SERVICE MANUAL

IMPORTANT NOTICE

This manual has been provided for the use of authorized YAMAHA Retailers and their service personnel. It has been assumed that basic service procedures inherent to the industry, and more specifically YAMAHA Products, are already known and understood by the users, and have therefore not been restated.

WARNING: Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components, and failure of the product to perform as specified. For these reasons, we advise all YAMAHA product owners that any service required should be performed by an authorized YAMAHA Retailer or the appointed service representative.

IMPORTANT: The presentation or sale of this manual to any individual or firm does not constitute authorization, certification or recognition of any applicable technical capabilities, or establish a principle-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research, engineering, and service departments of YAMAHA are continually striving to improve YAMAHA products. Modifications are, therefore, inevitable and specifications are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

WARNING: Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).

IMPORTANT: Turn the unit OFF during disassembly and part replacement. Recheck all work before you apply power to the unit.

■ TO SERVICE PERSONNEL

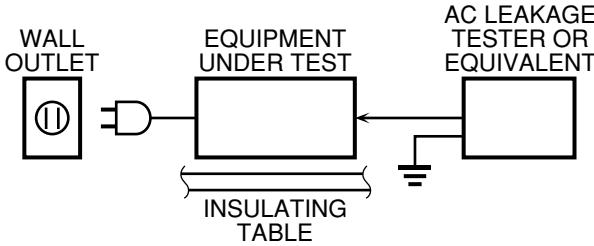

1. Critical Components Information

Components having special characteristics are marked  and must be replaced with parts having specifications equal to those originally installed.

2. Leakage Current Measurement (For 120V Models Only)

When service has been completed, it is imperative to verify that all exposed conductive surfaces are properly insulated from supply circuits.

- Meter impedance should be equivalent to 1500 ohm shunted by 0.15 μ F.
- Leakage current must not exceed 0.5mA.
- Be sure to test for leakage with the AC plug in both polarities.

WARNING: CHEMICAL CONTENT NOTICE!

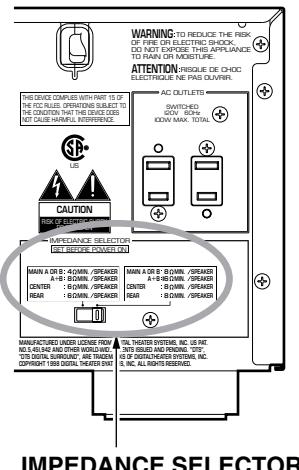

The solder used in the production of this product contains LEAD. In addition, other electrical/electronic and /or plastic (where applicable) components may also contain traces of chemicals found by the California Health and Welfare Agency (and possibly other entities) to cause cancer and/or birth defects or other reproductive harm.

DO NOT PLACE SOLDER, ELECTRICAL/ELECTRONIC OR PLASTIC COMPONENTS IN YOUR MOUTH FOR ANY REASON WHATSOEVER!

Avoid prolonged, unprotected contact between solder and your skin! When soldering, do not inhale solder fumes or expose eyes to solder/flux vapor!

If you come in contact with solder or components located inside the enclosure of this product, wash your hands before handling food.

■ DISASSEMBLY PROCEDURES

(Remove parts in the order as numbered.)
Disconnect the power cord from the AC outlet.

1. Removal of Top Cover

- Remove 2 screws (①), 4 screws (②) and 5 screws (③) in Fig. 1.
- Slide the Top Cover rearward to remove it.

2. Removal of Front Panel

Remove 9 screws (④) in Fig. 1, and the Front Panel can be removed forward.

