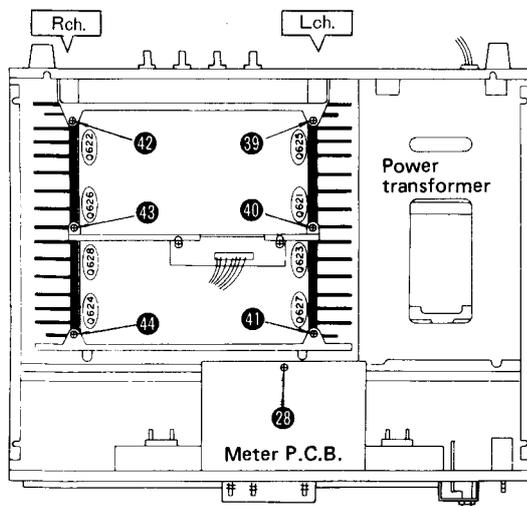

Fig. 5

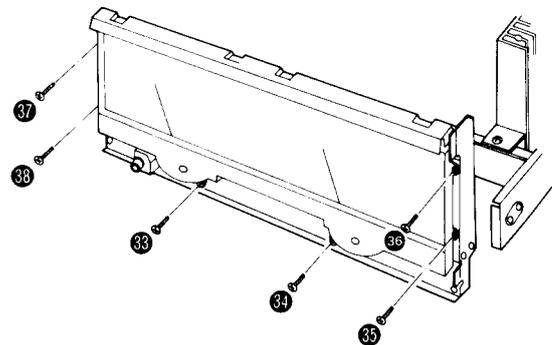

Fig. 6

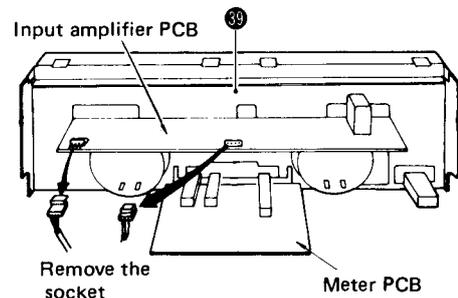

Fig. 7

● **Replacement of power transistor**

1. Remove the cabinet and the bottom board.
2. Remove the electrolytic condenser retainer for power source from the heat sink.
3. Unsolder the power transistor on the L or R channel.
4. Remove the heat sink setscrews (39 ~ 41) or (42 ~ 44) on the L or R channel as in fig. 5.
5. Remove the heat sink from the printed circuit board, and lift it.
6. Replace the power transistor.
7. When installing the transistor, apply heat diffusing agent to both sides of the mica plate.

Also, fasten the radiator plate on Q627 and Q624 with setscrew 45 as in Fig. 8.

Apply heat diffusing agent to the head of temperature compensation/bias control transistor, and press it with the radiator plate.

● **How to remove the synchro bias circuit cover (Fig. 9)**

The projections of the shield cover are inserted into the hole of printed circuit board and they are soldered.

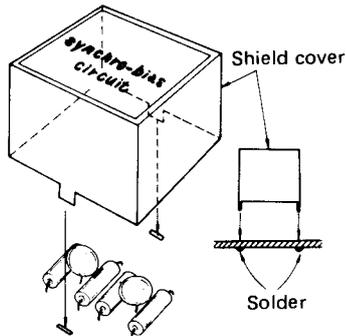

Fig. 9

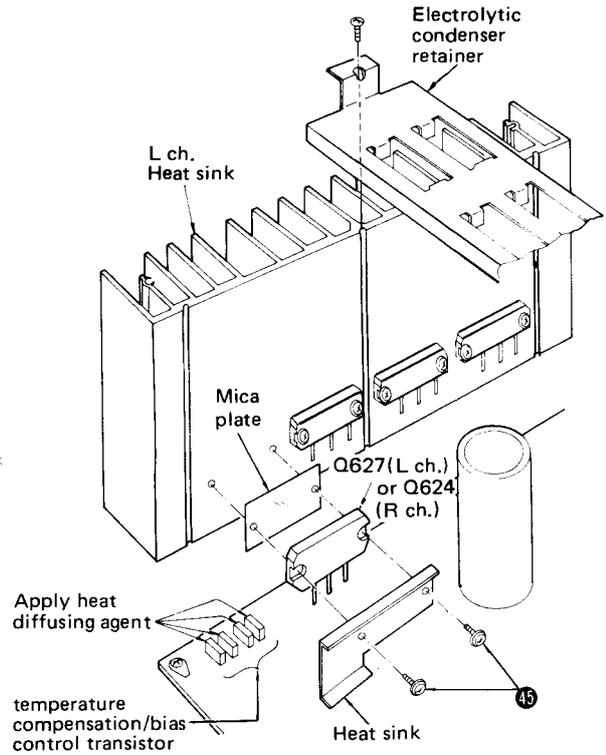

Fig. 8

## MEASUREMENT AND ADJUSTMENTS ENGLISH

● **Before starting the repairing**

Before adjusting or repairing, be sure to short-circuit opposite poles of the 10000 $\mu$ F capacitors (C405 ~ C408) with a resistor approximately of 10 $\Omega$ , 10W for discharging the charged voltage.

Short-circuiting with a screw driver and the like is not only dangerous, but may destroy transistors and diodes, and should therefore be avoided.

● **When it is necessary to adjust ICQ or clamp voltage after repair of the power amplifier, be sure to completely turn the semi-fixed variable resistors (VR601 ~ VR604) counterclockwise before turning on the power switch.**

● **When adjusting and measuring this set, perform ageing of the set in normal position for about 1 minute beforehand.**

● **Setting of controls and instruments to be used**

- |   |   |
|---|---|
| 1. Output power section switch . . . . . full   | 5. Oscilloscope                                   |
| 2. Speaker switch . . . . . main                | 6. Oscillator (1kHz oscillation, with attenuator) |
| 3. Input level volume (rear side) . . . . . MIN | 7. AC electronic voltmeter                        |
| 4. DC voltmeter (able to measure 0.1mV)         | 8. 8-ohm load resistor (100 Watts)                |

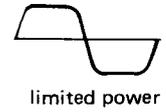

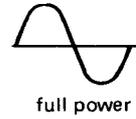

**1. Constant voltage check and DC balance adjustment**

Items	Connection of DC voltmeter	Adjusting parts	Adjustment
Constant voltage $\oplus$ power source check	Between TP401 and chassis (ground)	_____	Normal when it ranges from +23V to +25V.
Constant voltage $\ominus$ power source check	Between TP402 and chassis (ground)	_____	Normal when it ranges from -23V to -25V.

