

STEREO POWER AMPLIFIER

M-85

SERVICE MANUAL

FRONT PANEL

IMPORTANT NOTICE

This manual has been provided for the use of authorized Yamaha Retailers and their service personnel. It has been assumed that basic service procedures inherent to the industry, and more specifically Yamaha Products, are already known and understood by the users, and have therefore not been restated.

WARNING: Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components and failure of the product to perform as specified. For these reasons, we advise all Yamaha product owners that all service required should be performed by an authorized Yamaha Retailer or the appointed service representative.

IMPORTANT: The presentation or sale of this manual to any individual or firm does not constitute authorization, certification, recognition of any applicable technical capabilities, or establish a principle-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research, engineering, and service departments of Yamaha are continually striving to improve Yamaha products. Modifications are, therefore, inevitable and specifications are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

WARNING: Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).

IMPORTANT: Turn the unit OFF during disassembly and parts replacement. Recheck all work before you apply power to the unit.

■ TO SERVICE PERSONNEL

1. Critical Components Information.
Components having special characteristics are marked Δ and must be replaced with parts having specifications equal to those originally installed.
2. Leakage Current Measurement (For 120V Model Only).
When service has been completed, it is imperative that you verify that all exposed conductive surfaces are properly insulated from supply circuits.
 - Meter impedance should be equivalent to 1500 ohm shunted by $0.15\mu\text{F}$.
 - Leakage current must not exceed 0.5mA.
 - Be sure to test for leakage with the AC plug in both polarities.

■ SPECIFICATIONS

■ WIRING

■ ADJUSTMENTS

No.	Item	Condition/Procedure	Check point	Adjustment/Confirmation		Reference
1	Idling adjustment	Before adjustment, leave M-85 about 2 minutes with: (a) Power switch: ON (b) Auto-Class A switch: OFF (c) NO signal input	Voltage across R153, R155 —Lch R154, R156 —Rch	VR103 VR104	Adjust to 15.5 mV ±1 mV DC	R153-156: Emitter resistors of the power transistors (0.22 Ω)
2	Confirmation of Auto-A function	Auto-Class A switch: OFF → ON	Same as above	—	Confirmation in- crease of voltage	more than 31 mV DC
3	Meter level adjustment	Meter load selector: 2 Ω Amplifier load: NO load or 8 Ω Signal freq.: 1 kHz				
		Speaker output voltage: 34.5 V AC	0 dB — LED	VR 501 (L) VR 502 (R)	Adjust to the lights up point	
		Reduce the signal level 1 dB (to 30.8 V AC)		—	Confirm the 0 dB—LED fades out

PARTS LIST

■ ELECTRICAL PARTS

- Components having special characteristics are marked  and must be replaced with parts having specifications equal to those originally installed.
- Carbon resistors 1/4 W are not included in the ELECTRICAL PARTS list. For the parts No. of the carbon resistor, refer to P. 25.