3. Removal of MAIN PCB (1)

- Remove the Top Cover.
- Remove 2 screws (⑤) in Fig. 3 AND remove the support metal plate.
- Disconnect 3 connectors (CB232, CB601, CB602 in Fig. 2) from the VIDEO PCB (1), and disconnect the connector (CB3) from the MAIN PCB (1) in Fig. 2.
- Remove 8 screws (⑥) in Fig. 3, and the VIDEO PCB (1) and VIDEO PCB (3) can be removed.
- Disconnect the connector (CB353) from the POWER PCB (6) in Fig. 2.
- Remove the plastic rivet ⑦, and the POWER PCB (6) can be removed upward from the heat sink.
- Disconnect the connector (CB1 in Fig. 2) from the MAIN PCB (1).
- Remove 2 screws (⑧) in Fig. 2, and the support Transistor can be removed.
- Remove 6 screws (⑨) in Fig. 2.
- Remove 6 screws (⑩) in Fig. 3.
- Pull out the MAIN PCB (1) forward as shown in Fig. 3. At this time, disconnect the flexible flat cable connected to the MAIN PCB (1) if necessary.

■ SELF DIAGNOSIS FUNCTION (DIAG)

There are 13 DIAG menu items each of which has sub-menu items. Listed in the table below are menu items and sub-menu items. (Menu operation of DIAG is executed by using the main unit and its remote control unit.)

For the setting procedure of the tape, please refer to "Setting the Manufacturer Code" (RX-V1000; p.54, RX-V1000RDS; p.57) of the Instruction Manual.

• Starting DIAG

Press the “STANDBY/ON key while pressing those two keys indicated in the figure on the right.

• Starting DIAG in the protection cancel mode

If the protection function works and causes hindrance to trouble diagnosis, cancel the protection function as described below, and it will be possible to enter the DIAG mode. (The protection function other than the excess current detect function will be cancelled.)

Press the “STANDBY/ON key while pressing those two keys indicated in the figure on the right. At this time, keep pressing those two keys for 3 seconds or longer.

In this mode, the “ZONE2” segment of the FL display of the main unit flashes to indicate that the mode is DIAG mode with the protection functions cancelled.

CAUTION!

Note that during the DIAG mode with protection functions cancelled, even when a danger is encountered, protection functions do not work. Therefore, operating the equipment in this mode may cause danger to it. Use special care for this point when using this mode.

• Canceling DIAG

[1] Before canceling DIAG, execute setting for PRESET of DIAG menu No.9 (Memory initialization inhibited or Memory initialized).

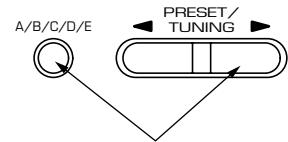

* In order to keep the user memory stored, be sure to select PRESET INHI (Memory initialization inhibited).

[2] Turn off the power by pressing the “STANDBY/ON” key of the main unit or the “STANDBY” key of the remote controller.

• Display provided when DIAG started

When the monitor is connected, DIAGNOSTIC MENU appears on its screen as shown in the figure. (It remains on display until DIAG is cancelled.)

Keys of main unit (in sealing panel)

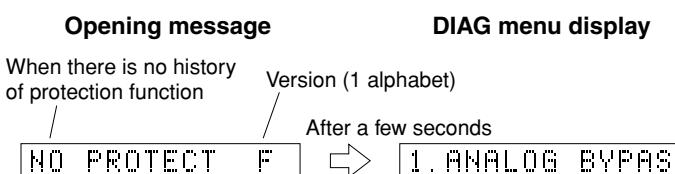

Turn on the power while pressing these keys.

When there is a history of protection function against abnormal DC output Version (1 alphabet)

DC PRT : 000 F

Voltage display in %

Cause: An excessive current flowed to the power amplifier.

Supplementary information: As current of the power transistor is detected, the abnormal channel can be identified by checking the current detect transistor.

Turning on the power without correcting the abnormality will cause the protection function to work immediately and the power supply will instantly be shut off.

Cause: The voltage in the power supply section is abnormal.

Supplementary information: The abnormal voltage is displayed in % based on 5V as 100%.

Turning on the power without correcting the abnormality will cause the protection function to work 1 second later and the power supply will be shut off.

Cause: DC output of the power amplifier is abnormal.

Supplementary information: The abnormal voltage is displayed in % based on 5V as 100%.

Turning on the power without correcting the abnormality will cause the protection function to work 3 seconds later and the power supply will be shut off.

* Besides above possible causes for abnormality, a cause may lie in disconnected connector, around CPU, etc.