Items	Connection of DC voltmeter	Adjusting parts	Adjustment
DC balance	Main speaker terminals of L (left)	L (left) channel VR301 R (right) channel VR302	<ul style="list-style-type: none"> <li>Adjust it so that 0mV is indicated on DC voltmeter (30mV range).</li> <li>If it is not adjustable by variable resistor, cut off the jumper wire J301 (L channel) and J302 (R channel)</li> </ul>

**2. Inspection of limited power**

1. Connect the oscillator to input terminal (normal) and apply 1 kHz 700mV.
2. Connect the load resistance and oscilloscope in parallel to speaker terminal.
3. Set the input adjusting variable resistor to the maximum point.
4. Shift the output switch from "full" to "limited". Then the output waveform is clipped if the circuit is in normal conditions.

**3. Adjustment of clamp voltage**

\* No load is connected.

Channel	DC voltmeter connection	Part adjusted	Adjustment
Channel L (left)	Between <b>TP1</b> and <b>TP3</b>	VR 603	Adjust to 0.1 mV.
Channel R (right)	Between <b>TP2</b> and <b>TP4</b>	VR 604	Adjust to 0.1 mV.

**4. Adjustment of I<sub>CQ</sub>**

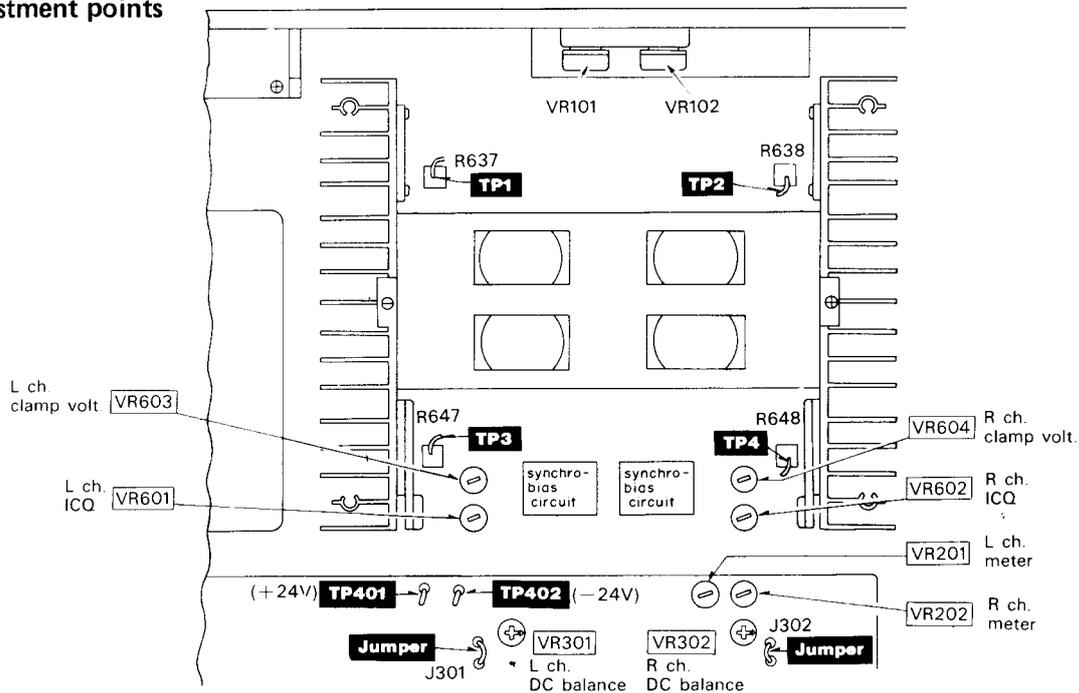

Channel	DC voltmeter connection	Part adjusted	Adjustment
Channel L (left)	Between <b>TP1</b> and <b>TP3</b>	VR 601	Adjust to 15 mV.
Channel R (right)	Between <b>TP2</b> and <b>TP4</b>	VR 602	Adjust to 15 mV.

(Note) Since I<sub>CQ</sub> is unstable for about 15 minutes after turning on the power supply, be sure to perform ageing for at least 15 minutes and make sure that the voltage is in a range of 1mV ~ 20mV.

**5. Meter adjustment**

1. Connect the oscillator to the input terminal (normal) and apply 1 kHz signal.
2. Connect the load resistance and AC voltmeter in parallel to the speaker terminal.
3. Set the input level adjusting VR to the maximum point.
4. Adjust the output level of the oscillator so that the output from the speaker terminal is 28.3V.
5. Adjust VR201 (L channel) and VR202 (R channel) so that the meter indicates 100W.

**• Adjustment points**

## EINSTELLUNGSANWEISUNGEN DEUTSCH

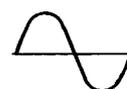

- Wenn es nach Reparatur des Leistungsverstärkers nötig ist, ICQ oder die Klemmschaltung zu justieren, die halb fest eingestellten Drehwiderstände (VR601~VR604) bis zum Anschlag entgegen dem Uhrzeigersinn drehen, bevor der Netzschalter eingeschaltet wird.
- Bevor an diesem Gerät irgendwelche Justier- und Meßarbeiten durchgeführt werden, muß es mindestens ca. 1 Minute lang in normalem Betrieb eingeschaltet sein.
- **Einstellung der zu verwendenden Regler und Instrumente**
  1. Ausgangsleistungs-Wahlschalter . . . . . full
  2. Lautsprecherschalter . . . . . main
  3. Eingangspegel-Volumen (Rückseite) . . . . . MIN
  4. Gleichstrom-Voltmeter (für Messung von 0,1mV geeignet)
  5. Oszilloskop
  6. Oszillator (1kHz-Oszillation, mit Dämpfer)
  7. Elektronisches Wechselstrom-Voltmeter
  8. 8Ohm-Belastungs-Widerstand (100Watt)

### 1. Prüfung der gleichbleibenden Spannung und Gleichstrom-Balance-Justierung

Posten	Gleichstrom-Voltmeter-Anschluß	Zu justierende Teile	Justierung
Prüfung der Stromversorgung mit gleichbleibender Spannung ⊕	Zwischen TP401 und Chassis (Masse)	_____	Normal, wenn innerhalb des Bereichs +23V bis +25V.
Prüfung der Stromversorgung mit gleichbleibender Spannung ⊖	Zwischen TP402 und Chassis (Masse)	_____	Normal, wenn innerhalb des Bereichs -23V bis -25V.
Gleichstrom-Balance	Hauptlautsprecher-Anschlüsse des linken Kanals	Linker Kanal VR301 Rechter Kanal VR302	<ul style="list-style-type: none"> <li>• So abstimmen, daß das Gleichstrom-Voltmeter 0mV anzeigt (30mV-Bereich).</li> <li>• Falls die Abstimmung mit dem Drehwiderstand nicht möglich ist, Schaltaderdrähte J301 (linker Kanal) und J302 (rechter Kanal) abtrennen.</li> </ul>

### 2. Überprüfung der begrenzten Ausgangsleistung

1. Den Oszillator an den Eingangsanschluß (normal) anschließen und 1kHz 700mV zuführen.
2. Belastungswiderstand und Oszilloskop in Parallelschaltung an den Lautsprecheranschluß anschließen.
3. Den Eingangsregelwiderstand auf Maximum einstellen.
4. Den Ausgangsschalter von "full" auf "limited" umschalten. Wenn die Schaltung in normalem Zustand ist, ist die Ausgangswellenform beschnitten.

Volle Leistung

Beschränkte Leistung

### 3. Justierung der Klemmspannung

\* Es ist keine Belastung angeschlossen.

Kanal	Gleichstrom-Voltmeter-Anschluß	Zu justierendes Teil	Justierung
Kanal L (links)	Zwischen TP1 und TP3	VR603	Auf 0,1mV abgleichen.
Kanal R (rechts)	Zwischen TP2 und TP4	VR604	Auf 0,1mV abgleichen.

### 4. ICQ-Justierung

Kanal	Gleichstrom-Voltmeter-Anschluß	Zu justierendes Teil	Justierung
Kanal (links)	Zwischen TP1 und TP3	VR601	Auf 15mV abgleichen.
Kanal R (rechts)	Zwischen TP2 und TP4	VR602	Auf 15mV abgleichen.

(Anmerkung) Da ICQ während ca. 15 Minuten nach dem Einschalten der Stromversorgung instabil bleibt, muß das Gerät vor der Justierung mindestens 15 Minuten lang warmlaufen.  
Überprüfen, daß die Spannung im Bereich 1mV ~ 20mV liegt.

### 5. Justierung des Meters

1. Den Oszillator an den Eingangsanschluß (normal) anschließen und 1kHz-Signal zuführen.
2. Den Belastungswiderstand und das Wechselstrom-Voltmeter parallel an den Lautsprecheranschluß anschließen.
3. Den Drehwiderstand, der den Eingangspegel regelt, auf Maximum einstellen.
4. Den Ausgangspegel des Oszillators so abstimmen, daß der Ausgang vom Lautsprecheranschluß 28,3V beträgt.
5. VR201 (linker Kanal) und VR202 (rechter Kanal) so abstimmen, daß das Meter 100W anzeigt.

## INSTRUCTIONS DE REGLAGE FRANÇAIS

- Lorsqu'il est nécessaire de régler ICQ ou la tension de stabilisation après la réparation de l'amplificateur de puissance, s'assurer de tourner complètement les résistances variables semifixes (VR601~VR604) dans le sens inverse des aiguilles d'une montre avant de mettre en marche le commutateur d'alimentation.
- Lorsqu'on fait une mise au point et un mesurage de cet appareil, exécuter préalablement un vieillissement de l'équipement en position normale pendant à peu près 1 minute.
- Réglage des commandes et des appareils à utiliser
  1. Commutateur de la section de la puissance de sortie . . . . . à fond
  2. Commutateur de haut-parleur . . . . . principal
  3. Volume du niveau d'entrée (côté arrière) . . . . . MIN
  4. Voltmètre à C.C. (capable de mesurer 0,1mV)
  5. Oscilloscope
  6. Oscillateur (Oscillation de 1kHz, avec atténuateur)
  7. Voltmètre électronique à C.A.
  8. Résistance de charge de 8 ohms (100 watts)

### 1. Vérification de la tension constante et réglage de l'équilibrage à C.C.

Points	Branchement du voltmètre à C.C.	Eléments à régler	Réglage
Vérification de la source d'énergie de la tension constante "⊕".	Entre TP401 et le châssis (masse)	_____	Normale lorsqu'elle s'étage de +23V à +25V.
Vérification de la source d'énergie de la tension constante "⊖".	Entre TP402 et le châssis (masse)	_____	Normale lorsqu'elle s'étage de -23V à -25V.
Equilibrage C.C.	Bornes du haut-parleur principal de L (gauche)	Canal L (gauche) VR301 Canal R (droite) VR302	<ul style="list-style-type: none"> <li>• Le régler de façon à ce que 0mV soit indiqué sur le voltmètre à C.C. (plage de 30mV).</li> <li>• S'il n'est pas réglable par la résistance variable, couper le fil de connexion J301 (canal de gauche) et J302 (canal de droite).</li> </ul>

### 2. Inspection de la puissance limitée

1. Brancher l'oscillateur à la borne d'entrée (ordinaire) et appliquer 1kHz 700mV.
2. Brancher la résistance de charge et l'oscilloscope en parallèle à la prise du haut-parleur.
3. Régler la résistance variable d'ajustement d'entrée au point maximal.
4. Déplacer la manette de puissance de sortie de "full" (total) à "limited" (limité). Ainsi, la forme d'onde de sortie sera coupée si le circuit est en conditions normales.

Pleine puissance

Puissance limitée

### 3. Mise au point de la tension de stabilisation

\* Aucune charge n'est mise en circuit.

Canal	Branchement du voltmètre C.C.	Pièce à régler	Ajustement
Canal L (gauche)	Entre TP1 et TP3	VR603	Ajuster sur 0,1mV.
Canal R (droite)	Entre TP2 et TP4	VR604	Ajuster sur 0,1mV.

### 4. Réglage de ICQ

Canal	Branchement du voltmètre C.C.	Pièce à régler	Ajustement
Canal L (gauche)	Entre TP1 et TP3	VR601	Ajuster sur 15mV.
Canal R (droite)	Entre TP2 et TP4	VR602	Ajuster sur 15mV.

(Nota) Etant donné que ICQ est instable pendant à peu près 15 minutes après la mise en marche de l'alimentation, s'assurer d'exécuter un vieillissement d'au moins 15 minutes et vérifier que la tension soit bien dans une plage de 1mV~20mV.

### 5. Réglage du mesureur

1. Brancher l'oscillateur dans la borne d'entrée (normale) et appliquer un signal de 1kHz.
2. Brancher en parallèle la résistance de charge et le voltmètre à C.A. à la borne du haut-parleur.
3. Régler l'ajustement VR du niveau d'entrée au point maximum.
4. Ajuster le niveau de sortie à l'oscillateur de façon à ce que la sortie de la borne du haut-parleur soit de 28,3V.
5. Ajuster VR201 (canal de gauche) et VR202 (canal de droite) de façon à ce que le mesureur indique 100W.

## PROTECTION CIRCUITRY INDICATOR

The indicator lights up when a trouble occurs in this unit.