* For the protection voltage value, refer to DIAG menu No.10 described later.

• History of protection function

When the protection function has worked, its history is stored in memory with a backup. Even if no abnormality is noted while servicing the unit, an abnormality which has occurred previously can be defined as long as the backup data has been stored.

The history of the protection function is cleared when DIAG is cancelled by selecting RESERVED (Memory initialized) of DIAG menu No.9 or when the backup data is erased.

• Display during menu operation

During the DIAG operation, the menu list described in the section of the startup screen appears on the superimposed screen and the function at work is indicated on the FL indicator. The contents displayed during the function operation are described in the later section on details of functions.

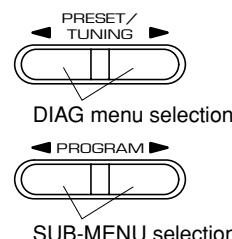

• Operation procedure of DIAG menu and SUB-MENU

There are No.1 to No.13 MENU items, each of which has some SUB-MENU items.

DIAG menu selection

Main unit: Select the menu using **◀** (Forward) and **▶** (Reverse) keys of PRESET/TUNING located in the sealing panel.

Remote control unit: Select the menu using **▲** (Forward) and **▼** (Reverse) keys.

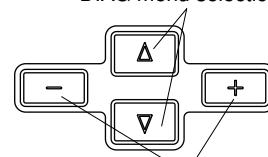

SUB-MENU selection

Main unit: Select the sub-menu using **◀** (Forward) and **▶** (Reverse) keys of PROGRAM located in the sealing panel.

Remote control unit: Select the sub-menu using **+** (Forward) and **-** (Reverse) keys.

* Only the remote control keys indicated in the MENU List can be used to select a sub-menu directly.

Use these keys for
DIAG menu selection.

Use these keys for
SUB-MENU selection.

• Functions in DIAG mode

In addition to the DIAG menu items, functions as listed below are available.

- Input selection, 6CH input
- REC OUT (ZONE2) switching
- Center/Rear/Sub-woofer level adjustment
- Muting
- Speaker relay A/B
- Power on/off
- Master volume

It is possible to set to the following volume values directly by transmitting remote control codes during the DIAG operation only.

Volume value (dB)	Remove control code (key)
0	7A-E0 (TUNER 6.1/ES)
-20	7A-E1 (TUNER 9)
-30	7A-E2 (TUNER 10)
MUTE	7A-E3 (TUNER 11)

- * Functions related to the tuner and the set menu are not available.
- * It is possible to confirm Menu No.11 IF STATUS while keeping the signal process (operation status) of each DIAG menu by using the input mode key of the main unit.

• Initial settings used to start DIAG

Following initial settings are used when starting DIAG.

When DIAG is canceled, these settings are restored to those before starting DIAG.

- Master volume: -40dB
- Input, ZONE2 input: DVD (6CH INPUT OFF)
- Front/Center/Rear/Rear Center/Sub-woofer level: 0dB
- Audio mute: OFF
- Speaker relay A/B: ON
- Speaker setting: LARGE / BASS OUT = BOTH
- DIAG menu: DSP through (analog bypass)

• Details of DIAG menu

1. DSP THROUGH

There are 3 sub-menu items (ANALOG BYPAS, DSP 0dB, DSP FULL BIT).

ANALOG BYPASS [Remote control code: 7A-90 (PRG9)]

1. ANALOG BYPAS

- The input mode is fixed to use the analog (A/D) system.
- The L/R signal is output through the analog bypass without using the DSP block.
- C/RC, FL/FR, RL/RR, SWF signals are output through DSP (see the signal path in the figure below) without using the external DRAM. (Head margin included)

Head margin:

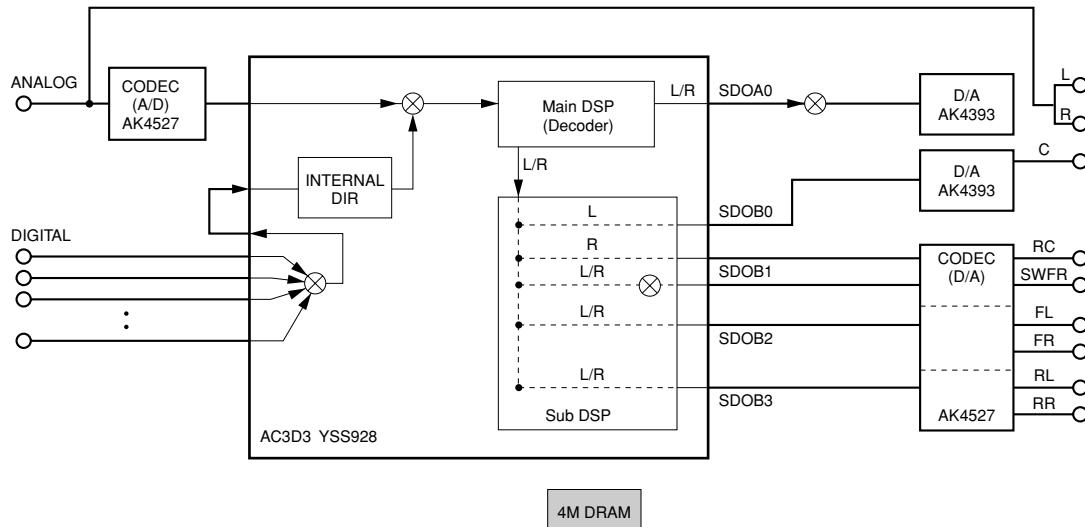

Center: -6dBFS, Rear Center: -3dBFS, FL/FR: -6dBFS, RL/RR: -12dBFS,
SWFR: Add L/R signal at -20dBFS.

SDOxx represents a terminal name of AC3D3.

The shaded square () means that the element included in it does not operate.

DSP 0dB [Remote control code: 7A-91 (PRG 10)]**1. DSP 0dB**

- C/R/C, FL/FR, RL/RR, SWF signals are output through DSP (see the signal path in the figure below) without using the external DRAM. (Head margin included)

Head margin:

Main L/R: 0dBFS, Center: -6dBFS, Rear Center: -3dBFS, FL/FR: -6dBFS, RL/RR: -12dBFS, SWFR: Add L/R signal at -20dBFS.

SDOxx represents a terminal name of AC3D3.

The shaded square () means that the element included in it does not operate.

DSP FULL BIT [Remote control code: 7A-92 (PRG 11)]**1. DSP FULL BIT**

- The signal is output in digital full bit without including the head margin.
- The same applies as "DSP 0dB" except that the digital data is output in full bit at D/A.
- However, the SWFR signal is not output in full bit.

Reference data (PRE OUT)

INPUT: DVD ANALOG

SWFR: 50Hz, Others: 1kHz

2. HP ROUTE (Headphone route)

There are 2 sub-menu items (HP 0dB and HP FULL BIT).

2. HP 0dB**HP 0dB** [REMOTE CONTROL CODE: 7A-93 (PRG 12)]

- L/R, C/RC, FL/FR, RL/RR, SWFR signals are output through DSP (see the signal path in the figure below) without using the external DRAM. (Head margin included)
- SDOB3 output is input to Main L/R DAC. Other than that, everything is the same as DSP THROUGH.

Head margin:

Main L/R: -18dBFS, Center: -6dBFS, Rear Center: -3dBFS, FL/FR: -6dBFS,
RL/RR: -18dBFS, SWFR: Add L/R signal at -20dBFS.

2. HP FULL BIT

HP FULL BIT [Remote control code: 7A-10 (PRESET+)]

- The signal is output in digital full bit without including the head margin.
 - The same applies as “HP 0dB” except that the digital data is output in full bit at D/A.
 - However, the SWFR signal is not output in full bit.

SDOxx represents a terminal name of AC3D3.

The shaded square () means that the element included in it does not operate.

5. SPEAKERS SET

The input signal is automatically identified in the order of dts → DOLBY DIGITAL → PCM → Analog.

There are five sub-menu items as follows. The signals output from the DSP block are the same as 1. DSP THROUGH: DSP 0dB.