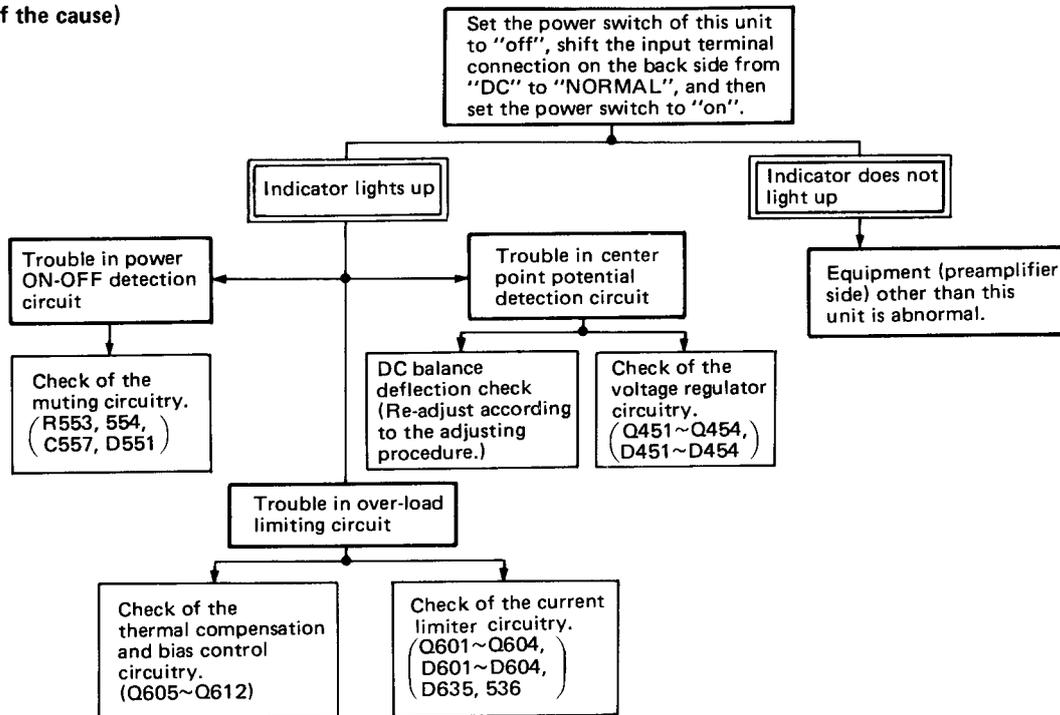

With the power switch set to "on", the indicator lights up, and it goes out when the unit is in normal operation (about 7 sec. later). If abnormality takes place during operation, the indicator lights up or blinks. In that case, set the power switch to "off" and check the cause according to the following procedure.

### • When the indicator lights up:

#### (Cause)

1. Due to troubles in other equipment (preamp., etc.), direct current is applied to the input, causing the protection circuit to operate.
2. This unit is in trouble, causing the protective circuit to operate.

#### (Check of the cause)

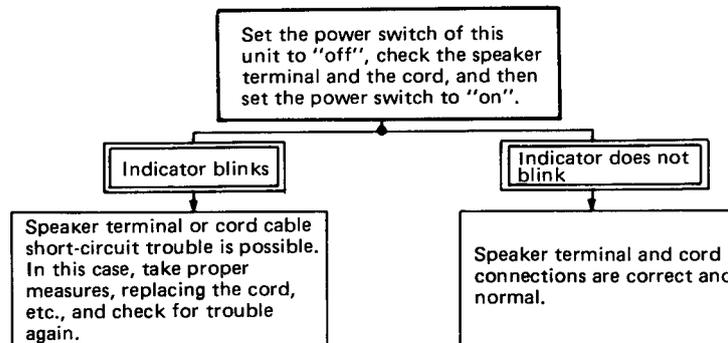

### • When the indicator blinks:

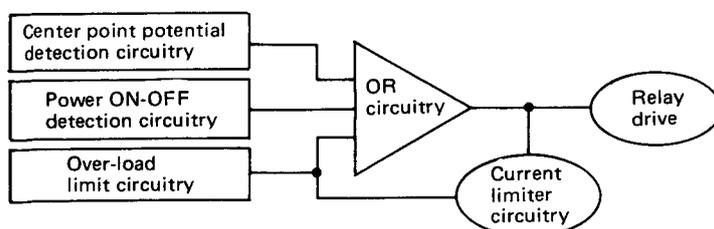

#### (Cause)

The speaker terminals or the power cord cable (positive and negative) are short-circuited, causing the protection circuit to operate.