The analog switch settings for each sub-menu are as shown in the table below.

	Sub-menu	CENTER SP	REAR SP	MAIN SP	MAIN LVL	LFE/BASS
1	MAIN:SMALL 0dB	LARGE	LARGE	SMALL	0dB	SWFR

6. DISPLAY CHECK

This program is used to check the FL display section. The display condition varies as shown below according to the sub-menu operation. The signals are processed using EFFECT OFF (The L/R signal is output using ANALOG MAIN BYPASS.) The video signal internal/external synchronization switching is controlled by the microprocessor. When the initial message is displayed and all the FL segments light up, it is switched to the internal synchronization but other than that it is forced to the external synchronization setting.

Also, except for the initial display, 128 pictographs for checking the OSD driver are used for the video signal output display.

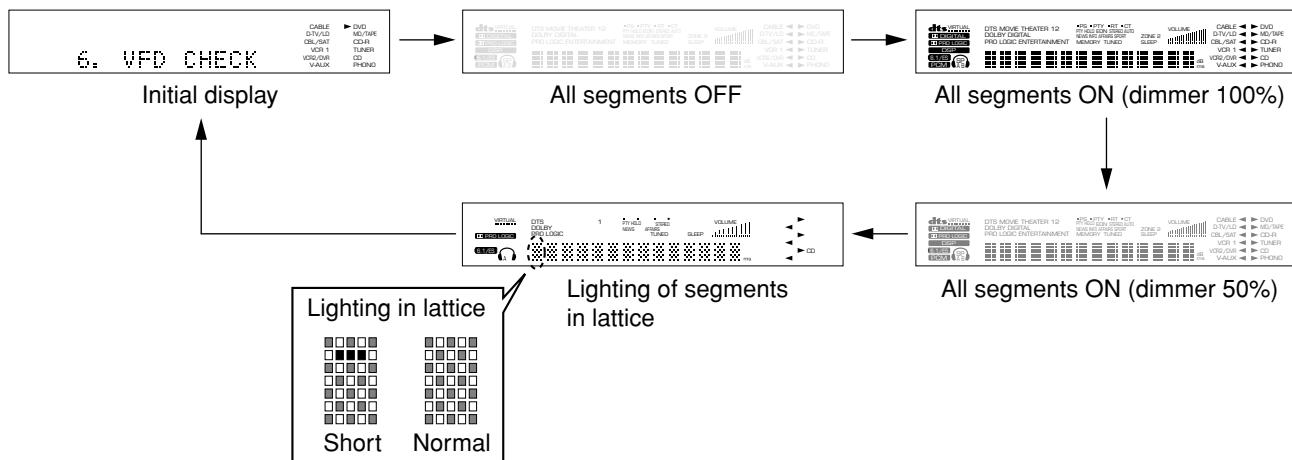

Reference data (PRE OUT)

INPUT: DVD ANALOG

SWFR: 50Hz, Others: 1kHz

Condition	CENTER	REAR C	FL/FR	RL/RR	SWFR
Both ch, -20 dBV, volume -10 dB	—	—	-13.5 dBV	—	—