#### (Check of the cause)

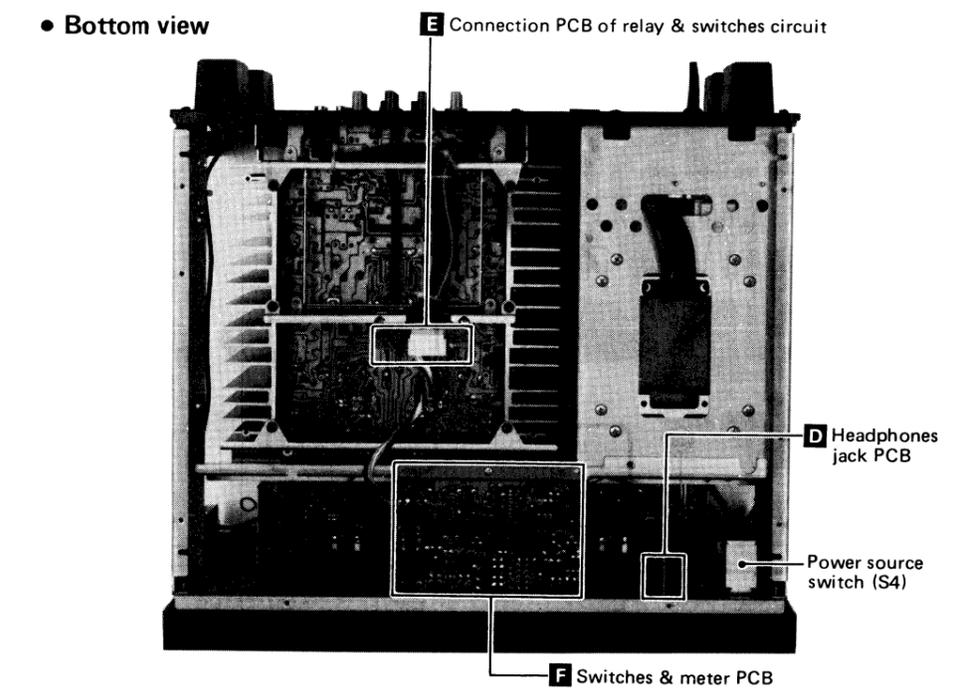

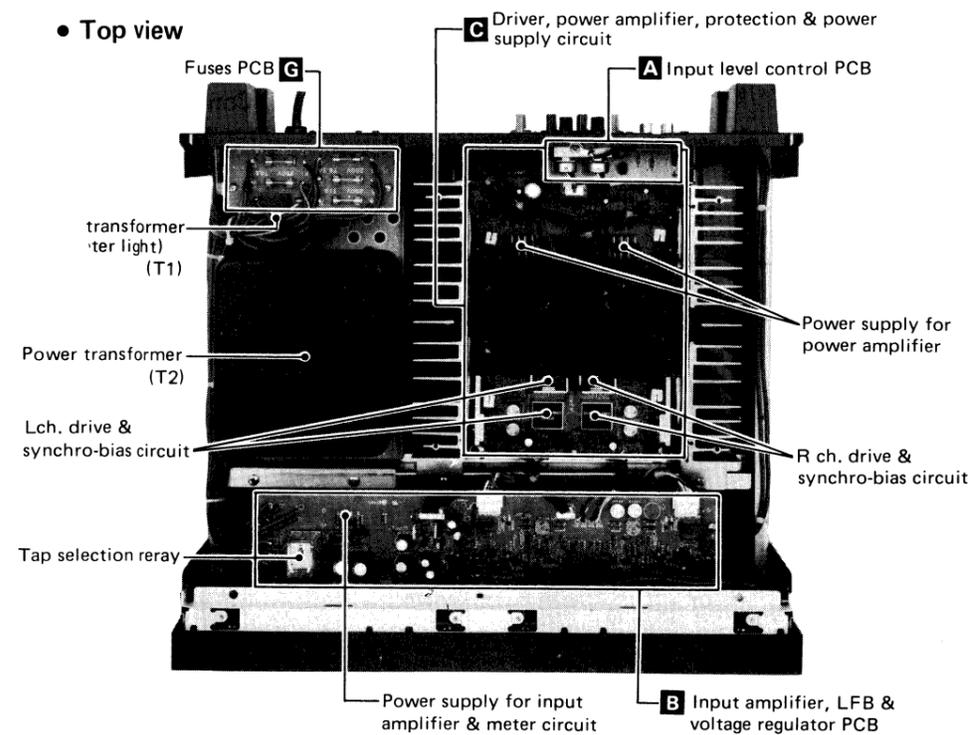

### • The block diagram of the protection circuit is shown below.

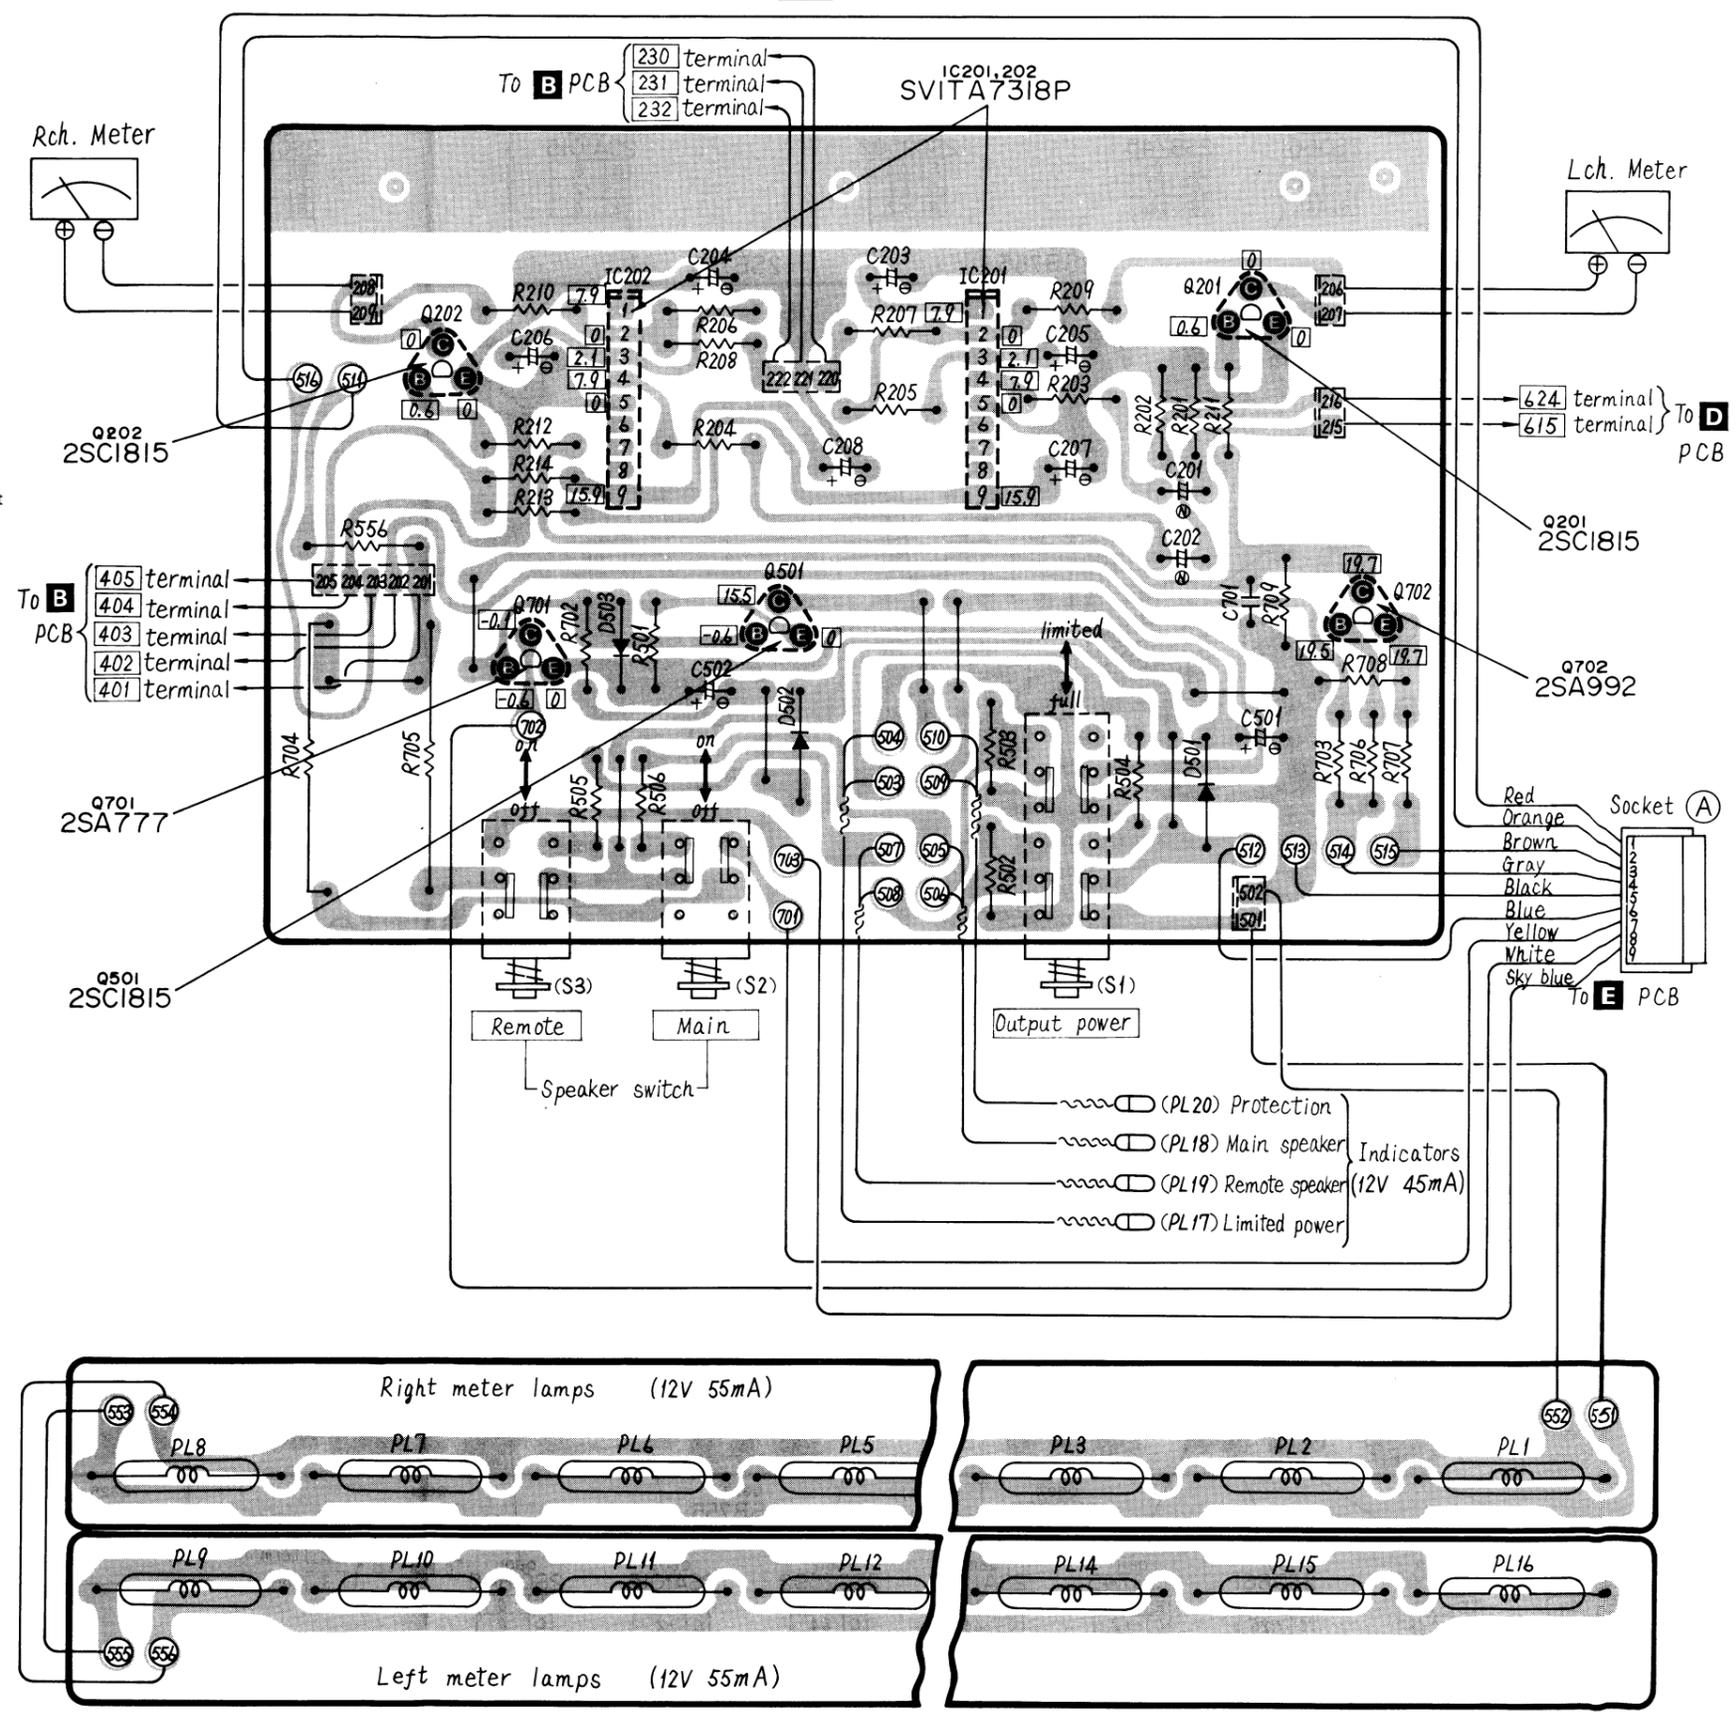

\* If the speaker impedance is too low (less than 3Ω), the limiter circuit operates and power is extremely reduced. (Relay does not operate.)

# SCHEMATIC DIAGRAM

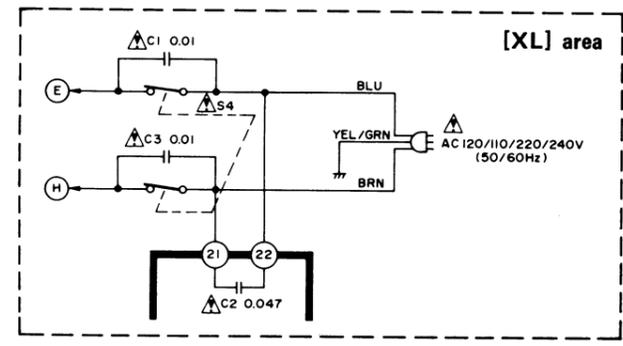

**Notes:**

1. S1: Output power selector switch in "full" position. (full ↔ limited)
2. S2: Main speaker switch in "on" position.
3. S3: Remote speaker switch in "off" position.
4. S4: Power source switch in "on" position.
5. S5: Voltage adjustment switch in "220V" position. (240V ↔ 220V ↔ 110V ↔ 120V)
6. Indicated voltage values are the standard values for the unit measured by the DC electronic circuit tester (high-impedance) with the chassis taken as standard. Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.
7. Signal lines of left channel
8. Positive (+B) voltage lines.
9. indicate capacitors are non-polar electrolytic capacitor.
10. Important safety notice  
Components identified by mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.