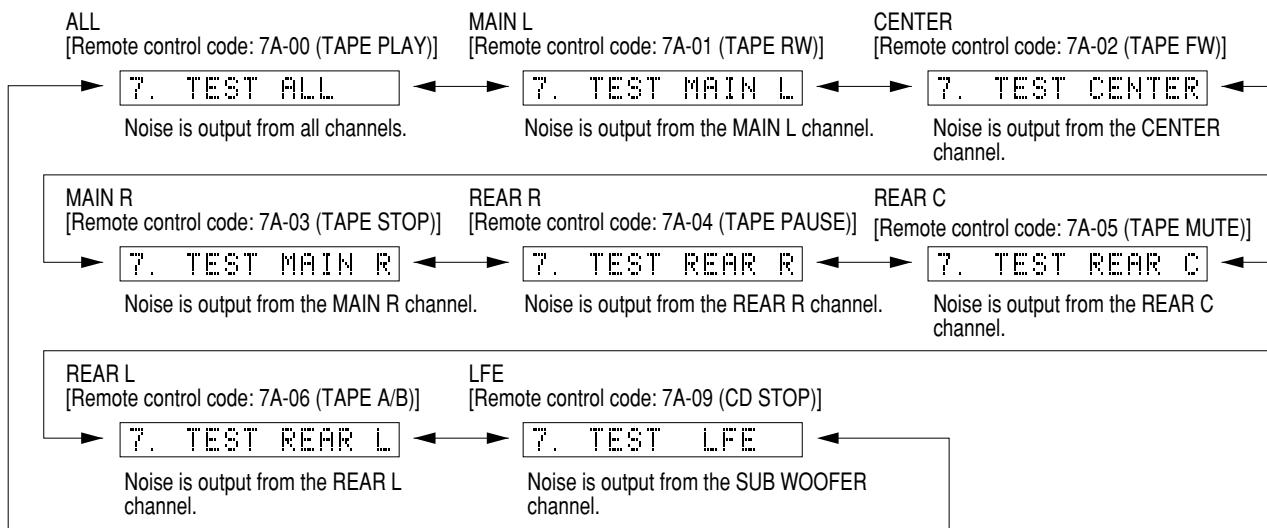

[Remote control code: 7A-8F (PRG 8)]

Segment conditions of the FL driver and the FL tube are checked by turning ON and OFF all segments. Next, the operation of the FL driver is checked by using the dimmer control. Then a short between segments next to each other is checked by turning ON and OFF all segments alternately (in lattice). (In the above example, the segments in the second row from the top are shorted.)

7. MANUAL TEST

The noise generator with a built-in DSP outputs the test noise through the channels specified by the sub-menu. The noise frequency for LFE is 35 to 250 Hz. Other than that, the center frequency is 800Hz.

8. RS-232C

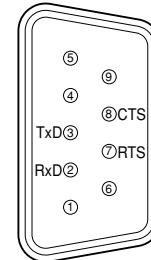

This menu is used to check transmission of the data and the flow port of the hardware.

With the power turned off, short between pins No.2 (RxD) and No.3 (TxD) and between pins No.7 (RTS) and No.8 (CTS) of the RS-232C terminal. (Be sure to turn off the power when shorting pins.)

Start DIAG and select the menu.

There are two sub-menu items.

The signals are processed using EFFECT OFF. (The L/R signals are output using ANALOG BYPASS setting.)

8. TxRx DATA : XX

TxRx DATA [Remote control code: -]

This sub-menu is used to check transmission of the test data. "OK" appears when the data is transmitted properly and "NG" when it is not.

In this mode, NULL command transmission is continued after the test command is transmitted.

8. HARD FLOW : XX

HARD FLOW [Remote control code: -]

This sub-menu is used to check operation of the flow port of the hardware. "OK" appears when the check result is satisfactory and "NG" when it is not.

9. PRESET

This menu is used to reserve and inhibit initialization of the back-up RAM. The signals are processed using EFFECT OFF. (The L/R signal is output using ANALOG MAIN BYPASS.)

9. PRESET INHI

PRESET INHIBIT (Initialization inhibited) [REMOTE CONTROL CODE: -]

RAM initialization is not executed. Select this sub-menu to protect the values set by the user.

9. PRESET RSRV

PRESET RESERVED (Initialization reserved) [REMOTE CONTROL CODE: 7A-57 (SLEEP)]

Initialization of the back-up RAM is reserved. (Actually, initialization is executed next time when the power is turned on.) Select this sub-menu to reset when shipped out of the factory or to reset RAM.

CAUTION: Before setting to the PRESET RESERVED, write down the existing preset memory content of the Tuner in a table as shown below. (This is because setting to the PRESET RESERVED will cause the user memory content to be erased.)

10. AD DATA CHECK

This menu is used to display the A/D conversion value of the main CPU which detects panel keys of the main unit and protection functions in % using the sub-menu. (Reference voltage 5V as 100%) During signal processing, the condition before execution is maintained.

When in K0/K1 page, it is not possible to operate the keys of the main unit because the values of all keys are detected. But one click on the volume encoder of the main unit to the right or left will cancel this function and sets to the next sub-menu. Note, however, that clicking there more than once would change the DIAG menu. In such a case, return to the DIAG menu which has been used for measurement. During signal processing, the condition before execution of this menu is maintained.

REC-OUT : 085

REC OUT (Select position) [Remote control code: -]

Refer to table 1.

K0/K1 (Panel key of main unit) [Remote control code: -]

A/D of the key fails to function properly when the standard value is deviated by $\pm 4\%$. In this case, check the constant of partial pressure resistor, solder condition, etc. Refer to table 2.

11. IF STATUS (Input function status)

Using the sub-menu, the status data is displayed one after another in the hexadecimal notation.

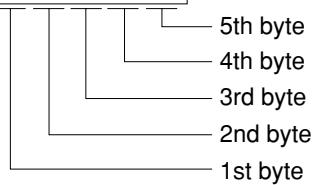

During signal processing, the status before execution of this menu is maintained.

12. DSP RAM CHECK

This menu is used to self-diagnose whether or not bus connection of YSS928 (IC501) and the external RAM (IC502) is made properly.

During signal processing, the status before execution of this menu is maintained.

Bus Check : NoEr

Bus Check [Remote control code: 7A-0A (CD SKIP+)]

The address bus and the data bus are checked and the connection condition is displayed.