REPLACEMENT PARTS LIST

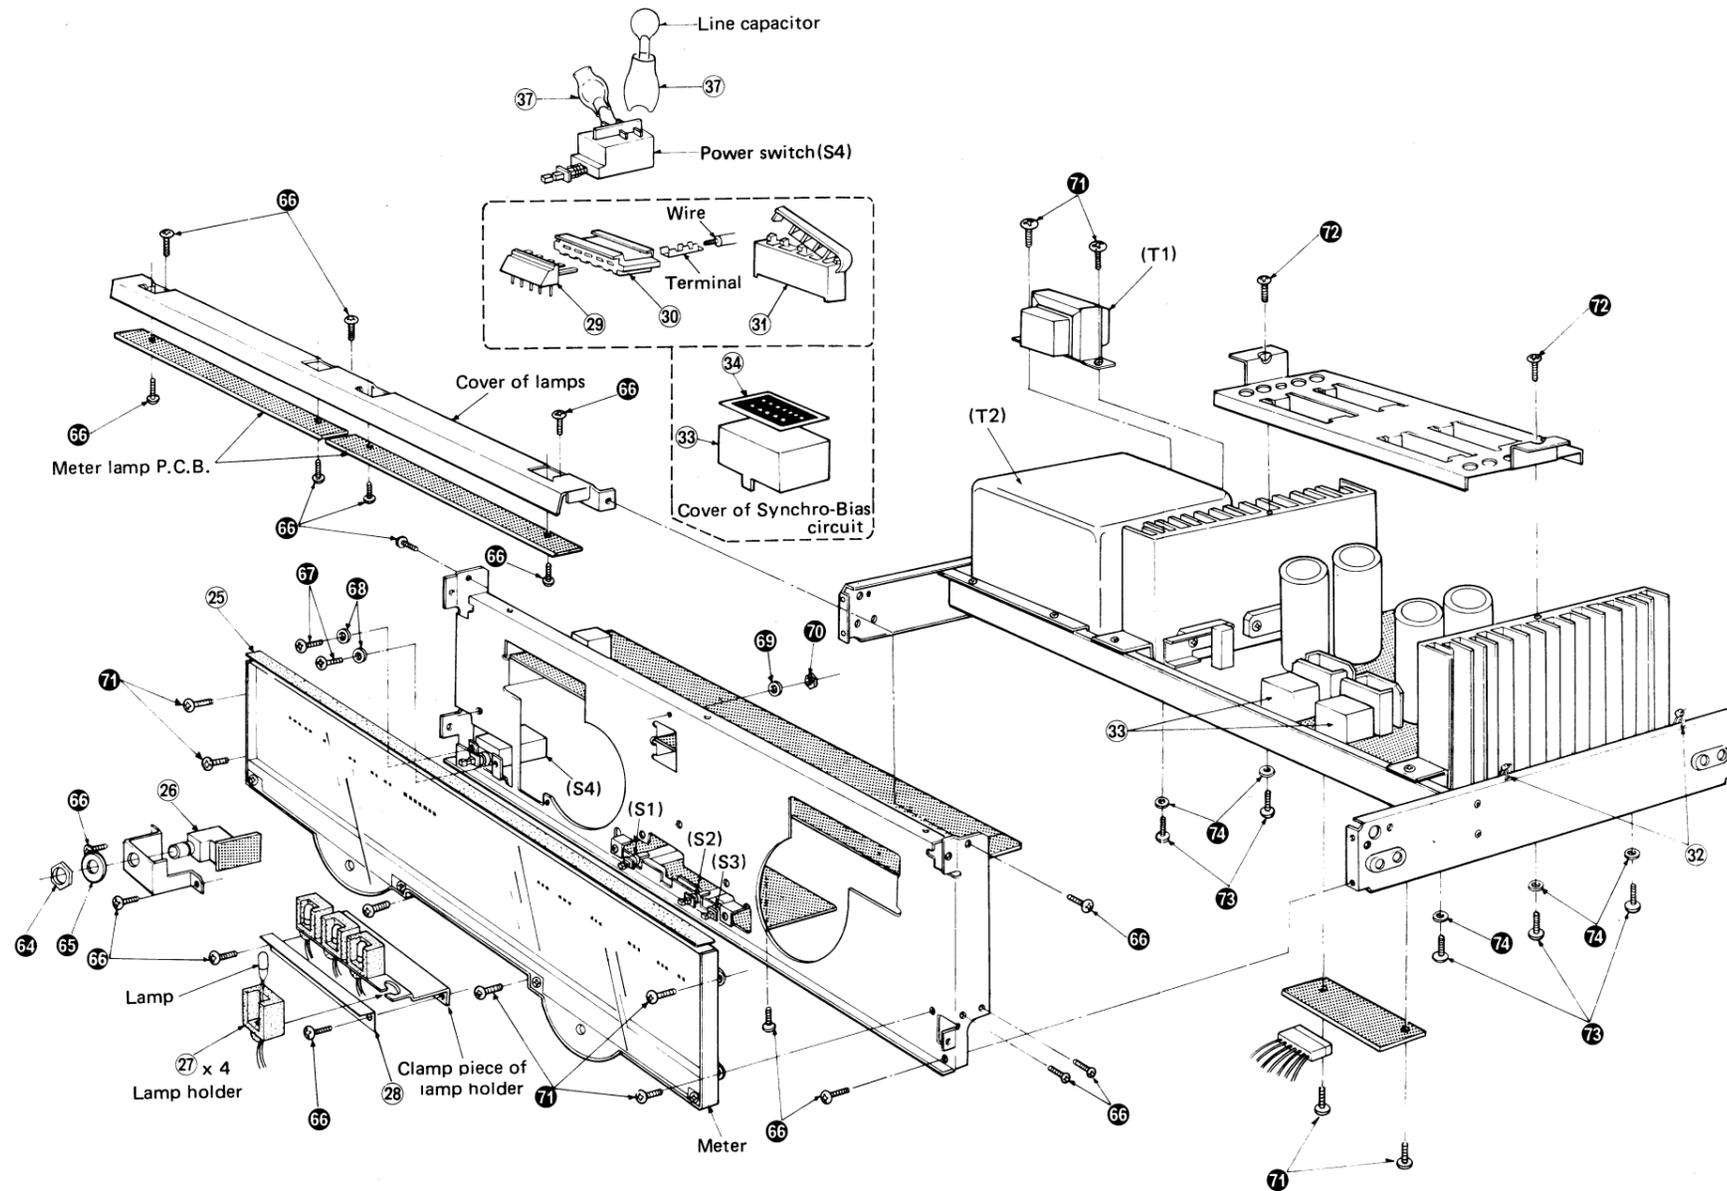

**Notes:** 1. Parts numbers are indicated on most mechanical parts. Please use this part number for parts orders.  
 2. Important safety notice: Components identified by  $\Delta$  mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.  
 3. Bracketed indications in Ref. No. columns specify the area. Parts without these indications can be used for all areas.