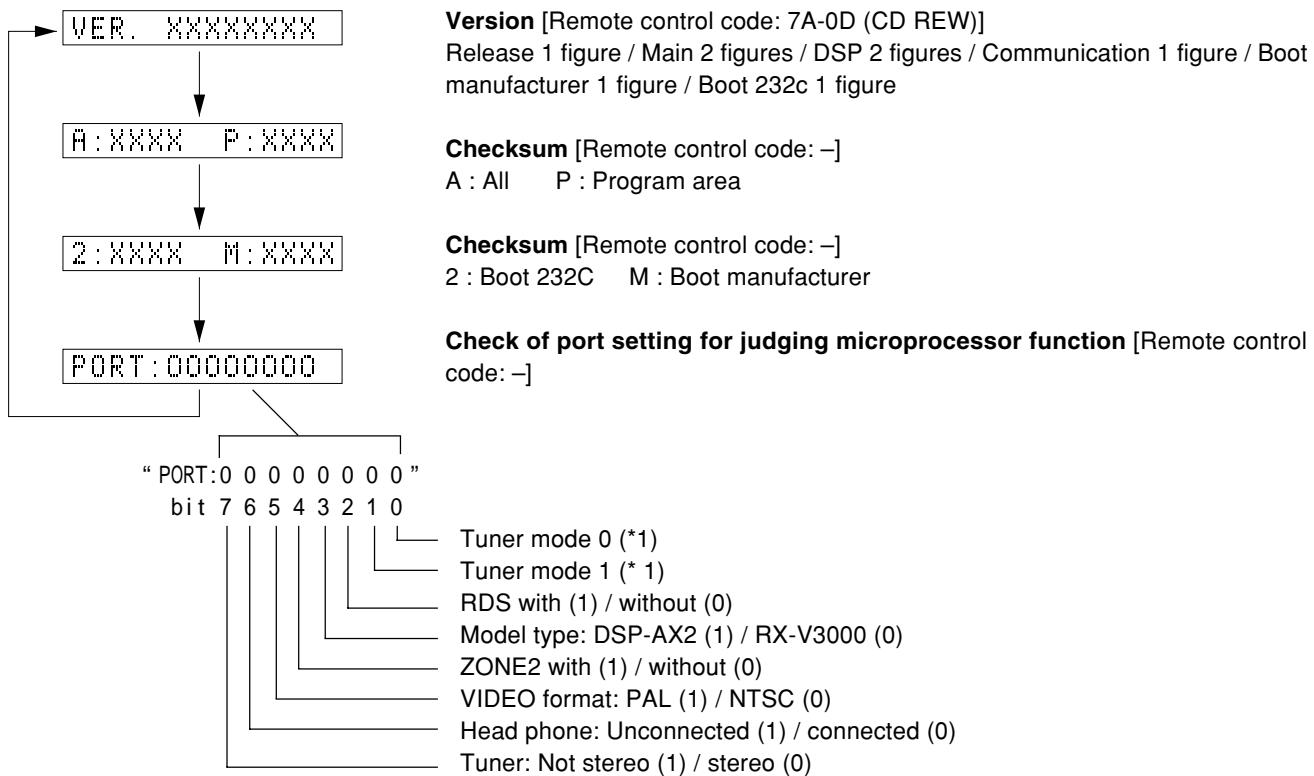

When no error is detected, "NoEr" appears on display.

Display	Description
WAIT	Bus being checked.
NoEr	No error detected.
DATA	Data bus shorted or open.
ADDR	Address bus shorted or open.

13. MICROPROCESSOR INFORMATION

There are 4 sub-menu display.

The version, checksum and the port specified by the microprocessor are displayed. The signal is processed using EFFECT OFF. The checksum is obtained by adding the data at every 16 bits for each program area and expressing the result as a 4-figure hexadecimal data.

Sound Interruptions During Playback of DVD

SYMPTOM: The sound is interrupted momentarily while playing Dolby Digital and DTS DVD's using the digital connection. This does not affect the picture, however the sound does not return even if the DVD is returned to the point where the sound interruption originally occurred. Note that this symptom occurs very rarely.

CAUSE: The sound interruption is caused by the tolerance in characteristics of the YSS928 (AC3D3) IC and only at the 48kHz sampling frequency.

SOLUTION: The tolerance in characteristics of the YSS928 can be eliminated by changing the program in the flash ROM. There are two methods to change the program. One is to replace the flash ROM and the other is to rewrite the program in the flash ROM through an external personal computer. When using the latter method, connect a personal computer to the RS232C terminal on the rear panel of this unit. The program data and the application software can be downloaded from the Yamaha AV Service Information System Home Page.

ON/OFF of TV Power Supply Changes Amplifier VR to Extremes

SYMPTOM: When the main power of the TV set is turned ON and OFF, the sound volume of the amplifier varies to the maximum or minimum level by itself. In the worst case, the excessive sound volume can even damage the speakers.

CAUSE: If the center speaker is placed on top of the TV set, electromagnetic noise emitted when the power supply to the TV set is turned ON and OFF enters the amplifier through the center speaker cable and then into the IC for VR as an error data. (At this time, the microprocessor is operating normally.)

SOLUTION: Add diodes between the digital type ground and analog type ground so that noise will not detour.
Add 2 diodes 1SS133 between MG and E on the function circuit board in the reverse phase as shown in the photograph. (MG line of microprocessor IC526 between VSS pins 41 and 57.)

MG: Microprocessor ground (digital)
E: Audio ground (analog)

Introduction of IC702 SMD (Surface Mounted Device) type

PURPOSE: The IC702 (TC74HC405) mounted on the Video (2) P.C.B. has been changed to the SMD (Surface Mounted Device) type (TC74HC4051AF) in the middle of its production. As they are different in shape, check the shape of the one being used for identification when placing an order. They are not interchangeable.

Introduction of Backup Capacitor with Longer Service Life

- SYMPTOM:** The power cannot be turned on, or the protection circuit is activated to turn off the power.
- CAUSE:** Fluid leakage occurs from the backup capacitor C633 0.047F 5.5V (C662 in the case of RX-V3000/DSP-AX2) on the Function PCB and causes a short with the adjacent components and between patterns, resulting in operation of the protection circuit. Fluid leakage tends to occur with this capacitor particularly with high internal cabinet temperatures, with or without the power on. Often, the leakage is only visible with very careful inspection.
- SOLUTION:** Two types of backup capacitors are now available with a longer expected service life. When servicing, thoroughly clean the leaked fluid from the PCB and from under any nearby components before replacing the capacitor. There are models other than those mentioned above that use the subject backup capacitor. Check them for fluid leakage and replace the capacitor as needed.