\* [D] and [EG] are available in Scandinavia and European except Switzerland, United Kingdom, Holland, France and Belgium.  
 \* [EW] is available in Switzerland.  
 \* [EK] is available in United Kingdom.  
 \* [EH] is available in Holland.  
 \* [EF] is available in France.  
 \* [EB] is available in Belgium.  
 \* [XL] is available in Australia.  
 \* [XA] is available in Asia, Latin America, Middle East and Africa.

<b>CABINET and CHASSIS PARTS</b>		
1	SGWEA5E	Panel, Front Ass'y (with Glass)
2	SGE629-1	Panel, Left Side
3	SGE629	Panel, Right Side
4	SHG6123	Cushion, Glass
5	SGEEA5N	Panel, Lower Ass'y (with Panel Lights)
6	SGE627	Panel, Upper
7	SUS193	Spring, Power Switch Buttons
8	SUS159	Spring, Speakers Select Buttons
9	SBC261-1	Button, Power Switch
10	SBC219-2	Button, Speakers Select
11	SKC530B1	Cabinet
12	SKL247	Foot, Bottom
13	SKU8210-2	Bottom Board
14	SJT347	Holder, Fuse
15	SJF3431A	Terminal, Input

Ref. No.	Part No.	Part Name & Description
16	RJT202B	Terminal, Ground (1 pin)
17	SJF4813-1	Terminal, Speakers
18 [XA] only	SJSA66-2	Socket, AC Outlet
19	SBN613	Knob, Input Level Control
20 [EW, XA]	SFSR4N4	Bushing, AC Cord
20 [D, EG, XL]	SHR131	Bushing, AC Cord
20 [EK]	SHR129	Bushing, AC Cord
21 [D, EG]	SJA123	AC Cord
21 [EW]	SJA111	AC Cord
21 [EK]	QFC1205M	AC Cord
21 [XL]	QFC1207MA	AC Cord
21 [XA]	SJA121	AC Cord
22 [D, EH, EB, EF]	SGP2390-2A	Rear Panel
22 [EW]	SGP2390-3A	Rear Panel
22 [XA]	SGP2390-4A	Rear Panel
22 [EK]	SGPEA5EK	Rear Panel, SGP2390-3A with Name Plate SGT23550
22 [EG]	SGPEA5E	Rear Panel, SGP2390-2A with Name Plate SGT23550
22 [XL]	SGPEA5XL	Rear Panel, SGP2390-2A with Name Plate SGT23570

52	XTB3+8E

PACKING

Accessories

Ref. No.	Part No.	Part Name & Description
23	SKL241	Foot, Rear
24	SHS2437	Fiber, Cabinet
25	SDU35-1	Filter, Meter Light
26	XCJ6P21B-A1	Jack, Headphones
27	SHG1575	Rubber Holder, Lamp
28	SHR5103	Clamper, Wire
29	SJT3209	Terminal, 2 pin
29	SJT3609	Terminal, 6 pin
30	SJS5213	Socket, 2 pin
30	SJS5621	Socket, 6 pin
30	SJS5905	Socket, 9 pin
31	SJS5327	Connector, 3 pin
31	SJS5519	Connector, 5 pin
32	SHR301	Clamper, Wire
33	SUV423	Cover, Synchronism Bias Circuit
34	SGK1347	Label, Synchro-Bias
35	SUV453	Cover, Voltage Adjuster
36	SMX405	Cover, Fuse P.C.B.
37	SMXA65	Cover, Line Capacitor

**SCREWS, NUTS and WASHERS**

66 [XL] only	XTB3+8BFZ	Screw, Tapping, $\oplus$ 3x8 (Front Panel)
67	XTS3+8B	Screw, Tapping, $\oplus$ 3x8 (Front Panel)
68	XTB3+8BFN	Screw, Tapping, (Right & Left Side Panel)

Ref. No.	Part No.	Part Name & Description
69	XSS5+12F1S	Screw, Tapping, $\oplus$ 3 x 8 (Cabinet)
70	XTB3+10BFZ	Screw, Tapping, $\oplus$ 3 x 10 (Cabinet)
71	XTB3+8BFN	Screw, Tapping, $\oplus$ 3 x 8 (P.C.B.)
72	XTB3+8BFZ	Screw, Tapping, $\oplus$ 3 x 8 (Bottom Board)
73	XTB3+12BFZ	Screw, Tapping, $\oplus$ 3 x 12 (Bottom Feet)
74	XTB3+8BFZ	Screw, Tapping, $\oplus$ 3 x 8 (Rear Panel)
75	XWC3B	Washer, External Toothed Lock, $\phi$ 3
76	XWV8	Washer, Spring, $\phi$ 8
77	XNS8	Nut, M8 (Volume)
78	XTB3+8BFZ	Screw, Tapping, $\oplus$ 3 x 8 (Rear Panel)
79	XTB4+12BFZ	Screw, Tapping, $\oplus$ 4 x 12 (Rear Feet)
80	XNS12	Nut, M12 (Headphone Jack)
81	SNE59-1	Washer, Wave
82	XTB3+8BFN	Screw, Tapping, $\oplus$ 3 x 8 (Chassis)
83	XSN3+6S	Screw, $\oplus$ 3 x 6 (Switch)
84	XWA3B	Washer, Spring, $\phi$ 3
85	XWA3B	Washer, Spring, $\phi$ 3
86	XNG3ES	Nut, M3 (Meter)
87	XTB3+8BFN	Screw, Tapping, $\oplus$ 3 x 8 (P.T. & Meter)
88	XTB3+8BFZ	Screw, Tapping, $\oplus$ 3 x 8 (P.T. & Meter)
89	XTN3+10B	Screw, Tapping, $\oplus$ 3 x 10 (Heat Sink)
90	XWG3	Washer, Plain, $\phi$ 3
91	XTB3+8BFN	Screw, Tapping, $\oplus$ 3 x 8 (Ground Terminal)
92	XWC3B	Washer, External Toothed Lock, $\phi$ 3
93	XSN3+8BVS	Screw, $\oplus$ 3x8 (Voltage Adjuster)
94	XWA3BFZ	Washer, Spring $\phi$ 3
